COOLANT NOZZLES

ov-W11040-A-T-W10940-A-T-horizontal-clamping-rnh - Updated - 13-10-2022

What Flow Rate of Coolant is Required?

Choose a nozzle with an orifice size that matches your pump's capacity.

Select an orifice size too big and coolant pressure will drop off, an orifice size too small and an inadequate amount of coolant will reach the tool tip and can result in damage.

Note: Flow rates are based on water at 20°. Actual results may vary with fluid type, extension length and aiming angle.

System pressure (bar)	0.35	0.7	1.4	2.0	2.8	4.1	5.5
Orifice diameter (mm)	Flow rate (litres/minute)						
1.02	0.32	0.45	0.64	0.77	0.91	1.18	1.41
1.57	0.86	1.14	1.68	2	2.32	2.82	3.32
2.18	1.64	2.32	3.27	3.86	4.55	5.46	6.82
2.79	2.91	4.09	6.36	7.27	8.18	10	11.37
4.06	6.36	9.09	12.73	15.91	18.18	21.82	25.46
5.59	11.37	16.82	23.64	30.46	35.46	42.28	48.19
System pressure (bar)	6.9	10.3	13.8	20.7	34.5	69.0	103.5
Orifice diameter (mm)	Flow rate (litres/minute)						
1.02	1.59	1.86	2.09	2.77	4	5.46	6.36
1.57	3.64	4.55	5.46	6.82	9.55	13.64	17.28
2.18	7.73	9.09	10.46	12.73	16.82	23.64	28.64
2.79	14.09	16.37	18.64	23.64	29.55	40.46	49.55
4.06	28.19	34.55	41.37	49.1	63.65	90.01	110.47
5.59	53.64	65.46	75.01	89.1	114.56	161.39	197.75

Calculating Coolant Velocity

To calculate the average coolant exit velocity (important in some grinding operations where it is often desirable to match or exceed the peripheral velocity of the wheel) refer to the formula below. Choose an orifice size that produces sufficient back pressure to achieve the desired velocity.

$$V = \frac{(17.11 \times 10^{-5}) \times F}{(d \times 10^{-3})^2}$$

Where;

V = Velocity in m/s

C = Constant of 17.11 x 10⁻⁵

F = Flow rate through orifice in litres/min (see table above)

d = Orifice diameter (mm) from product tables

Nozzle Extensions

Choose a nozzle extension that suits your application. Short projections are more compact and less likely to be knocked out of position by swarf or vibration. Longer extensions are easier to aim, produce a more streamline or laminar flow and shoot further.

A Word About Coolant Pumps

The most common coolant pump on CNC machine tools is a single stage centrifugal pump, normally designed to move high volumes of water at low pressure (typically 0.2 to 1.4 bar). Multi-stage centrifugal pumps are capable of higher pressures (typically 1.4 to 14 bar) while still producing high flow rates. Positive displacement pumps are used for very high pressure applications up to 140 bar and are generally used with small diameter orifices due to their lower flow rates.

An extremely versatile system with an incredible range of motion in each joint – 72° either side of centreline! It's compact design is ideal for tight spaces. Available with fixed or variable flow nozzles and interchangeable orifices rated to 6.7 bar maximum and available with threaded or spherical bases. Vibration resistant joints provide superior reliability in CNC lathe turrets where inertial forces are high.

Variations

Links swivel 72° either side of centreline enabling it to come full circle within a 45mm inscribed circle.

Applications

The Swival Max coolant nozzle system with fixed flow end nozzles is ideal for CNC lathes due to its compactness and flexibility.

Variable flow end nozzles enable infinite flow control from full shutoff to full flow with fingertip control. They are ideal for manual and CNC mills.

An extremely versatile coolant nozzle system compatible with new and existing installations.

Build your flexible system for your application.

Base

20051 - Brass Base Element
For plain bore and screw location.

OR

20052 - Acetal Base Element
For easy screw in fixing.

Intermediate Links for Maximum Extension and Reach

20053.W0010 - Standard Swivel Max Extension Links

OR

20053.W0120 - Connect from Swivel Max to LocLine.

OR

20053.W0130 - Connect from Swivel Max to SnapLoc.

Alternative Option

Alternatively, connect from either LocLine or SnapLoc to our in-expensive and versatile swivel Max System.

Coolant Nozzles - Black Eye

max. 10 bar

Coolant Nozzles

20000

COOLANT NOZZLES

Material

Body: acetal.
Ball: stainless steel.

Technical Notes

Max. temperature 70°C.
Max. pressure 10 bar.
symbola/symbol is an angle of adjustment

either side of centre line.
For extension tubes see part nos. 20090 and 20092.
For spray tips see part nos. 20080 and 20082.

Tips

Easy to aim replacement for basic spherical

coolant nozzles. Install, lock in place then aim the stainless steel ball with the tip of a hex key.

Choose tapped version if you need to use with extension tubes or if occasional plugging of unit is required (set screw included).

20016

Material

Body: acetal.
Ball: stainless steel.

Technical Notes

Max. temperature 70°C.
Max. pressure 10 bar.
symbol α /symbol is an angle of adjustment either side of centre line.

For extension tubes see part nos. 20090 and 20092.

For spray tips see part nos. 20080 and 20082.

Tips

Converts any NPT or BSPT hole to a fully adjustable nozzle.

Easy adjustment.

Choose large orifice for maximum flow and smaller orifices when using multiple nozzles.

Choose tapped tube if the nozzles needs to be plugged (set screw included).

20100

Material

Body: brass or stainless steel.
Ball and tube: stainless steel.

Technical Notes

Max. temperature: 70°C.
Max. pressure: 100 bar.
symbol α /symbol is an angle of adjustment either side of centre line.

Choose the stainless steel body version when using cutting oils not compatible with brass (such as oils containing active sulphur).

Choose the brass versions for lower cost.

Tips

Interchangeable spray tips available allowing the orifice diameter and extension

length to be easily changed to suit the application.

A high velocity coolant stream increases productivity and tool life.

Also useful for low pressure applications where abrasive swarf can be a problem.

COOLANT NOZZLES

20103

Material

Stainless steel body, ball and tube.

Technical Notes

Max. temperature: 70°C.

Max. pressure: 100 bar.

symbol/alpha is an angle of adjustment

either side of centre line.

Tips

Interchangeable spray tips available allowing the orifice diameter and extension length to be easily changed to suit the application.

A high velocity coolant stream increases productivity and tool life.

Also useful for low pressure applications where abrasive swarf can be a problem.

Pressure Max - Spray Tips

max. 100 bar

Coolant Nozzles

20104

COOLANT NOZZLES

Material

Body: brass or stainless steel.
Ball and tube: stainless steel.

Technical Notes

Max. temperature: 70°C.
Max. pressure: 100 bar.
symbol α /symbol is an angle of adjustment either side of centre line.
Choose the stainless steel body version

when using cutting oils not compatible with brass (such as oils containing active sulphur).
Choose the brass versions for lower cost.

Tips

Interchangeable spray tips available allowing the orifice diameter and extension

length to be easily changed to suit the application.
A high velocity coolant stream increases productivity and tool life.
Also useful for low pressure applications where abrasive swarf can be a problem.

Port Adaptors - Press Fit

high pressure - max. 100 bar

Coolant Nozzles

20107

COOLANT NOZZLES

Material

Brass.

Technical Notes

Max. temperature: 150°C.

Max. pressure: 100 bar.

Converts low pressure screwball type parts to high pressure fixed, threaded parts.

Hole tolerance for d_2 H9.

Order No.	d_1	d_2	l_1	l_2

20108

Material

Body and nut: brass.
 Ball and extension: stainless steel.
 152,4mm long tubes brass/copper.

Technical Notes

Max. temperature: 150°C.

Max. pressure: 100 bar.
 symbola/symbol is an angle of adjustment either side of centre line.
 These units fit both NPT and BSPT ports.
 Through tightening of nut A/F₂ these nozzles can be locked in position. Ideal for

applications where the nozzles could be knocked out of position.

Tips

The balls and tube are easily interchangeable - see part no. 20109 for replacement balls and tubes.

20093

Material

Brass.

Technical Notes

Max. temperature: 70°C.

Max. pressure: 33 bar.

Tips

Sweat fittings allow a wide variety of coolant nozzles to be mounted to copper tubing, increasing reliability through use of short rigid hose. For use with coolant

nozzles 20056, 20080, 20082, 20104 and 20106. See table for compatibility. Easy to solder.

Threaded Insert - Metric - Inch heavy duty - carbon steel

Threaded Inserts

22010

THREADED INSERTS

Material

Inserts: carbon steel (C1215) or equivalent. Zinc phosphate.

Keys: stainless steel (302 CRES) or equivalent. Passivated.

Technical Notes

General tolerances:

± 0,010" unless specified.

Tap drill hole tolerances:

0,234 to 0,500 = +0,004/-0,001".

0,500 and over = +0,005/-0,001".

Tips

Order installation tool separately, as identified by „Inst. tool ref.“ in table.

Important Notes

Four locking keys on internal threads M8 and over. Two locking keys on internal

threads smaller than M8.

Installation (Inst.) drill size, countersink, thread tap and thread depth as specified in table.

Removal drill size and drill depth as specified in table.

Internal thread in metric. External thread in inches.

Threaded inserts are used to quickly repair stripped, damaged or worn out threads with new stronger threads, or are used in original equipment to guarantee stronger thread connections.

Wixroyd inserts are easy to install and remove, without the need for special drills, taps or pre-winder tools. The 'locking keys' on threaded inserts are easily driven down into the thread of the surrounding base material – locking the insert securely in place.

Carbon steel inserts

Stainless steel inserts

Solid inserts

Key Features

- Solid, one-piece construction providing high pull-out strengths.
- Locking "keys" provide a positive mechanical lock against rotation of the insert.
- Easy installation and removal.
- Installation with standard drills and taps.
- No pre-winder tools required.
- No tangs to break off and account for in the assembly.
- For use in a wide variety of materials.
- Both metric and imperial sizes available in coarse and fine pitches.

Installation and Removal

- 1 Select desired threaded insert, and from the product data table identify the installation drill and tap sizes (note the drill is slightly oversized deliberately). Drill with standard tap drill as per product data table, and countersink with standard 82-100° countersink.
- 2 Tap new threads with standard tap – as specified in product data table.
- 3 Screw in the insert until it is 0.25 to 0.75mm (0.010 to 0.030 inch) below the surface.
- 4 Drive locking keys down with several hammer taps on the installation tool – see product data table for correct tool.
- 5 Insert is installed.

Installation

Wixroyd threaded inserts, can be removed (if required) without damage to the surrounding material.

- 1 Refer to product data tables to identify the drill size and drill depth required for removal. Drill out the material between the insert keys and the internal thread to specified depth.

- 2 Bend the locking keys inward and break off.
- 3 Remove the old insert using a screw extractor.
- 4 Install a replacement insert into the original tapped hole.

Removal

Stainless Steel

22054

Material

Steel, blackened.

Tips

For use with inch thinwall threaded

inserts 22020 and 22030. Select installation tool of corresponding insert internal thread d_1 and external thread d_2 . If in doubt refer to data tables of insert where

correct „Inst. tool ref.“ is stated.

Order No.	For insert of internal thread = d_1	For insert of external thread = d_2

Installation Tool - Solid - Metric

for threaded inserts 22040 & 22042

Threaded Inserts

22052

THREADED INSERTS

Material

Steel, blackened.

Tips

For use with metric solid inserts 22040

and 22042.

Select installation tool of corresponding insert external thread d_1 . If in doubt refer to data tables of insert where correct „Inst.

tool ref.“ is stated.

Order No.	For insert of external thread = d_1	Thread type d_1
22052.W0210	M 8x1,25	Coarse

22052.W0320	M33x2,00	Non-Std

22060

Material

Steel, blackened.

Tips

For use with metric thinwall threaded

inserts 22000 and 22004.

Select installation tool of corresponding insert internal thread d_1 and external thread d_2 . If in doubt refer to data tables of

insert where correct „Inst. tool ref.“ is stated.

Order No.	For insert of internal thread = d_1	For insert of external thread = d_2

Threaded Insert - Solid - Metric

carbon steel

Threaded Inserts

22040

THREADED INSERTS

Material

Inserts: carbon steel (C1215) or equivalent. Zinc phosphate.

Keys: stainless steel (302 CRES) or equivalent. Passivated.

Technical Notes

General tolerances:

± 0,25" unless specified.

Tap drill hole tolerances:

6,9 to 10,8 = +0,10/-0,025".

12,8 and over = +0,13/-0,025".

Tips

Order installation tool separately, as identified by „Inst. tool ref.“ in table.

Important Notes

Four locking keys on external threads M12 and over. Two locking keys on external

threads smaller than M12.

Installation (Inst.) drill size, countersink, thread tap and thread depth as specified in table.

Removal drill size and drill depth as specified in table.

External metric thread allows you to machine your internal thread.

SWING BOLTS

18820

Material

Steel, heat-treated steel, blackened, quality thread 8.8.
 Rolled thread, shaft \varnothing = roll \varnothing , faces machined.

Important Notes

These parts offer a high precision bore d_2 to tolerance H7, with faces w_1 machined flat.

Technical Notes

Produced to DIN 444B.

For similar DIN 444 swing bolts for a standard tolerance see our part 18822.

Swing Bolts - Overview

Swing Bolts - High Tolerance

18820

- Form B - DIN 444.
- Heat-treated steel, quality 8.8, blackened.
- Rolled thread, shaft \varnothing = thread \varnothing , faces machined.
- These parts offer a high precision bore d_2 to tolerance H7, with faces 'w₁' machined flat.

Swing Bolts - Standard Tolerance

18822

- Form B, DIN 444.
- Heat-treated steel, tempered, quality 8.8, black
- These parts have a bore d_2 with a standard tolerance H9 (faces 'w₁' are not machined).

Stainless Swing Bolts - High Tolerance

18830

- DIN 444.
- Stainless steel 1.4305 (AISI 304). Turned, thread rolled. Matt shot blasted.
- These parts offer a high precision bore d_2 to tolerance H7, with faces 'w₁' machined flat.

Stainless Swing Bolts - Standard Tolerance

18832

- DIN 444.
- Stainless steel 1.4301.
- These parts have a bore d_2 with a standard tolerance H9 (faces 'w₁' are not machined).

SWING BOLTS

18822

Material

Steel, heat-treated and tempered, quality 8.8, black.

Technical Notes

DIN 444.

Important Notes

These parts have a bore d_2 standard tolerance H9 (faces are not machined).

For similar parts to DIN 444 with high tolerance see our part 18820.

18830

Material

Turned, thread rolled. Matt shot blasted.

Technical Notes

Produced to DIN 444.

Stainless steel 1.4305 (AISI 304).

Important Notes

These parts offer a high precision bore d_2 to tolerance H7, with faces w_1 machined flat.

For similar DIN 444 swing bolts to a standard tolerance see our part 18832.

Nuts

Available in heat treated steel, unless stated otherwise.

24000 T-Nut, Strength Class 10 DIN 508.

24010 T-Nut with Anti-Slip Device.

24100 Extended T-Nut. Strength Class 10.

24120 Rhombus T-Nuts

24300 Fixture Nuts. Strength Class 10 - DIN 6330B

24400 Collar Nuts, DIN 6331

24502 Fast Nut - With Collar Rapid Assembly Nut

24520 - Steel Slip-On Lock Nuts - Rapid Assembly Nut.

24600 Extension Nuts Strength Class 10.

24620 Swivel Nuts, Conical Seat

Washers

Available in a range of steel types - see product for details.

25000 - Hardened Steel - Plain Washers. DIN 6340.

25100 - Case Hardened Steel - Spherical Seat Washers. Type C - DIN 6319C.

25400 - Case Hardened Steel - Dished Washers, Type D - DIN 6319D.

25700 - Tempered Steel - Dished Washers, Type G - DIN 6319G.

25900 - Stainless Steel Compact Spherical Washer, Conical Seat, similar to DIN6319

T-Nuts

steel - strength class 10

24000

T-NUTS & T-BOLTS

Material

Steel, heat-treated, to tensile strength class 10.

Technical Notes

T-nuts to DIN 508.

Further T-nut sizes and qualities on request.

Please note T-nuts are square, length and width are both equal to dimension w_2 .

Important Notes

Full load capacity of T-nut can only be achieved if 100% of T-nut's thread is in use.

T-Nuts with anti-slip device

T-Nuts & T-Bolts

24010

T-NUTS & T-BOLTS

Material

Steel, heat-treated, quality 10, black.
Spring element: stainless steel.

Technical Notes

The spring element prevents horizontal and vertical slipping of T-nut. Please note

T-nuts are square, length and width are both equal to dimension w_2 .

24120

T-NUTS & T-BOLTS

Material

Steel, heat-treated.

Technical Notes

Can be fitted into T-slots from above.

Tips

Very useful on long T-slots or where work-piece layout prohibits the introduction of bolts or nuts from the end of the T-slot.

Keep slots clean to ensure accurate fit.

Order No.	d ₁ x T-Slot	Strength class	w ₁	w ₂	h ₁	h ₂	Weight g

24160

Material

Carbon steel, 0,35 - 0,45%C.

Technical Notes

DIN 508.

After machining thread, heat treat to

tensile strength class 10. Heat to 880°C for 45 minutes, quench in oil at 75°C and temper at 550°C for two hours.

Please note T-nuts are square, length and width are both equal to dimension w_2 .

Tips

Useful for machining unusual thread sizes or imperial threads.

T-NUTS & T-BOLTS

21050

Material

Forged steel, rolled threads.
T-slot guide faces milled.
Strength class 12.9 punched into head.

Tips

For use where higher clamping forces are required. The T-nut element of all T-slot bolts are square, the dimension of which is

represented by w_2 .

21060

Material

Forged steel, rolled thread, heat-treated.

Technical Notes

Tensile strength 8,8.

Tips

This unique T-slot bolt combines the integral strength of a one piece T-bolt, with the functionality of a rhombus type nut to

provide access to T-slots where workpiece layout prohibits the introduction of standard T-slot bolts no. 21000.

26502

Material

Aluminium with rubber O-ring.

Technical Notes

An O-ring holds the aluminium plug in place in the bore hole. The plugs do not

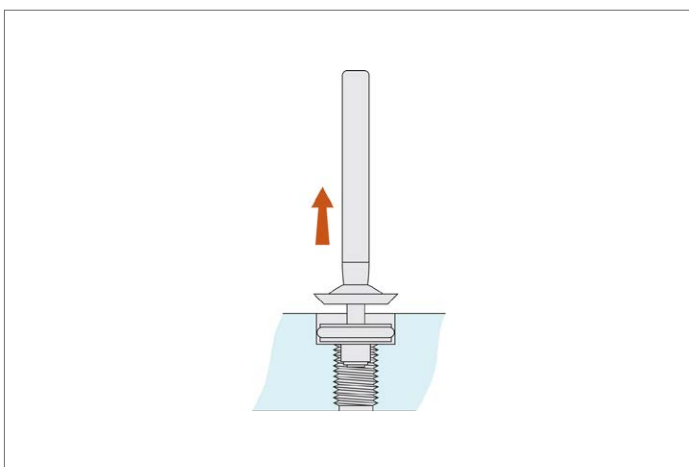

protrude above the table and so can remain installed when using clamps, vices etc.

They are easily installed and removed using the assembly tool.

Tips

Allows machine table areas to be kept clean of dirt, swarf and lubricant.

Set Collar stainless steel

Set Collars

38600

SET COLLARS

Material

Stainless steel (AISI 303, 1.4305).

Technical Notes

Grub/set screw fitted and is supplied with the set collar. The screw has a hex drive.

38620

Material

Steel type:

Steel, black, steam oxidized.

Stainless steel type:

Stainless steel (AISI 316, 1.4404).

Technical Notes

Slotted set collars with strong clamping

force. Universal applicability: e.g as a fixed collar. stop. The stainless steel type is extremely resistant to corrosive environments. Also available in divided finish - see part no. 38624.

Dimension s_1 indicates the max. stroke or movement of d_2 during tightening of the

38650

Material

Set collar and screw: stainless steel (AISI 420, 1.4021).

Technical Notes

Clamping ring made of stainless steel with

strong clamping force. Available in two versions, slotted (one piece) and divided (two piece). Clamping rings with $d_1 > 10\text{mm}$ supplied with fixing hole (d_3) for the mounting of sensors, switches etc.

24600

Material

Steel heat-treated.
Tensile strength class 10.

Technical Notes

Produced to DIN 6334.

Used for joining T-bolts and studs together. For safety the T-bolts/studs should be screwed half the length of the coupling nut either side. Minimum screwed in thread length should be 1 x diameter.

Fast Nut - With Collar

rapid assembly nut

Nuts

24502

NUTS

Material

Steel, heat treated.

Technical Notes

For rapid mounting and dismounting of nuts over long or damaged studding, and

even a studding bent by up to 20°. Where nut components are held together and are unattachable - simply push over thread, engage and a quarter or half turn is adequate for locking.

Provides clamping similar to solid nuts of the same thread size. Time saving when dealing with long or damaged studding.

Order No.	d ₁	d ₂	w ₁	h ₁	h ₂	A/F	Weight g

Wixroyd Fast Nut

fast assembly nut, no loss of performance

24502 - 24504

Fixing Elements

The Fast Nut is quickly assembled, simply pull apart the segments to open - slide nut over thread to required location. Push the two threaded segments together to engage on thread. Lock the nut in place with a simple quarter to half turn of a standard spanner.

- There are no problems if the top of a threaded rod is damaged, the Fast Nut can slip over the damaged section.
- There are no issue of cross threading.
- Easy assembly in confined spaces.
- Flexibility to leave clamping to the last moment.

Quick Fastening

Ease the nut off a quarter turn with a spanner, unlock the Fast Nut and remove from the thread.

Disassembly

- For quick release and disassembly of the nut simply pull apart the nut casing to release.
- Zinc plated for a degree of rust protection.
- The Fast Nut simply slips over a rusted or paint covered thread to the fixing area.
- No issue of thread seizing.
- Time saving, yet just as high holding force!
- Can slip over damaged or bent studding up to an angle of approx. 20°.

Quick Release

- M6, M8, M10, M12, M16, M20, M24.

Available Sizes

- Construction industry.
- Temporary buildings, scaffolding.
- Automotive.
- Flange and instrument fittings.
- Jig and fixture builds.
- Mechanical applications.

Applications

- Up to 50% faster assembly and disassembly (up to 500% in difficult and confined environments).
- One piece, so individual parts can't be lost
- Maintenance free and re-usable.
- Corrosion resistant, ideal for outdoors.

Saving Time, Effort and Cost

- Two part construction, with parts retained (und detachable).
- Tempering and surface protection to DIN/ISO standards as for a normal nut.
- Thread interference up to 180% of a standard nut.
- No need for a special spanner.

Technical Data

- Heat treated steel, zinc plated.
- Strength class 10 = 1060 N/mm².
- Temperature resistant to +150°C.

Material

24520

Material

Steel, strength class 6, hardened and zinc plated.
Coarse thread.

Technical Notes

Avoid time consuming winding & unwinding

on long threads and overcome issues of damaging threads. The slip-on lock nut is easy to position at any point on a thread. Just open the lock nut, position where required, twist the lock nut closed and tighten with a spanner. Still with high load

forces. Safety factor of 2.5 times in load recommendations. Tested from 5 to 2000 Hz over a 10 minute period with no evidence of loosening.

WASHERS

Material

Steel, case-hardened.

Technical Notes

Produced to DIN 6319D.

Tips

Do not use no. 25400 (type D) for clamping over holes or slots which do not provide full surface contact to the washer. In such

cases use no. 25700 (type G). Dimensions marked * not available in DIN standard.

Washers - Spherical Seat stainless steel 303

Washers

25200

WASHERS

Material

Stainless steel (AISI 303, 1.4305), A2-70.

Technical Notes

Similar to DIN 6319C.

Used with dished washers no. 25500 (type

D), and no. 25800 (type G).

Tips

When clamping over holes or slots which do not provide full surface contact to the washer, only use no. 25200 in combination

with washer no. 25800 (type G)- do not use in combination with no. 25500 (type D) in such situations.

*Torques for screws A2-70 are approximate values.

Technical Notes

Pivots approximatively 45° from horizontal

in every direction.

Important Notes

For holding parts at an angle. Collar easily tightens on ball at variable angles.

Order No.	d ₁	d ₂	d ₃	d ₄	h ₁	Weight g

CMM Swivel Joint

M 8 threads

Gauging & Inspection

19358

GAUGING & INSPECTION

Technical Notes

Fully articulated adjustable stop, rotates in 360° in both horizontal, vertical plains. Fully XYZ adjustable.

Important Notes

Rotates from side-to-side and up and down. Arm extends and retracts. Rotating arm features thermoplastic cone for posi-

tioning a part without marring its surface.

Order No.	d ₁	l ₁	Weight g
19358.W0008	M 8	100	134

Wixroyd's CMM fixturing system is designed for easy assembly and high repeatability, eliminating the need to build dedicated fixtures. The system offers a highly accurate and flexible solution of holding parts while probing on CMMs.

Flexible

A variety of component parts as well as complete kits are available; to enable setup of fixtures in minutes.

- Aluminium base plates – hole based system with alpha-numeric labelling for easy set-up and recording of fixture positions.
- Fixture towers – ideal for fixturing of large vertical components.
- Soft-touch clamps – non-marking clamps providing the ideal force for holding parts during CMM probing.
- Locating components – rest pads, vee pads for cylindrical parts, pin rests etc.

Basic CMM Fixturing Set for M 8 threads

Gauging & Inspection

19310

GAUGING & INSPECTION

Technical Notes

Designed for clamping non-magnetic parts on CMM tables.

Important Notes

M 8 coarse thread. Basic set of workholding

components for fixturing of components on CMMs. Components are of lightweight materials: aluminium, plastic etc. to avoid damage to components. Supplied on wooden holder for easy and tidy storage.

For CMM fixturing plates and towers see 19300 and 19302.

Fixture Plates for CMMs

M 8 threads

Gauging & Inspection

19300

GAUGING & INSPECTION

Material

Aluminium, hard anodized (black).

Technical Notes

CMM fixture plates can be mounted to the

surface plate of your CMM by using step blocks and clamps or by drilling mounting holes into the plate which correspond to the inserts on your surface plate.

Tips

Soft touch clamps 19320 are perfect for clamping in CMM fixturing applications.

Order No.	l_1	d_1	w_1	p_1	h_1
19300.W3030	300	M 8	300	15	13

19300.W6060	600	M 8	600	15	19

30820.1

Material

High grade steel. Hardened 740 +HV10.
Hole, d₁ ground ISO tolerance F7.
o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.

Key to dimensions l₁:

- l₁ short
- l₁ medium
- l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm

- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm
- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order

Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:
i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.
i/d's 15,1mm and over -0,5mm increments.

Ordering drill bushes to DIN standard increments offers a cost advantage, as non-standard bores are machined to order as specials.

Headed Drill Bushes - DIN 172A

medium

Tenons, Locating Pads & Drill

30820.2

TENONS, LOCATING PADS & DRILL BUSHES

Material

High grade steel. Hardened 740 +HV10.
Hole, d₁ ground ISO tolerance F7.
o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.

Key to dimensions l₁:

- l₁ short
- l₁ medium
- l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm

- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm
- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order

Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:
i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.
i/d's 15,1mm and over -0,5mm increments.

Ordering drill bushes to DIN standard increments offers a cost advantage, as non-standard bores are machined to order as specials.

TENONS, LOCATING PADS & DRILL BUSHES

TENONS, LOCATING PADS & DRILL BUSHES

30820.3

Material

High grade steel. Hardened 740 +HV10.
Hole, d₁ ground ISO tolerance F7.
o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.

Key to dimensions l₁:

- l₁ short
- l₁ medium
- l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm

- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm
- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order

Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:
i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.
i/d's 15,1mm and over -0,5mm increments.

Ordering drill bushes to DIN standard increments offers a cost advantage, as non-standard bores are machined to order as specials.

TENONS, LOCATING PADS & DRILL BUSHES

30800.1

Material

High grade steel. Hardened 740 +HV10.
 Hole, d₁ ground ISO tolerance F7.
 o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.
 Key to dimensions l₁:
 - l₁ short
 - l₁ medium
 - l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm
- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm

- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order.
 Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:
 i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.
 i/d's 15,1mm and over -0,5mm increments.

TENONS, LOCATING PADS & DRILL BUSHES

30800.2

Material

High grade steel. Hardened 740 +HV10.
Hole, d₁ ground ISO tolerance F7.
o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.

Key to dimensions l₁:

- l₁ short
- l₁ medium
- l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm
- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm

- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order.

Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:

i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.

i/d's 15,1mm and over -0,5mm increments.

TENONS, LOCATING PADS & DRILL BUSHES

30800.3

Material

High grade steel. Hardened 740 +HV10.
Hole, d₁ ground ISO tolerance F7.
o/d-d₂ ground ISO tolerance n6, to fit standard hole tolerance H₇. Length l₁ to ±0,2 for lengths 6 to 30mm.

Technical Notes

d₁ dimension tolerance to F7.

Key to dimensions l₁:

- l₁ short
- l₁ medium
- l₁ long

Table of lengths l₁:

- A- 6mm
- B- 8mm
- C- 9mm
- D- 10mm
- E- 12mm
- F- 16mm
- H- 20mm
- J- 25mm
- K- 28mm
- L- 30mm
- M- 35mm
- N- 36mm
- P- 40mm
- R- 45mm
- S- 56mm

- T- 67mm
- W- 78mm

Tips

Sizes 48,0 i/d and above are made to order.

Please note sizes d₁ <0,9 prices available on request.

Important Notes

Drill bushes produced to standard DIN increments for internal bores:

i/d's 0,9mm to 15,0mm - 0,1mm increments e.g. 1,1 mm, 1,2mm etc.

i/d's 15,1mm and over -0,5mm increments.

TENONS, LOCATING PADS & DRILL BUSHES

30020

Material

Steel, case-hardened (C15), blackened and ground.

Technical Notes

Used for locating fixtures and clamping

elements onto machine tables.

Tips

For especially heavy duty applications we recommend tenons no. 30040.

Loose Slot Tenons for machine tool spindles

Tenons, Locating Pads & Drill

30040

TENONS, LOCATING PADS & DRILL BUSHES

Material

Steel, case-hardened (C15), blackened and ground.

Used for locating fixtures and clamping elements onto machine tables. Simply push into position after fixture or clamping element has been roughly positioned.

Technical Notes

Produced to DIN 6323.

30060

Material

Steel, case-hardened (C15), blackened and ground.

Technical Notes

Fixed type tenons, used in pairs, are

screwed onto the bases of vices and fixtures having standard slot sizes of 20mm. The tenon interfaces into machine T-slots of varying widths. For heavy fixtures use loose tenons no. 30040.

12030

Material

Steel (S7), heat-treated, black oxide.

Technical Notes

Installation instructions:

1. Set grip in Talongrip jaw, install with screws provided. For fixture, machine slot 0,025mm-0,075mm larger than dimension w_1 , drill and tap.
2. Torque screws to 6,1 Nm. for standard

cap screw and 3,3 Nm. for low head cap screw.

3. Tighten vice until penetration is felt. As a general rule, an additional 1/4-3/4 turn of vice handle is needed to secure the workpiece dependent on material type and vice model. Recommended penetration is 0,15mm-0,40mm.

Tips

M 5x12 screws provided, as well as 10-32x1/2". Either can be used in M 5 threaded holes as long as they do not exceed 25mm in length. The 10-32 screws sit better in the gripper rail and are less likely to bind during removal.

12031.1

LOW PROFILE SIDE CLAMPING

Material

Tool: steel (HRC 43-45) or brass.
Screw: steel and oil resistant nitrile rubber.
O-ring: plastic.

Technical Notes

Provides positive down force and a very low grip height. High vertical and horizontal clamping forces. The O-ring lifts the clamp when unclamping.
Hardness: approx. HRC 45.
Temperature range -30°C to +80°C.
Clamps sold by pack quantity.

Tips

The tool steel blunt edge is less likely to mark workpieces, whilst the knife edge version bites into the material for more aggressive machining requirements. Often used with 12034 Talongrip or 12036 Versagrip. Location rails are ideal for use with pitbull clamps.

Important Notes

1. Machine a slot for the Pitbull clamp in the fixture according to dimensions „w₁“ and „h₁“.

2. Drill and tap a fixing hole to match screw size- refer to dimension „l₁“ for distance of hole from the component.
3. Assemble clamp as shown in the diagram above.
4. Position the clamp, and loosely screw to fixture.
5. Load the component and tighten screw cap.
Dimension „h₂“ is the minimum recommended clamping height.

12031.2

LOW PROFILE SIDE CLAMPING

Technical Notes

Provides a hard barrier between pitbull clamp and fixture, preventing distortion of back wall when using aluminium or mild

steel fixtures.

Tips

To keep fixtures light, maintain full clamp

travel and holding forces at max. pressure. Refurbish old fixtures or add to existing aluminium fixtures to maximise machining capabilities.

Order No.	Screw	Part number	Qty/pack
12031.W0615	M 2,5	12031.W0005, 12031.W0010, 12031.W0015	8
12031.W0640	M 4	12031.W0020, 12031.W0030, 12031.W0040	8

12032

Material

Tool: steel, heat treated to HRc 43, machinable.

Screw: steel and oil resistant nitrile rubber.

O-ring: plastic.

Technical Notes

A machinable version of the standard pitbull clamps.

Provides positive down force and a very low grip height.

High vertical and horizontal clamping forces.

Hardness: approx. 45HRC

Tips

There is additional material of the clam-

ping face to allow machining of a radius.

Often used with part no. 12034 Talongrip or part no. 12036 Versagrip.

Important Notes

Installation:

1. Machine face of clamp to suit profile of component, taking note of dimension „s₁“ as the max. recommended stock removal. A dowel pin is included in each pack to locate the clamp whilst machining the face. After machining of face, remove pin and install O-ring to clamp workpiece.
2. Machine a slot for the pitbull clamp in the fixture, according to dimensions „l₂“ and „h₂“.
3. Drill and tap a fixing hole to match

screw size, refer to dimension „l₁“ for distance of hole from the component.

4. Assemble clamp as shown in the diagram above.

5. Position the clamp, and loosely screw to fix.

6. Load the component and tighten the cap screw.

Dimension „h₂“ is the minimum recommended clamping height.

Order No.	Qty/pack	d ₁	Stroke max.	h ₁	h ₂	h ₃	l ₁	l ₂	s ₁	Dowel pin dia.	Torque to Nm max.	Holding force kN	Weight g

LOW PROFILE SIDE CLAMPING

12033.1

Material

Body: steel hardened and ground with pitbull clamps insert (part no. 12031).

Technical Notes

Designed to be used in fixtures, on cubes etc.

The slotted version has a clamp step to support the workpiece off the machine table for through milling or drilling. The height of the clamp can be adjusted by varying the depth of the milled slot used to locate the clamp.

Tips

The compact version is ideal for clamping workpieces in series using the back surface of clamp to locate the next workpiece. Back of clamp is ground square to the bottom for precise part location.

Order No.	Body type	Clamp type	h_1	h_2 +0.000 -0.013	l_1	l_2	l_3	Stroke s_1	w_1	w_2	Torque to Nm max.	Clamping force kN max.	Mounting screw	Replacement clamps 12031	Weight g

12033.2

LOW PROFILE SIDE CLAMPING

Material

Hardened and ground steel bodies with pitbull clamps insert (part no. 12031).

Technical Notes

Designed to be used in fixtures, on cubes etc.

The slotted version has a clamp step to

support the workpiece off the machine table for through milling or drilling. The height of the clamp can be adjusted by varying the depth of the milled slot used to locate the clamp.

Tips

The compact version is ideal for clamping

workpieces in series, using the back surface of the clamp to locate the next workpiece.

Back of clamp is ground square to the bottom for precise part location.

Order No.	Clamp type	d ₁	h ₁	l ₁	l ₂	w ₁	Grip height	Replacement clamps

12130

Material

Channel: aluminium, anodised (7075-T6).
Wedge and screw: steel, hardened and blackened.

Technical Notes

Holds two parts with an equal clamping action. Very effective for multiple work-piece clamping. Can easily be used with hydraulic pull cylinders. Can be used to

clamp round bar, as long as centre line of clamp is above the centre line of the work-piece.

Tips

Clockwise rotation is recommended. The workpiece should be on the right of the clamp. For replacement cam screws see parts 12112.

Important Notes

Dimension w_2 is the distance needed between workpieces for clamp clearance. Drill and tap mounting hole on the centre of this dimension.
** a milled slot wider than d_1 will ensure the clamp remains in line with the work-piece. Clamp sides should not come into contact with slot walls during expansion.

Order No.	d_1	d_2	h_1	h_2	h_3	l_1	w_1	w_2	Spread max.	A/F	Torque to Nm max.	Qty/pack	Holding force kN	Weight g

12131

LOW PROFILE SIDE CLAMPING

Material

Channel: aluminium (7075-T6).

Wedge: steel.

Technical Notes

Standard length of 508mm supplied, to allow machining to your own requirements.

No drilled holes.

Important Notes

Dimension „w₃“ is distance needed between workpieces for clamp clearance. Drill and tap mounting hole on centre of this dimension.
 „*“ a milled slot wider than w₂ will ensure

clamp remains in line with workpiece. Clamp sides should not come into contact with slot wall during expansion. Channel and wedge supplied separately. If both parts are required please order them separately.

Order No.	Part	h ₁	h ₂	l ₁	w ₁	w ₂	w ₃	Spread max.

12140

Material

Channel: aluminium, anodised (7075-T6).
Wedge and screw: steel, hardened, blackened.

Technical Notes

Extra material on the clamp jaws can be machined away to suit the shape of your workpiece.
The specially designed steel wedge spreads

the clamp force uniformly across both sides of the clamp.

Tips

The locking plate should be used to machine the jaws, and removed after this process to enable workpiece clamping.
When the clamp is used to machine flat faced parts, use the locking plates to machine the faces parallel.

Full clamping cannot be achieved if locking plate has not been removed.

Important Notes

w_1 is the distance needed between workpieces for clamp clearance. Drill and tap mounting holes on the centre of this dimension.
 w_3 is the amount of machinable stock on the jaws.

Order No.	d_1	d_2	h_1	h_2	l_1	l_2	w_1	w_2	w_3	Torque to Nm max.	Holding force F kN	Weight g

Machinable Uniforce Clamps

long length

Low Profile Side Clamping

12145

LOW PROFILE SIDE CLAMPING

Material

Channel: aluminium, anodised (7075-T6).
Wedge: steel.

Technical Notes

The specially designed steel wedge spreads the clamp force uniformly across both sides of the clamp.
Channel supplied with 4 mounting screws.

Wedge supplied with 3 drive bolts.

Tips

Standard length of 190mm supplied to allow machining to your own requirements.

Important Notes

w_1 is the distance needed between work-

pieces for clamp clearance. Drill and tap mounting holes on the centre of this dimension.

w_3 is the amount of machinable stock on the jaws.

Channel and wedge supplied separately. If both parts are required please order them separately.

12010

Material

Stainless steel (17-4 PH, AISI 630).
Smooth faced jaws (34 HRC), serrated jaws (44 HRC).

Technical Notes

Very low profile, compact design, strong clamping. With smooth or serrated faces. The clamp jaw slides on an angle for positive downhold force - the down force is approx. 25% of the holding force.

The support surface of the clamp is wire-cut to ensure accurate positioning.

Tips

The support surface of the clamp can be installed flush with the fixture plate or raised to allow through drilling. Often used in conjunction with our Talongrips, part no. 12034.

Important Notes

1. Bore installation hole d_1 , with a centre-line at distance l_1 (tol. M8) from edge of workpiece.
2. Drill and tap „ d_2 “ to mount the clamp in the pocket.
3. Machine counterbore „ h_4 “ if recessing the clamp into the fixture.
4. Provide a back stop to locate the part.

12020

LOW PROFILE SIDE CLAMPING

Material

Steel, mild.

Technical Notes

Used to machine and hold irregular or round parts.

Dimension „w₂“ is the amount of machinable stock. Dimension „s₂“ is the distance to drill and tap hole from edge of workpiece to use flat face.

Tips

Suitable for holding flat, round or irregular shaped workpieces, the mild steel washer

can easily be machined to match the profile of a component.

Supplied with cam screws, and one machining screw to hold clamp during machining of clamp face to fit profile of the component.

Important Notes

1. Drill and tap hole in required location, refer to dimension „s₂“ if using the clamp flat face.
2. Clear drill 1,5mm deep.
3. Using the special machining screw

supplied (identifiable by NOT having a cam action), insert and tighten the steel washer.

4. Machine the washer to conform with profile of the workpiece.
5. Exchange the machining screw for a cam screw, load the component and clamp with cam screw.
6. CAUTION: Never assume clamp is tight, always check the tightened clamp prior to machining.

12111

LOW PROFILE SIDE CLAMPING

Material

Steel, hardened and blue zinc coated.

Technical Notes

Single piece clamping screw. Unique eccentric side profile of the clamp ensures

both downhold and side clamping action.

„ w_1 “ = max. distance from component when clamping above component surface.

„ w_2 “ = max. distance from component when clamping below component surface.

„ h “ - workpiece height.

„ l_3 “ - min. suggested thread engagement.

Clamping stroke achieved via 120° turn of clamping screw.

Order No.	d_1	d_2	l_1	l_2	l_3 min.	w_1	$w_2 \pm 0.2$	w_3	w_4	w_5	A/F	Torque to Nm max.	Holding force F kN	Weight g

A unique one-piece eccentric pull down clamping screw with compact design is an ideal solution for providing both pull down and side clamping forces in applications where space is limited. Our eccentric Pull Down Clamping Screw, uniquely combines a tapered cone and an offset eccentric thread to provide clamping above or below a component's surface.

Unique Solution

Advantages

- Durable, stable, compact design.
- Unaffected by swarf ingress.
- Easily actuated.
- Effective pull down and side thrust clamping.
- High clamping force.
- Small installation footprint, ideal for multi-component clamping.
- Low height clamping solution.

Installation

Clamping above component.

Clamping below component surface.

1. Drill and tap hole for required clamp size.
2. Install screw into the hole, and lower to the desired height of the component.
3. Ensure the flat side of the clamp is facing the workpiece - to allow for easy installation of component.
4. Once the clamping screw is installed, insert workpiece/ component.
5. Make a 120° turn of the screw to clamp the component.
6. A simple 120° reverse turn of the screw unclamps the component.

ultra low height clamping solution

multi-component clamping

Eccentric Fixture Clamps

low profile

Low Profile Side Clamping

12112

LOW PROFILE SIDE CLAMPING

Material

Hexagonal clamp: brass.
Screw: steel, hardened, strength class 10,9.

Technical Notes

Cam action provides fast, strong clamping.
Small size allows more parts per load.

Workpiece stop is on the right hand side of the clamp.

Tips

Clockwise rotation is recommended. The workpiece stop should be to the right of the clamp. Replacement cam screws are suitable for all clamp parts 12112, 12120,

12020 and 12150. For stainless steel version, see 12113.

Important Notes

w_1 - is the location to drill and tap from the edge of workpiece.

10920.W0130	Raised	7.5	2.5	10	5	14	6	15	25	20	M 6	8

10940

Material
Spring steel.

Technical Notes
Simple, very heavy-duty, low profile clamping. A quarter turn of the clamping screw generates up to 4000 N clamping force.

They have a swivel facility to allow clamping in any direction.

Tips
The clamps have unique „fingers“ that push the workpiece down before clamping - even on castings with a negative draft.

Important Notes
These clamps achieve a positive downforce on both faces of the workpiece when used in conjunction with fixed stop, part nos. 10900 or 10920.

ov-W10920-A-T-W10940-b-rmh - Updated - 20-10-2022

Mini finger clamps operate using our unique “three finger” clamping action – providing unmatched levels of pull down force and side clamping, for maximum component stability during machining.

With a height of less than 6mm and a length of just 20mm mini finger clamps are ideal for multi-component clamping, while maximising access of the tooling. The clamp body is made from spring steel and the eccentric and screw from heat-treated steel. For quick, precise and high clamping forces up to 4000 Newtons.

Actuation

The finger clamps pivot around an eccentric axis, with clamping via either a right (30°) or left (70°) actuation of the eccentric screw.

Clamping

Mini finger clamps can position as well as clamp the workpiece – putting pressure against the stops and pulling the workpiece onto the reference surface in one motion.

Often just a single mini clamp can achieve workpiece positioning and clamping against its stops.

Unique Action - "three finger" Clamping

Our horizontal clamps have a unique "three finger" arrangement ensuring components are both pulled down and clamped in the same motion. The face of the clamp is made of three parts or "fingers":

- Two outer flexible fingers ①; for pulling down the component to the work table.
- One solid central finger ②, to provide direct clamping action.

Available in two styles – smooth and serrated face. They can also cater for workpieces with an adverse angle on the clamping face – for example flame cut steel blanks.

Pull down AND clamp with the highest of clamping forces – from 0,4 tons to 2,2 tons!

Used in our clamping series:

10900, 10940, 10880, 10920, 11040, 11041, 11042, 11043, 11070, 11071, 11080, 11081, 11082, 11083

Clamping Action

The clamps outer flexible fingers ① are approx. 0,25mm longer than the solid central finger/clamping stop ②, this slight difference in length means it is the flexible fingers which first come into contact with the workpiece.

As initial contact is made with the work-piece the flexible fingers ① apply downward pressure forcing the workpiece down against the work table, the flexible fingers are compressed until they are the same length as the solid central finger/clamping stop ②.

Contact

As the solid central finger/clamping stop ② comes into contact with the work-piece it applies high side clamping pressure to achieve clamping forces up to 2,2 tons (dependent upon clamping model selected).

Clamping

During machining the uniquely designed flexible fingers ① continue to flex and twist applying downward pressure to keep the workpiece flat to the work table throughout.

Machining

Precision Positioning

The unique clamping action achieves precision positioning of workpieces – ensuring the workpiece remains parallel to the reference surface.

Unique Action - "three finger" Clamping

11040/41/42/43

22000N

11070/71

12000N

Quick 1/4 turn eccentric clamping – on models offering 4000 and 12000 Newtons clamping force.

Rear screw clamping – on models offering 6500, 10000 and 22000 Newtons clamping force.

Mounting

T-Slotted tables

Dedicated fixturing

Modular fixturing

Taper Clamps with downhold action

Low Profile Side Clamping

12430

LOW PROFILE SIDE CLAMPING

Material

Body: tool steel, hardened, bright.
Clamping segments: tool steel, hardened, ground and blackened.
Spring: steel, screw grade 12,9.

Technical Notes

Ideal for horizontal or vertical clamping of multiple parts. Tighten the socket head cap screw to move clamping segments outwards to press the workpiece(s) against a fixed stop. Can be mounted in a threaded

hole or T-slot.

„f*“ is the float around the clamping screw centre.

Tips

Double taper clamps provide higher clamping force.

Taper clamps with interchangeable jaws are ideal where short runs of different parts are required. Economies can be achieved through changing only the jaw, rather than the whole clamp.

Important Notes

Jaw Hardness-12430.W0008 to .W0116: 48-52 HRC.
12430.W0608 and .W0616: X=30-34, Y=48-52 HRC.
12430.W0508 to .W0516 and 12430.W808 to .W0816: 30-34 HRC.
Taper surfaces ground, for increased precision.

12450.W0008	Single	Smooth	27	31	M 8	15	2.5	29	21	1.0	25	44	55

Our low-profile taper clamps can be used on stand alone machines just as successfully as on large, flexible manufacturing systems. Working on the principle that, when tightened, they expand to simultaneously pull down and clamp the workpiece against stops, preventing any movement or play, they can produce clamping forces of up to 150 kN. With faces hardened to 48-52 HRC they are ideal for a range of clamping applications.

Operating Principle

When tightening the clamping screw, the clamp's tapers expand simultaneously, pushing components against the fixture stops as well as exerting a pull-down force, pulling components to the fixture base (double taper models only).

With excellent clamping forces of up to 150 kN, these clamps generate high enough forces for workpieces to be safely clamped.

Models Available

Single Taper

Providing horizontal clamping forces, holding workpieces solidly in place.

Single Taper Adapter Set

Single taper clamps can be adapted to perform as a double taper model. Simply invert your existing single taper models, fit our adapter set and clamp as normal.

Economy Model

When ultra precision and the highest clamping forces are not necessary, our economy models offer a cost-effective choice. Ground only on the bottom jaw of the clamp for a cost saving.

Stainless Steel

Designed with the demands of wire EDM clamping applications in mind.

Double Taper

Horizontal clamping and pull-down action, ensuring full contact of workpiece with fixture base.

Single Taper Clamps

small in size, yet big in clamping

Clamping & Height Setting

- Compact with small clamping footprint for multi-component clamping.
- Powerful clamping, up to 150 kN.
- Low profile with no obstruction of tooling path.
- Maximum clamping stability.
- Pulls down and clamps.

Features

- Quick set-up and clamping.
- Maximise workpieces per fixture.
- Enables three-dimensional machining of components in a single operation, improving accuracy and quality.

ov-W12.111-A-T-eccentric-pull-down-clamping-screw-rnh - Updated -24-10-2022

10960

Material

Clamp: spring steel.
Block: steel.

Technical Notes

The clamping point is 5mm above the machine table. Risers can be used to allow

for through machining and drilling.

Supplied as a set: one-piece clamp, one-piece stop.

Tips

These low-profile clamps and stops have a holding force of 4000 N. The fingers push

the workpiece down before clamping. The small height of the clamps eliminate any risk of collision between clamp and tooling- ideal for machining small and low profile components.

Low Profile Cam Edge Clamps

hex drive

Low Profile Side Clamping

10980.1

LOW PROFILE SIDE CLAMPING

Material

Body: steel (C45), black oxide finish.
Jaw/cam: steel (42CrMo), tempered, black oxide finish.

Technical Notes

Designed to prevent part lift.

Turning the wrench allows the cam to move the jaw forward for clamping. When the wrench is turned back for unclamping, the loaded spring allows the jaw to return to the original position.

Tips

Ensure that mounting surfaces are finished to 6.3a or better, without any scratches or dents.

Order No.	Clamping stroke s_1	d_1	l_1	l_2	l_3	h_1	h_2	h_3	h_4	w_1	w_2	w_3	w_4	Torque to Nm max.	A/F	Clamping force kN max.	Weight g

10982.2

Material

Body: steel (C45), black oxide finish.
 Jaw/handle shaft: steel (C45), tempered.
 Black oxide finish, precision-ground.
 Handle: steel (42CrMo), tempered. Electroless nickel plated (light-duty type), black

oxide finish (standard type).

Technical Notes

The cam handle allows fast clamping in a single operation. Spring-loaded light duty version distributes constant clamping

force. Standard version allows the adjustment of clamping force depending on operating loads. Precision-ground jaw is perfect for clamping the workpiece on its finished surface. The jaw provides downward force to prevent part lift.

12105

Material

Clamp: steel (AISI 4140), HRC 33-39, blackened.

Plate: stainless steel (AISI 304, 1.4301).

Technical Notes

Extremely small and low height cam clamp offering up to 14 kN. clamping force. Ideal for multi-component fixtures.

Clamp is actuated with use of a hexagon key.

To avoid any deformation to workpiece

during clamping, select our clamping plate type.

Also available with an easy to actuate clamping handle model - see parts 12108.W2012 through .W2116.

Spare clamping plates can be ordered separately, see part no. 12108.W5010 through .W5016.

Dimension w_5 is the recommended distance between mounting hole and workpiece.

Note: $w_5 + 1$ is required distance when

using clamping plates.

Tips

To install, drill and tap required hole to dimensions d_2 and space hole to dimension w_5 away from workpiece surface (or $w_5 + 1$ if using clamping plate).

Fully tighten spiral clamp, then slacken off by one turn. Mount workpiece and then re-tighten clockwise to clamp workpiece.

Place a stop to the right of the workpiece to prevent movement.

12191

Material

Steel hardened face.

Technical Notes

Designed to be used in the T-slots of machine tables.

The clamp has both a smooth face (for machined workpieces) and a serrated face (for rougher work).

Provides a positive downhold action whilst maintaining a low profile.

Tips

Torque screw for T-slot nut to 150 Nm.

*Not supplied with T-nut or mounting screw.

Order No.	T-slot size	l_1	h_1	h_2	h_3	h_4	w_1	w_2	Torque to Nm max.	Stroke s_1	Holding force kN

12193

LOW PROFILE SIDE CLAMPING

Material

Clamping face: steel, hardened.
Body: mild steel, blackened.

Technical Notes

The clamp has both a smooth face (for machined workpieces) and a serrated face (for rougher work).

Provides a positive downhold action whilst maintaining a low profile.

Tips

The height of the clamp can be varied by milling the slot deeper into the fixture.

Important Notes

w_3 - the distance between the front of the clamp base and the workpiece. Drill and tap the centreline of „ w_1 “ for mounting holes.

For replacement cam screws see part 12112.

12108.1

Material

Clamp: steel AISI 4140, HRc 33-39, blackened.

Plate: stainless steel (AISI 304, 1.4301).

Technical Notes

Extremely small and low height cam clamp offering upto 14 kN. clamping force. Ideal for multi-component fixtures.

Clamp is actuated with use of a hexagon key.

To avoid any deformation to work piece during clamping, select our clamping plate type.

Also available with an easy to actuate clamping handle model - see parts 12108.W2012 through .W2116.

Spare clamping plates can be ordered separately, see part no. 12108.W5010 through .W5016.

Tips

To install, drill and tap required hole to dimension d_2 and space hole to dimension w_5 away from workpiece surface (or $w_5 + 1$ if using clamping plate).

Fully tighten spiral clamp, then slacken off by one turn. Mount workpiece and then re-tighten clockwise to clamp workpiece.

Place a stop to the right of the workpiece to prevent movement.

12108.2

Material

Clamp: steel (AISI 4140), HRC 33-39, blackened.

Plate: stainless steel (AISI 304, 1.4301).

Technical Notes

Extremely small and low height cam clamp offering upto 14 kN. clamping force. Ideal for multi-component fixtures.

Clamp is actuated via small handle/lever.

To avoid any deformation to workpiece

during clamping, select our with clamping plate type.

Also available in model actuated with use of hexagon key - see parts 12108.W0010 through .W0116.

Spare clamping plates can be ordered separately, see part no. 12108.W5010 through .W5016.

Tips

To install, drill and tap required hole to

dimension d_2 and space hole to dimension w_5 away from workpiece surface (or $w_5 + 1$ if using clamping plate).

Fully tighten spiral clamp, then slacken off by one turn. Mount workpiece and then re-tighten clockwise to clamp workpiece.

Place a stop to the right of the workpiece to prevent movement.

12109

LOW PROFILE SIDE CLAMPING

Material

Steel (AISI 4140), HRc 33-39, blackened.

Technical Notes

Simple and robust cam clamp. Easy to

install. Actuated with spanner.

Tips

To install: insert flanged collar and locking screw into cam body. Tighten locking screw

to fix cam in position. Load component, then use spanner to turn and actuate cam to clamp up to workpiece surface.

Order No.	d_1	d_2	h_1	h_2	l_1	w_1	w_2	Stroke s_1	A/F_1	A/F_2	Torque to Nm max.	Clamping force kN max.	Weight g

12400

Material

Steel, case-hardened, blackened.

Technical Notes

For quick clamping from the side. The clamps give forwards and downwards clamping forces.

Tips

Can bridge T-slots when used with holding plate no. 12410. The clamps low profile enables full-face machining. Often used in conjunction with cylindrical stops and bedding supports.

Supplied with standard T-nut. Clamps can be used in other T-slot sizes by selecting T-nuts no. 24000 as required, e.g. M 8x12, M 8x14, M12x16, M12x18.

Order No.	For T-slot	Type	h_1	h_2	h_3	h_4	l_1	l_2	l_3	d_1	d_2	Stroke s_1	w_1	Clamping force horizontal kN max.	Weight g

Downhold Clamps with cranked clamping lever

Low Profile Side Clamping

LOW PROFILE SIDE CLAMPING

12410

Material

Steel, heat treated, blackened.

Technical Notes

For use with clamps nos. 12400 and 12420.

Tips

Allows downhold clamps to be placed in any desired position, across T-slots etc.

Order No.	h_1 -0.4	h_2	l_1	l_2	l_3	d_1	w_1	w_2	w_3	Weight g
12410.W0730	15	6.5	100	63	20	M 8	30	15	9	246

Downhold Clamps

small footprint

Low Profile Side Clamping

12420

LOW PROFILE SIDE CLAMPING

Material

Steel, ground, case-hardened and blackened.

Technical Notes

Actuate by self-aligning screw on top, rear of the clamp. Extremely high clamping

forces, as the clamp pivots forwards and downwards to securely hold the workpiece. **T-nuts no. 24000 allow the clamps to be used in a variety of T slot sizes.**

Tips

Do not over torque clamping screw as

this can result in the stripping of the thread. For recommended torques - please see table.

May be used with holding plate no. 12410.

Order No.	For T-slot	Type	h_1	h_2	h_3	l_1	l_2	d_1	d_2	Stroke s_1	w_1	Clamping force horizontal kN max.	Torque to Nm max.	Weight g

12422

Material

Steel, case-hardened, blackened, ground.

Technical Notes

By tightening the ball-ended thrust screw the workpiece is simultaneously pressed towards the stops and fixture plate. This

pivoting action enables high horizontal clamping forces. The integrated support has a thread suitable for rest buttons.

Tips

Do not over torque clamping screw as this can result in the stripping of the

thread. For recommended torques - please see table.

May be used with holding plate no. 12410.

10650

ADJUSTABLE VERTICAL CLAMPS

Material

Aluminium body, steel arm and screw.
Aluminium clamping pad.

Technical Notes

Can be used with our stackable riser elements to increase the clamping height

if required (see part 10651).

Supplied with clamping key (10651. W1140). Clamping screws for mounting to machine bed etc. supplied separately, see part no. 10654.

Tips

Can be used on T-slot tables or tapped holes.

Important Notes

Available as a box set, see part 10653.

10651

Material

Spacer elements: aluminium. Supplied with clamping screw.
Clamping key: red plastic coated or nickel

plated.

Technical Notes

Can be used to increase the clamping

height of most of our vertical clamping systems (10650, 10660).

Order No.	Type	h_1	h_2	d_1	d_2	d_3	l_1	l_2	l_3	w_1

10657

Technical Notes

Comprises of two piccolo clamping elements (short 10655.W0020 and long

10655.W0025), two spacer elements (2 x 10656.W0030), one clamping key (10656.W0180), one extra long arm, four M10

screws and six M10 T-nuts (with spring) for 14, 16 and 18mm slots.

Order No.	Description	Clamp reach	Clamping force kN max.	Clamping height min. max.
10657.W0100	Piccolo Clamp Set	54	6.5	0 to 118

10658

ADJUSTABLE VERTICAL CLAMPS

Material

Aluminium body, steel arm and screw.
Aluminium clamp thrust product.

Technical Notes

The only clamp specially designed for

electro-discharge (EDM) machines. The body has a large opening to ensure free flow of fluid.

These clamps are easily disassembled without tools, cleaned, greased and re-

assembled.

Important Notes

Supplied with clamping key and clamping screw (M8 x 30mm) for mounting to machine bed.

Order No.	Arm type	Clamp reach l_1	Clamping force kN max.	Clamping height h_1 min. max.	h_2	h_3	l_2	l_3	r_1	w_1	w_2	A/F	Torque to Nm max.

10660

Material

Aluminium body, steel arm and screw.
Aluminium clamp thrust product.

Technical Notes

Fully adjustable clamping range that can be used with our standard stackable riser

elements (see part no. 10651).

Has both clamping and lifting capability, aided by two different interchangeable arms.

Supplied with operating key.

Tips

Two different clamping arm shapes provided: straight and cranked. See table below for clamping and lifting heights of each arm.

Order No.	Clamp reach l_1 - l_2	Clamp reach l_3 - l_4	Clamping force kN max.	Clamping height h_1 min. max.	Lifting height h_2 min. max.	h_1 min. max.	h_2 min. max.	h_3	h_3 min. max.	h_4 min. max.	l_5	l_6	w_1	w_2	Clamping arm

10661

ADJUSTABLE VERTICAL CLAMPS

Material

Aluminium body, steel arm and screw.
Aluminium thrust product.

Technical Notes

Quick and easy clamping of different clam-

ping heights. The index pin knob allows rapid adjustment to five set positions. Can be used with stackable riser elements to achieve required clamping heights. See part 10662.

Supplied with clamping key.

Order No.	Description	Clamp reach l_1	Clamping force kN max.	Clamping height h_1 min. max.	h_2	h_3	l_2	l_3	r_1	w_1	w_2	A/F	Torque to Nm max.

ADJUSTABLE VERTICAL CLAMPS

10670

Material

Body: aluminium.
Clamping piece: steel.

Technical Notes

Unique double action, moves forward and

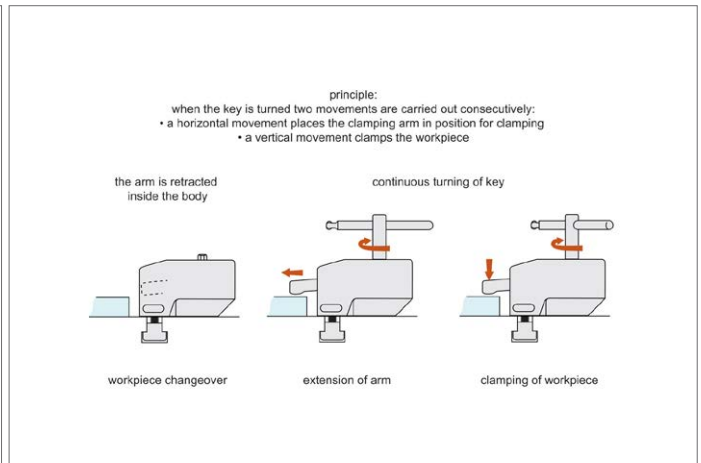

downward simply with a turn of the hex key.
Very compact, powerful and quick acting.

Tips

Clamping height can be easily adjusted by

using a spacer element or using our standard spacers (see part no. 10671).
Supplied with clamping key and clamping screw (M10 x 35mm).

Order No.	Clamping force kN max.	Clamping height h_1 min. max.	Clamping reach l_1	h_2	h_3	l_2	l_3	l_4	w_1	w_2	A/F	Torque to Nm max.

thicknesses. Suitable mounting screws also supplied. For use with clamp 10670.

Technical Notes

Supplied as set of six different spacer

Can reach a maximum clamping height of 126mm.

Order No.	Type	h_1	l_1	l_2	w_1
10671.W0080	Set of 6	2, 4, 8, 16, 32 and 64	92	18	50

10675

Material

Steel body and clamping arm, with special clamping screw.

Supplied with clamping key, extension key and clamping screw (M14 x 40mm). Please order suitable T-nuts separately, see part no. 24000.

Tips

Clamping height can be raised using our stackable elements (part no. 10676).

Technical Notes

For very heavy machining. Arm retracts.

Order No.	Clamping force kN max.	Clamping height h_1 min. max.	Clamping reach l_1	h_2	h_3	d_1	l_2	l_3	l_4	w_1	A/F_1	A/F_2	Torque to Nm max.

ADJUSTABLE VERTICAL CLAMPS

ov-W10650-A-T-W10678-A-T-over-clamping-vertical-pressure-rnh - Updated - 20-10-2022

Slide the T-nut into the T-slot position and tighten the clamp onto the T-slot base, with the aid of the clamp key (shown in the image in blue).

Clamp the workpiece by twisting the key. Start machining.

When unclamped the arm and the clamp remain in position

Fix to threaded bases with a special screw
M10, M12, M14, M16.

Fix to T-slots with suitable T-nuts.

The clamps are easily stackable to achieve required clamping height.

10600

ADJUSTABLE VERTICAL CLAMPS

Material

Steel, forged, tempered and burnished.

Technical Notes

Type one: clamp and T-bolt set.
Type two: clamp only.

h_1 - depends on the depth of the slot position and the position of the fixture nut.

Tips

Often used for clamping press tools.
Easy height adjustable clamp. No fitting

support required.

Used with:
21000 T-slot bolts, 24400 collar nuts,
25000 plain washer.

Order No.	Type	T-bolt	For T-bolt	For T-slot	$d_1 \times l_1$	h_1	l_2	l_3	l_4	l_5	w_1	Weight g

10600.W0121	Clamp only	-	M18 - M20	-	21x175	0-85	135	80	70	40	60	1600

10603

Material

Clamp: steel, tempered and galvanised.
 T-bolt: steel, forged (strength class 8.8).
 See part 21000 for details.
 Washer: steel, hardened. See part 25000 for details.
 Nut: steel, heat-treated to strength class 10. See part 24300 for details.

Technical Notes

Ideal for clamping components of varying

heights - requires no additional support or packing pieces.
 Continuously adjustable clamp over range of heights (see dimension h_1 in table), with high clamping force.
 Support heel and stud counterhold are non-detachable, making for a single piece clamp which is quick and easy to use.
 Supplied complete with T-bolt, washer and T-nut (see data table).

Ideal for use on press tools and injection mould tools. Height can be increased by using Support Extensions 10604.

Tips

*Clamping forces based on using stud and nut of strength class 8.8 or better, optimal positioning of the clamp and good condition of the thread.

Order No.	T-bolt	For T-slot	h_1	h_2	h_3 min. max.	h_4	h_5	l_2	l_3	$w_1 \times l_1$	w_2	w_3	d_1	Clamping force kN max.	Weight g

10630.1

ADJUSTABLE VERTICAL CLAMPS

Material

Steel, tempered and burnished.

Technical Notes

Weight-saving thanks to its lightweight design. Variable and fast adjustment at a distance from the workpiece. No additional

clamping supports are needed to reach the required clamping height. The U-piece is undetachable from the clamp.

Tips

For clamping, clamping bolts no. 21000 and studs no. 21100 and cheese head

screws (ISO 4762) can be used.

A washer no. 25000 must always be used between the hexagonal nut and U-piece. h_1 is dependent on depth of slot to DIN 650 and position of fixture nut.

Order No.	Size	For clamping screw	h_1 min. max.	h_2	h_3	l_1	l_2	l_3	w_1	d_1	Weight g

10630.2

Material

Steel, tempered and burnished.

Technical Notes

Complete with T-bolt set. Weight-saving thanks to its lightweight design. Variable

and fast adjustment at a distance from the workpiece. No additional clamping supports are needed to reach the required clamping height. The U-piece is undetachable from the clamp.

Tips

A washer (DIN 6340) must always be used between the hexagonal nut and U-piece. h_1 is dependent on depth of slot to DIN 650 and position of fixture nut.

12550.1

ADJUSTABLE VERTICAL CLAMPS

Material

Steel (42CrMo), tempered, black oxide finish.

Technical Notes

Very useful for limited space vertical clamping, can be recessed into bores to minimize height. Clamping stroke (see diagram below) for M 4= 0-3mm, for M 6= 0-4mm.

Clamping stroke (see diagram below) for M 4= 0-3mm, for M 6= 0-4mm.

ADJUSTABLE VERTICAL CLAMPS

12562.2

ADJUSTABLE VERTICAL CLAMPS

Material

Body, handle, clamping spindle: steel (C45), quenched and tempered, electroless nickel plated.
 Arm, cam shaft: steel (42CrMo4), quenched

and tempered, electroless nickel plated.
 Knob: phenolic plastic, black.

parenthesised values denote clamping height range.

Tips

Clamping height can be adjusted. The

ADJUSTABLE VERTICAL CLAMPS

12564.1

Material

Body, shaft: steel (42CrMo), tempered and black oxide finish.
 Clamp arm, adaptor head: steel (C45), tempered and black oxide finish.
 Handle: steel (C45), black oxide finish.
 Ball knob: ABS resin, black.

Technical Notes

When installing a pad on the clamp arm, lock the clamp arm using a wrench to prevent the clamp from receiving any torque.
 Clamping height can be adjusted. The values in brackets shows clamping height range.

range.

Tips

For parts 12564.W0031, 12564.W0131, 12564.W0041 and 12564.W0141 the handle must be ordered separately.

Order No.	Clamping direction	Type	h_1	h_2	h_3	h_4	h_5	l_1	l_2	l_3	Weight g

Miniature Down Thrust Clamps swivelling

Adjustable Vertical Clamps

12601

ADJUSTABLE VERTICAL CLAMPS

Material

Steel case-hardened, blackened and ground.

Technical Notes

Ideally suited for clamping small

components. The 10mm wide nose allows a very small clamping footprint. For suitable self-aligning pads (if required) see no. 34100.

Tips

T-nuts can be supplied in any M8 sizes, see no. 24000.

Order No.	Type	Clamping height h_1 min.	Clamping height h_1 max.	Stroke	d_1	d_2	w_1	w_2	h_2 min.	h_2 max.	h_3	h_4	h_5	l_1	l_2	l_3	l_4	Weight g

12602

Material

Steel case-hardened, blackened and ground.

Technical Notes

For heavy-duty clamping applications

where space and height are limiting factors.

Tips

Often used for clamping of injection mould tools and the like.

T-nuts removable. For other T-nut sizes please refer to no. 24000.

Order No.	Type	Clamping height h_1 min.	Clamping height h_1 max.	Stroke	d_1	d_2	w_1	w_2	h_2 min.	h_2 max.	h_3	h_4	l_1	l_2	l_3	Weight g

Down Thrust Clamps swivelling

Adjustable Vertical Clamps

12603

ADJUSTABLE VERTICAL CLAMPS

Material

Steel case-hardened, blackened and ground.

Technical Notes

Clamping height increased with the addition of height adjusting cylinders no. 12605.W0125-.W0167 and reduced with self-aligning pads nos.34100 or 34120.

Maximum clamping height (h_1 max.) must

not be exceeded.

Use of positioning ring 12603.W0350 increases height h_2 by 7mm and reduces stroke by 7mm.

* Part no. 12603.W0063 has a M16 threaded stud.

Tips

Offers rapid manual clamping with easy removal of workpieces through rotation of

clamp arm away from component.

Positioning ring no. 12603.W0063, and its integral stop, provides repeated accuracy of the clamping position.

SAFETY: base of the clamping cylinder must make full surface contact.

T-nuts removable. For other T-nut sizes please refer to no.24000.

ADJUSTABLE VERTICAL CLAMPS

Height Adjusting Cylinders

for down thrust clamps 12603

Adjustable Vertical Clamps

12605

ADJUSTABLE VERTICAL CLAMPS

Material

Steel case-hardened, blackened and ground.

Technical Notes

Increase clamping height for down-thrust clamps, alternatively can be used as

general height setting and supporting elements.

Adjustable Vertical Clamps

Height Adjusting Cylinders for down thrust clamps 12603

ADJUSTABLE VERTICAL CLAMPS

Down Thrust Clamps

retractable

Adjustable Vertical Clamps

12608

ADJUSTABLE VERTICAL CLAMPS

Material

Steel case-hardened, blackened and ground

Technical Notes

Use when swivelling of clamp is not possible, horizontal retraction available, see l_1 min - l_1 max.
Use of positioning ring 12603.W0350

increases height h_1 by 7mm and reduces stroke by 7mm.

Operation:

Push clamp jaw back. Insert workpiece to fixture. Push clamp jaw forwards, adjust position with knurled clamp screw, lock off. Apply clamping pressure.

Tips

Offers quick manual clamping by use of clamping screw/lever. Compact design and height adjustable.

Used with:

24000 T-nuts
12603.W0350 positioning ring.

Retractable Clamps with eccentric handle

Adjustable Vertical Clamps

ADJUSTABLE VERTICAL CLAMPS

12615

Material

Body/lever arm: steel (C45), black oxide finish.

Cam: steel (C45), carburized-hardened, black oxide finish.

Handle: phenolic plastic, black matt. Clamping handle is not included.

Technical Notes

Can be used in both vertical and horizontal

clamping applications.

Spring-loaded clamp that provides constant clamping force.

Long clamping-bar projection range allows clamping of a recessed part.

When using your own clamping bar, ensure that the diameter is finished to a H9 or better tolerance.

Tips

When a reaction force (F) becomes greater than clamping force, the clamping bar slides back, unclamping the part.

Floating Clamps M12

combined clamping and locking

Adjustable Vertical Clamps

12660.1

ADJUSTABLE VERTICAL CLAMPS

Material

Body: steel case-hardened, nitrided, blackened and ground.
Clamping jaws: steel case-hardened, nitrided, blackened.
Housing: aluminium, red anodised.

Technical Notes

Used to clamp and support additional clamping points on components, whilst minimising distortion in the clamping of components. It also serves to reduce vibration during machining.

Tips

Alternative clamping jaws available, see

part 12660.W0050 to W0058 and 12660.W0148 to W0156.

The benefits of the floating clamp are:

- Avoids vibration during the processing
- Clamps ribs and flanges to reinforce clamped components
- Distortion-free clamping of first op. parts.

Assembly

1. Mount the floating clamp (M 12 connection thread) onto the device with a wrench (A/F 46).
2. Adjust the height limit stop and the rotating area with the red sleeve and clamp with a set screw (3 x A/F 2,5). When setting

the height limit, consider tolerance of workpiece.

Operation

1. Push the floating clamp downwards.
2. Pivot the clamping jaws in as far as possible. The floating clamp contacts the bottom of the workpiece with a slight spring load.
3. Tighten the floating clamp with a hexagonal nut (A/F 18) having a min. torque of 15 Nm and a maximum torque of 30 Nm. In the clamping process, the workpiece is clamped and simultaneously supported.
4. Releasing is done in reverse order.

Order No.	Description	Clamping & support force kN max.	Clamping stroke	Weight g

Housing: aluminium, red anodised.

Technical Notes

Used to clamp and support additional clamping points on components, whilst minimising distortion in the clamping of components. It also serves to reduce vibration during machining.

Tips

Alternative clamping jaws available, see part 12660.W0050 to W0058 and 12660.W0148 to W0156.

Floating clamp benefits:

Floating Clamp 12660.1 is used to clamp and support over-determined points on a component, offering the following benefits:

1. No deformation in the clamping of unstable components.
2. Eliminates vibration during machining.
3. Clamps on the smallest area to improve clamping stability.

Installation of floating clamp on fixture:

1. Fix clamp on to machine bed with A/F 46 spanner. Clamp has 12mm connection thread, select suitable T-nut for your machine bed.

2. Adjust the clamp's height limit stop and rotating area with the red setting sleeve, set sleeve position through tightening the 3 grub screws (A/F 2,5mm). When setting the height limit, make generous allowance for variation in workpiece tolerance.

Clamping process:

1. Push floating clamp downwards,
2. Pivot clamping jaws into component as far as possible. Clamp will contact bottom of component with a light spring pressure.
3. Tighten floating clamp with A/F 18mm hex nut – torque to min. 15Nm, 30Nm max. In the clamping process workpiece is clamped and simultaneously supported.
4. To release, reverse steps 3 to 1.

Order No.	Description	Clamping & support force kN max.	Clamping stroke	Weight g
12660.W0008	Clamping & Support	8	0-12	1450

12660.3

Material

Steel, case-hardened, nitrided.

Technical Notes

The clamping jaws can be used for floating clamps 12660.W0008, 12662.W0010,

12660.W0012 and 12662.W0014

Tips

When using custom-made jaws it is important to insert the tightening screw (M 8 grade 12,9, 43Nm) 10mm deep into the

clamp housing on the upper clamping jaw and 9mm deep into the clamp housing on the lower clamping jaw.

Order No.	Type	Clamping range	h_1 -0.1	Weight g
12660.W0050	Lower Jaw	-	26.8	83
12660.W0052	Upper Jaw	0 - 12	21	69

Clamping Jaws for floating clamp M12

Adjustable Vertical Clamps

12660.4

ADJUSTABLE VERTICAL CLAMPS

Material

Ball: steel ball-bearing
Clamping jaws: steel case-hardened, nitrided.

Technical Notes

A selection of the alternative upper and

lower jaws for floating clamps. The tightening torque of the floating clamp must be adapted dependent on condition. Note the surface pressure due to the reduced contact surface of the clamping jaws.

Important Notes

The clamping jaws can be used for floating clamps 12660.W0008, 12662.W0010, 12660.W0012 and 12662.W0014.

Order No.	Type	Clamping range of clamp in combination with standard lower jaw 12260.W0050	Clamping range in combination with lower jaw 12260.W0148 max.	Weight g
12660.W0054	Upper Jaw (Type One)	4-16		91

Adjustable Vertical Clamps

Floating Clamps - Compact

combined clamping and locking

12661

ADJUSTABLE VERTICAL CLAMPS

Material

Body: case hardened steel, nitrided, manganese phosphate treated and ground.
Clamping jaws: case hardened steel, nitrided, manganese phosphate treated.
Housing: aluminium, red anodised.

Technical Notes

Used to clamp and support additional

clamping points on components, whilst minimising distortion in the clamping of components. It also serves to reduce vibration during machining.

Tips

The benefits of the floating clamp are:
- avoids vibration during the processing
- clamps ribs, beads and shackles to rein-

force clamped components
- distortion-free clamping of raw parts.
Compact version with reduced height.
Used with:
24000 T-Nuts
12660 Clamp Jaws - upper & lower

Order No.	Description	Clamping & support force kN max.	Clamping stroke	Weight g
12661.W0008	Clamping & Support	8	0-12	1450

Floating Clamps M12

separate clamping and locking

Adjustable Vertical Clamps

12662.1

ADJUSTABLE VERTICAL CLAMPS

Material

Body: case hardened steel, nitrided and ground.

Clamping jaws: case hardened steel, nitrided.

Housing: aluminium, blue anodised.

Technical Notes

Used to clamp and support additional clamping points on extremely pliable work pieces, whilst minimising deformation of component. It also serves to reduce vibration during machining.

Tips

Alternative clamping jaws available, see part 12660.W0050 to W0058 and 12660.W0148 to W0156.

Floating clamp benefits:

Floating clamp 12662.1 is used to clamp and support over determined points on a component, offering the following benefits:

1. No deformation in the clamping of unstable components.
2. Eliminates vibration during machining.
3. Clamps on the smallest area to improve clamping stability.

Installation of floating clamp on fixture:

1. Fix clamp on to machine bed with A/F 46 spanner. Clamp has 12mm thread, select suitable T-nut for your machine bed.
2. Adjust the clamp's height limit stop and rotating area with the blue setting sleeve, set sleeve position through tightening the 3 grub screws (A/F 2,5mm). When setting the height limit, make generous allowance

for variation in workpiece tolerance.

Clamping process:

1. Push floating clamp downwards.
2. Pivot clamping jaws into component as far as possible. Clamp will contact bottom of component with only light spring pressure.
3. Tighten floating clamp with A/F 18mm hex nut - torque to min. 15Nm, 30Nm max. The jaws are clamping the workpiece, the clamp is still floating.
4. Tighten hexagon collar with A/F 10mm hex to max. 10Nm torque.
5. Clamping process is complete.
6. To release, reverse steps 5 to 1.

Adjustable Vertical Clamps

Floating Clamps M16 combined clamping and locking

ADJUSTABLE VERTICAL CLAMPS

12664.1

Material

Body: steel case-hardened, nitrided and ground.

Clamping jaws: steel case-hardened, nitrided, manganese phosphate treated.
Housing: aluminium, red anodised.

Technical Notes

Used to clamp and support additional clamping points on extremely pliable work pieces, whilst minimising deformation of component. It also serves to reduce vibration during machining.

Tips

Alternative clamping jaws available, see part 12664.W0060 to W0066.

Floating clamp benefits:

Floating clamp 12664.1 is used to clamp and support over-determined points on a component, offering the following benefits:

1. No deformation in the clamping of unstable components.
2. Eliminates vibration during machining.
3. Clamps on the smallest area to improve clamping stability.

Installation of floating clamp on fixture:

1. Fix clamp onto machine bed with A/F 46 spanner. Clamp has 16mm connection thread, select suitable T-nut for your machine bed.
2. Adjust the clamp's height limit stop and rotating area with the red setting sleeve, set sleeve position through tightening the

3 grub screws (A/F 2,5mm). When setting the height limit, make generous allowance for variation in workpiece tolerance.

Clamping process:

1. Push floating clamp downwards.
2. Pivot clamping jaws in to component as far as possible. Clamp will contact bottom of component with only low spring pressure.
3. Tighten floating clamp with A/F 24mm hex nut - torque 50Nm, 115Nm max. **In the clamping process the workpiece is clamped and simultaneously supported.**
4. To release, reverse steps 3 to 1.

Adjustable Plain Clamps with soft brass face

Standard
Manual Clam-

10420

STANDARD MANUAL CLAMPING

Material

Clamps: steel, heat-treated, blackened.
Protective face: brass, brazed.

Technical Notes

Type one: clamp only.
Type two: clamp and support screw only.
Type three: clamp, support screw and T-bolt set.

h_1 - dependent on depth of slot and position of fixture nut.

The protective brass plate, brazed on to the clamp, acts to protect the workpiece from damage under clamping.

Tips

Often used for clamping press tools.

Used with:

10680 ratchet clamp level, 21000 T-slot bolt, 24400 collar nut, 25000 plain washer.

Replacement support screw see part nos. 34500 and 34520.

10425

Material

Clamp: steel, heat-treated and blackened.
Pads: brass or plastic.

Technical Notes

Clamp provided without clamping pads.

Mounting screws included with clamping pads.

Temperature should not exceed 250°C when using brass pad, or 0-50°C when using plastic pad.

Tips

Particularly suitable for clamping sensitive components; soft pads protect the work-piece.

STANDARD MANUAL CLAMPING

10500

Material

Steel, heat-treated and enamelled.

Technical Notes

Type one: clamp, support screw and T-bolt set.

Type two: clamp and support screw only.

Dimension h_1 is dependent on depth of slot and position of fixture nut.

Tips

Often used for clamping press tools.

Used with:

10680 ratchet clamp lever, 21000 T-slot bolt, 24400 collar nut, 25000 plain washer.

Replacement parts:

Replacement support screw see part no. 10410.

Important Notes

Particularly suited to clamping low work-pieces. The clamping height can be adjusted by means of the support screw.

Adjustable Step Pillar Clamps with goose neck

Standard
Manual Clam-

10550

STANDARD MANUAL CLAMPING

Material

Steel forged, thread quality 8.8.

Technical Notes

Clamping unit for quick action. The compact construction ensures a small foot-

print on the machine table. Allows clamping over a wide height range with minimum fuss.

* Clamping forces stated for minimum h_1

dimension.

Tips

Used with:
24000 T-nuts.

Order No.	Size	T-slot size	h_1	l_1	Tightening torque Nm	w_1	w_2	w_3	Clamping force kN max.	Weight g

10588.1

STANDARD MANUAL CLAMPING

Material

Steel, tempered, alloyed and galvanised (black).

Technical Notes

Complete with mounting kit.
Powerful, adjustable height clamp for

milling, press tools and injection mould applications. Clamping force 22 kN to 49 kN depending on size. Low height readily adjustable. Smooth or ribbed clamping pad available. For use in threaded holes (M10, M12, M16, M20) and 12-28mm T-slot

bases.

Tips

Torque the screws to the correct specified torque. Clamping force depends on thread lubrication and thread condition.

10588.3

STANDARD MANUAL CLAMPING

Material

Steel, tempered, alloyed and galvanised (black).

Technical Notes

Complete with three-step support element, clamping unit and mounting kit.

Tips

Three step clamping:

1. Position clamp on table and tighten to correct torque.
2. Adjust the clamping arm.
3. Tighten the clamping screw to clamp

part (tighten to correct torque).

Important Notes

Not suitable for use on injection moulding, die casting machines or presses.

Order No.	Size	For T-slot	d ₁	d ₃	d ₅	h ₁ min. max.	h ₂	h ₃	l ₁	l ₂	Torque to d ₂ Nm max.	Torque to d ₄ Nm max.	w ₁	w ₂	w ₃	A/F	Load capacity for static load kN max.	Weight g

10592.1

Material

Body: steel, heat-treated and black coated.
Lever: steel, heat-treated and silver coated.

Technical Notes

Assembly and set-up:

1. Take out stop pin ISO 4762-M 6 x 10.
2. Move back and take out clamping lever.

3. Tightening by two screws with internal hexagon (included).
4. Place clamping lever in sliding rail.
5. Tighten clamping screw to torque required.

Tips

The clamps are corrosion resistant, provide easy clamping of varied heights with

strong clamping forces. The self-locking clamping lever allows the clamp to be used in horizontal or vertical orientations. Slide back the clamping lever to allow access to parts. Corrosion resistant coating is applied to the spacer elements (see order no's 10592.W0112 and 10592.W0116).

STANDARD MANUAL CLAMPING

18582.2

Material

Handle: zinc die-cast, black plastic coated.
Grub screw, inner parts, adjusting nut: steel, zinc plated or stainless steel (AISI 303, 1.4305).

Bearing washer: Thermoplastic (POM), glass-reinforced.

Technical Notes

Enables quick and easy clamping of work-

pieces. Adjustable type enables re-positioning of lever to avoid obstruction of the workpiece.

Withstands temperatures of up to 80° C.

Technical Notes

Vice towers mount directly to your 4" or 6" vice to elevate your workpiece into the 5-axis envelope and allow machining on 5 sides of the workpiece. Incorporating talon, versagrip and pitbull clamps the system is exceptionally versatile in securing round or square stock material. As well as being suited for mounting to

your vice, the vice towers can also be mounted to your T-slot table.

Tips

Low profile clamping reduces material costs and eliminates the need for time-consuming workpiece preparation.

Important Notes

Full set contents:

- 2 x vice towers
- 4 x talon grips 12034.W0075
- 4 x versagrips 12036.W0175
- 1 x talon stop 12035.W0220
- 2 x pitbull clamp 12031.W0060
- 2 x each support bolts M12x65/100/200
- 4 x mounting bolts M12x55
- 4 x T-nuts M12x16

Order No.	Type	Suitable vice size	Mounting bolts	h_1	h_2	h_3	l_1	l_2	l_3	l_4	w_1
12464.W0066	Set	4" or 6"	M12x55	150	23.9	17.5	150	126.0	98.6	63.5	26.9

Vice Application

- Mount jaws to either 4 or 6 inch vice with logo facing outwards, keeping the mounting bolts loose.
- Determine which grippers will be used, install and hand-tighten the grippers. If VersaGrips are being used to grip round stock, place in outboard bores. Do not tighten screws at this point. Tighten vice lightly onto workpiece allowing jaws to centre themselves, adjust VersaGrips, and tighten gripper screws and mounting bolts for both jaws.
- Loosen vice jaw for load/unload clearance of workpiece. Install support/pivot bolt.
- Setup is complete. Tighten support bolt allowing grippers to penetrate 0.25-1.52mm on material < 40 HRC.
- For additional holding force, loosen vice handle which will eliminate any jaw lift that may have occurred and depending on amount of torque can increase pressure to over 4000 kg.

T-slot and Grid Table Application

- Using vertical counterbores on outboard edges of jaws, install mounting bolts into t-nuts or grid plate and adjust accordingly. Do not tighten at this time.
- Select appropriate support bolts and install in upper horizontal counterbore and thread into opposite tower.
- Place workpiece between jaws and lightly tighten upper support bolt until all grippers contact workpiece. Tighten vertical mounting bolts.
- Loosen upper support bolt one full turn or until adequate workpiece clearance is obtained.
- Upper support bolt is now the “drive bolt” for securing and releasing workpiece.
- Any size T-nuts can be utilised. We provide 16mm T-nuts.

19100

Material

Clamp sets are designed for use on T-slot machines, and contain all the necessary

parts to quickly clamp tools, fixtures or workpieces. All parts are interchangeable and are made of heat treated steel to DIN

standard (class 8 or class 10). The clamping set comes in a wooden box which has a removable lid.

2.2 Ton Finger Clamp - Smooth Face movable jaw

Heavy-Duty Side Clamping

11040

HEAVY-DUTY SIDE CLAMPING

Material

Hardened steel, with spring steel clamping element.

Technical Notes

A low height, very powerful compact clamp. These clamps have a unique sideways and

downwards clamping action.

Tips

Provided with specially ground location bolts Ø10,2 - M10, allowing for precise positioning. For mounting there are 2 tapped holes at 44,00 ±0,005mm centres, M10 with depth of 28mm, counterbore

10,2 (H6) with depth of 14mm.

Important Notes

When used in conjunction with fixed stop, part nos. 11041 or 11043, these clamps achieve a positive downforce on both faces of the workpiece - a unique feature.

Order No.	Clamping height h_1		Clamping stroke l_1		d_1	d_2 tol. h6	h_2	h_3	h_4	h_5	l_2

11040.W0025	13	8	18	60	44	30	8	50		22	

11041

Material
Spring steel.

Technical Notes
These stops have a unique sideways and downwards action.

Tips
Provided with specially ground location bolts $\text{Ø}10,2 - \text{M}10$, allowing for precise positioning. Precision of the screws also allows dimension l_2 to be used as a useful

clamping datum. For mounting there are 2 tapped holes at $44,00 \pm 0,005\text{mm}$ centres, $\text{M}10$, with depth of 28mm, counterbore $10,2 (\text{H}6)$, with depth of 14mm.

Heavy-Duty Side Clamping

1.0 Ton Finger Clamps for T-slots

HEAVY-DUTY SIDE CLAMPING

1.0 Ton Fixed Stops for 1 ton finger clamps

Heavy-Duty Side Clamping

11082

HEAVY-DUTY SIDE CLAMPING

Material

Hardened steel, with spring steel clamping element.

Technical Notes

A low height, very powerful compact clamp stop.

Tips

Supplied with clamping screw and Ø18 centering bush. When used longitudinally along a T-slot it is advisable to use anti-slip T-nuts or additional stops to resist the force exerted by the clamping element.

For use with part nos. 11080 and 11081.

Fitting instruction:
Tap M10/M12 counterbore 18,00 (H7) with depth 5mm.

Order No.	Type	Jaw height h_1	Jaw type	w_1	d_1	d_2	h_2	h_3	l_1	l_2

11095.W0240	22	18	22	12.2

12318

Material

Body: steel, tempered.
Clamping jaws: steel, case hardened.

Technical Notes

Reversible clamping jaws with smooth side for machined workpieces and serrated side for rough clamping surfaces.

Tips

The large clamping surface makes these solid clamping jaws suitable for laterally clamping workpieces. We recommend using two clamping studs for fastening the solid clamping jaw on the machine table. Screws for T-slots No. 21000 - two screws per

clamping jaw - should be ordered separately as a fastening bolt depending on the width of the machine T-slot.

Important Notes

*Clamping forces F_1 and F_2 depend on the T-slot size.

Order No.	For T-slot	w_1	w_2	h_1 min.	h_1 max.	h_2	h_3	l_1 max.	l_2	l_3	l_4	Stroke s_1	A/F	Weight g

Clamping Jaws - Standard downhold action

Heavy-Duty Side Clamping

12300

HEAVY-DUTY SIDE CLAMPING

Material

Body: cast iron.
Jaws: steel, hardened.

Technical Notes

For mounting of each clamp to machine

table, two clamping bolts no. 21000,
washers no. 25000 and fixture nuts no.
24300 should be ordered separately.
Hex. key provided.

Tips

Can be actuated from left hand side only.
Sold in pairs.
For table of clamping forces, see below.

Order No.	For T-slot	w ₁	w ₂	h ₁	h ₂	h ₃	l ₁	l ₂	Stroke s ₁	Weight g
12300.W0016	10-14	40	13	50	20	30	115	60	3	1590

12300.W0030	22-36	80	31	75	30	45	205	102	5	7900

12320

Material

Body: cast iron.
Jaws: steel, hardened.

Technical Notes

Jaw plates are reversible (ribbed/smooth).

Clamping action is forwards and downwards into the workpiece.

Tips

Extremely powerful clamps for use where high clamping forces are required. Due to

the high clamping forces we recommend the use of 2 clamping bolts (no. 21000), for each clamp.

Order No.	For T-slot	w ₁	w ₂	w ₃	h ₁ min.	h ₁ max.	h ₂	h ₃	l ₁	l ₂	Stroke s ₁	A/F	Weight g

Our comprehensive range of clamping elements includes a compact and powerful workpiece clamping element, the chain clamping set no. 12700. This set was specifically designed for clamping large workpieces with round or arched surfaces.

Due to an increase in the bearing surface of the chain, the clamping force is distributed across the workpiece thereby reducing deformation.

Setting Up

1. Attach the hook unit and the take-up unit as close to the workpiece as possible.

2. Turn the knurled nut on the take-up unit until the pull rod is fully extended. Select the number of chain segments required for the workpiece and attach to the pull rod.

3. Fine adjustment of the chain lengths is made by tightening the knurled nut until the chain slightly touches the workpiece.

4. To clamp the workpiece connect the free end of the chain onto the hook unit. Using a hex key tighten the eccentric shaft, and ensure the lever is rotated to its fully locked position (180°). The workpiece is now clamped.

Important Factors in Selection of Chain Clamp

Chain Length and Stretch

Torque value of 50 Nm is used for M12 set.

Torque value of 90 Nm is used for M16 set.

The clamping force achievable through the Wixroyd chain clamp set is dependent upon three factors:

- Workpiece diameter (see graph).
- Chain length and stretch (see graph).
- Contact angle of chain and workpiece (see table below right).

Chain Stretch at Specified Torques

Table of Clamping Force to Contact Angle α

Clamping with the chain clamp set.

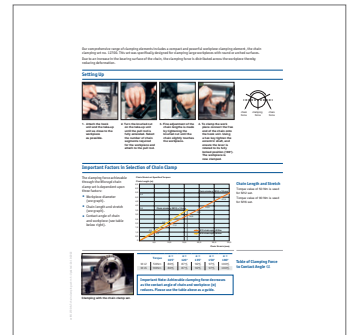

Torque	$\alpha = 105^\circ$	$\alpha = 120^\circ$	$\alpha = 135^\circ$	$\alpha = 150^\circ$	$\alpha = 180^\circ$
M12 50Nm	80%	87%	92%	97%	100%
M16 90Nm	80%	87%	92%	97%	100%

Important Note: Achievable clamping force decreases as the contact angle of chain and workpiece (α) reduces. Please use the table above as a guide.

Chain Clamping Set with lanyard

Chain Clamping

12700

CHAIN CLAMPING

Material

Alloy steel.

Set contents:

- 1 x tension hook,
- 1 x take-up hook,
- 1 x clamp chain protection set,
- .W0112 (2 x 492mm, 1 x 238mm, 1 x 15,9mm),
- .W0116 (1x991mm, 1x229mm, 1x483, 1x25mm),
- 4 x split chain links,
- 6 x plastic protectors (to protect the work-piece),

1 x chain clamp protection lanyard.

Note: M20 and M24 clamp sets only have 3 chain lengths.

Technical Notes

For clamping valves, flanges, pump cases etc - can be used on fixture sub-plates or machine tables. The clamping force is generated by the eccentric shaft, and the force is determined by the take-up which is adjusted using the knurled screw. Please order T-nuts no. 24000 separately if

required.

Tips

The even distribution of the clamping force reduces workpiece deformation. The work-pieces are protected from marking of the chain by plastic protectors which are locked into the chain segments. Chains enable a large range of adjustment. See table opposite for details for achievable clamping forces.

Tension Hook for chain clamping set 12700

12702

CHAIN CLAMPING

Material

Hardened and tempered alloy steel.

Technical Notes

For use with chain clamp set 12700.

Tension hook provides final clamping and tightening of component when chain clamp 12700 is used. Counter catch hook is for the iniatial pre-tightening of chain

prior to final clamping. Comes complete with safety lanyard.

Turnbuckle for chain clamping set 12700

Chain Clamping

12704

CHAIN CLAMPING

Material

Alloy steel.

Technical Notes

For use with chain clamp set 12700. The

turnbuckle is clamped between the chains using two locking links. The chain is pre-tensioned by turning, and the play (caused by lengthening of the chain) is removed.

Order No.	Size	l_1	l_2	l_3	w_1	A/F	Clamping force kN max.	Weight g

12704.W0024	24	214-284	180	105	31	50	120	3517

12705

Technical Notes

Lanyard: for use with chain clamp, when properly assembled prevents chain from snapping uncontrolled if chain breaks.

Protective element: can be placed between chain and workpiece to protect

surfaces.

Chain Links: for use to connect chain of different lengths to expand chain capacity and hence accommodate larger workpieces.

Chain: DIN8187, as well as being extended with the use of connecting links, can also

be shortened to suit requirements. Chain is pre-tensioned to minimise elongation.

Important Notes

If the lanyard system is damaged the entire lanyard set must be replaced.

12750

Material

Clamp: as part no. 10650.
Chain: steel, 19,05mm pitch - 1 metre.
Chain anchor: steel.
Quick chain link: steel.

diameter workpieces.

Extra lengths of chain can be ordered and linked together.
Clamp or unclamp with a simple turn of the red key. The chain can then easily be removed clear from the workpiece.

Tips

Chains with rubber protective pads can also be provided on request (min. radius 200mm).

Technical Notes

Provides strong and even clamping of large

Chain Clamp Sets - 16kN for large diameter clamping

Chain Clamping

12752

Material

Clamp - as part no. 10678.
Chain - steel, 25,4 pitch. 3m long.
Chain anchor - steel.

Technical Notes

Heavy clamping forces of up to 50kN.

Provides strong and even clamping of large diameter workpieces.
Clamp or unclamp with a simple turn of hexagon socket. Chain can be easily removed clear from the workpiece.
Please use socket head cap screw of

strength class 12,9 for mounting. Please order T-nuts to suit your application separately, if required see part 24000.

Assembly Chart

The system consists of 10 kinds of components. Please refer to the table on the next page for details of each component.

Operation

Install clamping screw on the workpiece and mount it on clamping module.
Tighten the locking screws on the side of the clamping module.

Application Example

Locating Mechanism

Dual surface contact at the tapered surfaces and contact surfaces provides 5 μ m locating repeatability.

BORE CLAMPING

ov-W12043-A-T-W12049.5-A-T-modular-pull-clamping-system-b-rmh - Updated - 21-10-2022

Permissible Cutting Force & Workpiece Weight for Clamping Module System 12043 to 12049

1 Module

Note: Prepare a locator when the workpiece gets big rotating force.

Ensure the cutting force and the workpiece weight are within the allowable level.

Horizontal

Vertical

Permissible Cutting Force & Workpiece Weight for Clamping Module System 12043 to 12049

4 Modules

Part Number	Allowable Cutting Force		Allowable Workpiece Weight	
	F(kN)	Max(kN)	w(kg)	Max (kg)
12043.W0008	$2X (0.10p_1 + 180)/H$	3.6	$2X (0.10p_2 + 180) X100/H$	360
12044.W0008	$2X (0.05p_1 + 90)/H$		$2X (0.05p_2 + 90) X100/H$	
12045.W0008	$2X (0.05p_1 + 90)/H$	6.4	$2X (0.05p_2 + 90) X100/H$	640
12043.W0011	$2X (0.24p_1 + 432)/H$		$2X (0.24p_2 + 432) X100/H$	
12044.W0011	$2X (0.14p_1 + 252)/H$	12	$2X (0.14p_2 + 252) X100/H$	1200
12045.W0011	$2X (0.14p_1 + 252)/H$		$2X (0.14p_2 + 252) X100/H$	
12043.W0016	$2X (0.50p_1 + 900)/H$	20	$2X (0.50p_2 + 900) X100/H$	2000
12044.W0016	$2X (0.30p_1 + 540)/H$		$2X (0.30p_2 + 540) X100/H$	
12045.W0016	$2X (0.30p_1 + 540)/H$	20	$2X (0.30p_2 + 540) X100/H$	2000
12043.W0021	$2X (1.00p_1 + 1800)/H$		$2X (1.00p_2 + 1800) X100/H$	
12044.W0021	$2X (0.60p_1 + 1080)/H$	20	$2X (0.60p_2 + 1080) X100/H$	2000
12045.W0021	$2X (0.60p_1 + 1080)/H$		$2X (0.60p_2 + 1080) X100/H$	

Calculation Example

- Vertical mounting
- 4 pcs of 12044.W0016 (height 125mm)
- Pitch:
 $p_1 = 500\text{mm}$
 $p_2 = 300\text{mm}$
- Workpiece centre: $H = 225\text{mm}$
- F direction cutting force: 3kN
- Workpiece weight: 375kg

<Allowable Cutting Force F>
 $F = 2x(0.3X p_1 + 540)/H$
 $= 2x(0.3X 500 + 540)/225$
 $= 6.13\text{kN}$

*) Cutting force 3kN is within allowable value (6.13kN).

<Allowable Workpiece Weight W>
 $W = 2x(0.3X p_2 + 540)X100/H$
 $= 2x(0.3X 300 + 540)X100/225$
 $= 560\text{kg}$

*) Workpiece weight 375kg is within allowable value (560kg).

Height-W12043-A-T-W12049.5-b-rnh - Updated - 21-10-2022

Installation Instructions Modular Clamping System

Mounting-Hole Dimension

Use 12048.W02xx tapered bushing (precision) for precise locating.

Use 12048.W01xx tapered bushing (standard) for rough locating.

Part Number	d ₁ (H7)	Lf	M	P ₁
12043.W0008	8	5.5	M 6X1	42
12043.W0011	12	5.5	M 8X1.25	50
12043.W0016	18	6.5	M 12X1.75	75
12043.W0021	22	8	M 16X2	100

Spacing Tolerance

Spacing tolerance for 12048.W02xx tapered bushings (precision) should be ± 0.02 .

Spacing tolerance for 12048.W01xx tapered bushings (standard) should be ± 0.01 .

Tightening Order

Note: For 12043.W0008, use 2 pieces of round tapered clamping screw. Tighten these 2 screws in the same order to maintain the locating repeatability.

Tighten the locking screws in order of

- ① Round tapered clamping screw
- ② Diamond tapered clamping screw
- ③ Clamping screw
- ④ Clamping screw

Clamping Module - Double unflanged

How To Use

Note: For 12043.W0008, 12044.W0008 or 12045.W0011, use 2 pieces of round type.

Round Type

- Can be used for locating 12044 clamping module (double).
- Can be used for locating a workpiece with diamond type.

Diamond Type

- Can be used for locating a workpiece with round type.
- Fix the tapered bushing of diamond type after deciding the direction.

Application Example

How To Use

- Use 12048.W02xx tapered bushing (precision) for precise locating.
- Use 12048.W01xx tapered bushing (standard) for rough locating.

Mounting Hole Dimension

Part Number	d ₁ (H7)	l ₁	d ₂	h ₁
12049.W0012	12	5.5	M 8X1,25	50
12049.W0112	12	5.5	M 8X1,25	50
12049.W0019	18	6.5	M12X1,75	75
12049.W0119	18	6.5	M12X1,75	75
12049.W0024	22	8	M16X2	100
12049.W0124	22	8	M16X2	100

* The tolerance of dimension 'd₁' for tapered bushings (standard) should be ${}_{0}^{-0,1}$

Spacing Tolerance

Spacing tolerance should be $\pm 0,02$ for tapered bushings (precision).

* Spacing tolerance should be $\pm 0,1$ for tapered bushings (standard).

Layout

Use 12049.W00xx for tightening from right side, 12049.W01xx for left side.

Clamping Modules for Vertically Mounted Fixtures

12049

Clamping & Height Setting

Clamping Modules for Vertically Mounted Fixtures

Firstly tighten the hook type clamping screw.

The first one becomes reference.

The products should be positioned as shown below.

12049.W03xx, 12049.W01xx and 12049.W02xx tapered clamping screws and 12048.W02xx tapered bushings (precision) should be used together, and 12049.W04xx and 12049.W05xx clamping screws and 12048.W01xx tapered bushings (standard) should also be used together.

Application Example

Note: Do not remove the hoists until the unit fully clamped.

Example 1

Example 2

Example 3

BORE CLAMPING

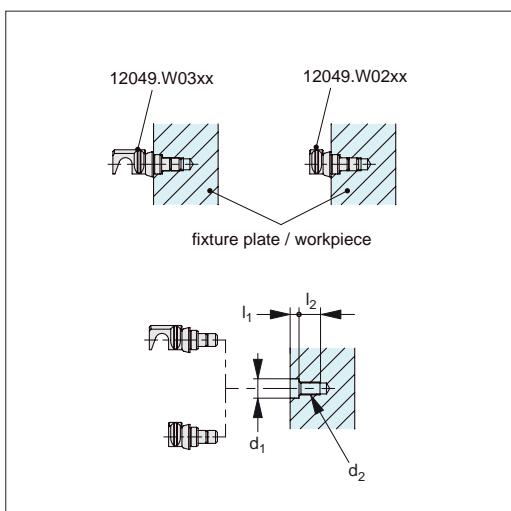

ov-W12049.1-A-T-W12049.5-A-T-clamping-modules-vertically-mounted-fixtures-rmh - Updated - 21-10-2022

Clamping Modules for Angle Mounted Fixtures

- Each clamping screw has commercially available O-ring to prevent rotation and keep the direction of arrow marking.
- O-ring should be replaced by the customer when it is worn.
- Tapered clamping screws can be used for locating fixture plate or workpiece.
- Clamping screws can be used for just clamping.

Mounting Hole Dimension

Part Number	d ₁ *	l ₁	l ₂	d ₂
12049.W0212	12	13	5.5	M 8X1,25
12049.W0312	12	13	5.5	M 8X1,25
12049.W0219	18	19	6.5	M12X1,75
12049.W0319	18	19	6.5	M12X1,75
12049.W0224	22	23	8	M16X2,00
12049.W0324	22	23	8	M16X2,00

* The hole tolerance should always be $\begin{matrix} -0,010 \\ -0,025 \end{matrix}$ when tapered clamping screws are always mounted on the fixture plate. Fixture plate and tapered bushing fit tightly and keep repeatability without chip incursion.

The hole tolerance should be H7 when mounting on workpiece. Tapered bushing can be easily mounted/ removed.

Spacing Tolerance

Spacing tolerance should be $\pm 0,02$ for tapered clamping screws.

**Spacing tolerance should be $\pm 0,2$ for clamping screws.

Installation

1. Fully tighten the clamping screw on fixture plate or workpiece.

2. Turn the screw counter clockwise within one turn until the arrow marking points downward. (There is a gap between clamping screw and tapered bushing)

3. Install the clamping screws into the clamping modules.

Permissible Cutting Force & Workpiece Weight of Clamping Modules (Hook)

Ensure the cutting force and workpiece weight are within the allowable level.

Note: Heavy cutting force in the open direction may cause workpiece move.

2 Modules

Permissible Cutting Force

Permissible Workpiece Weight

Part Number	F ₁ (kN)	F ₂ (kN)	Max (kN)	w ₁ (kg)	w ₂ (kg)	Max (kg)
12049.W0012 / W0112	$(0,24p_1 + 432)/h$	240/h	3,2	240 x100/h	$(0,24p_2 + 432) \times 100/h$	320
12049.W0019 / W0119	$(0,50p_1 + 900)/h$	500/h	6	500 x100/h	$(0,50p_2 + 900) \times 100/h$	600
12049.W0024 / W0124	$(1,00p_1 + 1800)/h$	1000/h	10	1000x100/h	$1,00p_2 + 1880) \times 100/h$	1000

Note: Heavy cutting force in the open direction may cause workpiece move.

4 Modules

Permissible Cutting Force

Permissible Workpiece Weight

Part Number	F ₁ (kN)	Max (kN)	w ₁ (kg)	Max (kg)
12049.W0012 / W0112	$2x(0,24p_1 + 432)/h$	6.4	$2x(0,24p_2 + 432) \times 100/h$	640
12049.W0019 / W0119	$2x(0,50p_1 + 900)/h$	12	$2x(0,50p_2 + 900) \times 100/h$	1200
12049.W0024 / W0124	$2x(1,00p_1 + 1800)/h$	20	$2x(1,00p_2 + 1880) \times 100/h$	2000

- 4 pieces of 12049.W0019 (height 63mm)
- Pitch: p₁ = 500mm p₂ = 300mm
- Workpiece center: h = 200mm
- F₁ direction cutting force: 5kN
- Workpiece weight: 600kg

<Allowable Cutting Force F₁>

$$F_1 = 2x(0.5X p_1 + 900)/H$$

$$= 2x(0.5X 500 + 900)/200$$

$$= 11.5kN$$

*) Cutting force 5kN is within allowable value (11.5kN).

<Allowable Workpiece Weight W₁>

$$W_1 = 2x(0.5X p_2 + 900)X100/H$$

$$= 2x(0.5X 300 + 900)X100/200$$

$$= 1050kg$$

*) Workpiece weight 600kg is within allowable value (1050kg).

Calculation Example

12051

Material

Body: mild steel.
Tapered screw: steel, heat-treated (coated to prevent seizing).
12051.W0250: aluminium (7075-T6) .

Technical Notes

For holding parts on an inside diameter, for high density machining on vertical or horizontal mills.
Diameter can range from 4,1mm to a maximum of 250mm!
This product can also be used as an expanding mandrel on a lathe.
Tighten with hex key or hydraulic pull cylinders.
The flange diameter of the base is held to a close tolerance for precision location in a machined pocket.

Tips

d_3 is the minimum diameter the „ d_2 “ dimension can be machined or turned down to.
Mounting screws included.

Important Notes

Installation for clamps 12051.W0010 to .W0051.

- Expand clamp 0,1mm over the relaxed diameter and machine to fit workpiece bore (on lathe or mill).
If using the clamp on a lathe then use the nut provided to tighten the taper screw. This nut is only used to machine the clamp.
- Machine a pocket in the fixture for the close tolerance „ d_1 “ dimension, and drill and tap mounting holes „ d_4 “.
- Drill and tap a hole „ d_5 “ in the centre of

the pocket for the tapered screw.

- A recessed dowel pin can be installed into the flange for extra rigidity if required.
- Range of expansion 0,13 - 0,64mm depending on clamp size.

Installation for clamps 12051.W0077 to .W0250.

- Insert machining locking ring (provided), tighten taper screw and machine clamp to required bore size.
- Release taper screw and remove locking ring prior to any machining of workpieces. Note: 12051.W0175 and W0250 have four mounting holes on PCD as dimension „ d_4 “.

BORE CLAMPING

12052

Material

Mild steel body, with heat-treated tapered screw (coated to prevent seizing).

Technical Notes

For clamping blind holes from 17,8mm to 53mm.

Actuated from the side. The cam shaft and the plunger expand the clamp.

Tips

Actuated by turning a socket head cam shaft on the side which moves a tapered plunger to expand the clamp.

Two versions: one for milling (type: mill) and one for turning (type: lathe).

„d₂“ is the minimum diameter the „d₁“ dimension can be machined or turned down to.

Mounting screws included.

Important Notes

Installation Instructions:

ID Xpansion Clamps are designed for clamping on the inside diameter of a component. To install correctly, please follow the following guidelines:

1. Expand the clamp approximately 0,1mm over its relaxed diameter and machine diameter d₁ to suit bore of the workpiece, either on lathe or mill.

2. If machining the clamp on a lathe use the nut provided, on the back of the clamp, to tighten the tapered screw. This nut is used only to machine the clamp.

3. Machine a pocket in the fixture to the close tolerance of dimension w₁, and depth h₄.

4. Drill and tap mounting holes as per dimension r₁.

5. In the centre of the pocket, drill and tap a hole to dimension d₃ for the tapered screw.

6. For additional rigidity, a recessed dowel pin may be installed into the flange, if required.

ID Xpansion Clamp, Machinable

The ID Xpansion Clamp is the ideal way to hold multiple parts on an inside diameter for machining on your VMC or HMC.

ID Xpansion Clamps can be used to hold components with complex internal shapes, not just plain bores.

These machinable clamps are produced in 10 sizes and can hold internal diameters from 21,8 to 45,5mm.

- Low profile and ideal for secondary operations on lathe parts.
- Easily machined to size on lathe or mill.
- Excellent for palletised setups.
- Allow more parts per workcube or fixture plates.
- Body made of mild steel for machinability.
- Tighten with hex key, hydraulic pull cylinders or speed block.

BORE CLAMPING

Side-Loc Xpansion Clamp
machinable

Wixroyd introduces a new style clamp to its range of ID-Xpansion clamps, the Side-Loc Xpansion Clamp. Actuated by turning a socket head cam shaft on the side, it is ideal for clamping on blind internal diameters. The locking ring provides an accurate preset diameter and rigidity for machining. Like our original ID Xpansion clamps, the Side-Loc Xpansion Clamp has the dead length feature which is critical for close tolerance dimensions.

Clamp activated from the side with a standard hex key.

Designed in two styles, one for milling operations and one for lathe applications; the mill Side-Loc Xpansion Clamp can be machined from 28.4 to 18mm and the lathe version from 53 to 18mm.

Side-Loc Xpansion Clamp, when the component obstructs the clamps tapered screw.

12054

BORE CLAMPING

Material

Steel.

Technical Notes

Versatile manual actuators when combined with our ID Xpansion clamps 12051. Enables clamping of smaller internal diameters and blind holes. Mount corresponding ID Xpansion clamp. Mill type actuator is adaptable and can be used on both vertical and horizontal planes. Once installed the clamp can be actuated with use of an actuator screw (6mm A/F).

Tips

Order ID Xpansion clamp 12051 separately.

Important Notes

Manual actuators for mills and lathes. Introducing another new and innovative workholding system. Specifically designed to clamp on blind internal diameters smaller than our Side-Loc clamps would allow. We took the design a step further, by increasing the functionality to clamp smaller inside diameters. For the mill version the option of holding the workpiece in a

vertical or horizontal plane. By simply mounting our standard ID Xpansion clamps on these manual actuators, or using another style clamp that has a „straight draw“, you can now perform operations that previously required extensive hydraulic/pneumatic cylinders. Mill mounted manual actuators for ID Xpansion clamps are suitable for holding workpieces of very small blind internal diameters.

Installation and Machining of Jaw Profile

12057

Clamping & Height Setting

- Insert O-ring to the groove on top surface of the Flexible Form Holding Clamp 12055.
- Mount jaw 12057 to clamping base, align with locating pins and fix with tapered screw.

Prepare Jaw for Mounting

Machine Jaw

2.1 Loosen the clamping bases cam cylinder fully. Measure dimension of the jaw for machining. Tighten the cam cylinder until each jaw section expands a further 0.15mm beyond desired clamping dimensions.

2.2 Machine the jaw to the contours of workpiece. (Do not machine the jaws beyond the machinable depth – see data tables of jaws 12056 and 12057 for dimension.)

After machining of jaw, loosen cam cylinder of clamp base and load workpiece. Tighten the cam cylinder again to clamp.

Load Workpiece

Note: Do not tighten the cam cylinder without the workpiece set to prevent damage and deformation. Tightening with the torque beyond allowable screw torque will lower the durability of the jaw.

Take note of recommended tightening forces.

Function

- Tapered screw fixes jaw to clamping base and expands the jaws in eight directions for 'pre-holding' of irregularly-shaped workpieces.
- Final 0.15mm clamping stroke of the jaw is activated via the cam cylinder to provide final clamping of workpiece on its internal contours.

- When the cam cylinder is tightened, the tapered screw is pulled down.
- At the same time the 8 jaw sections expand to clamp the internal form of workpiece.

BORE CLAMPING

12061

Material

Body: tool steel (1.2842), blackened.
 Top cone: steel, case hardened, blackened and ground.
 Ball: stainless steel (1.4112), hardened and burnished.
 Tension spring: stainless steel, 1.4310 (AISI 301)

Technical Notes

Suitable for concentric positioning and chucking inside holes with surfaces prone to damage.
 Locking pin for precise ball positioning.
 For deep installation applications, „ d_2 max.“ must be maintained for clearance.
 Repeatability and rotational accuracy,

$\pm 0,025$.

Tips

Suitable for perforated walls prone to damage, machining centres, welding devices, transfer units, assembly units etc.

Body: tool steel, blackened.
 Top cone: case hardened stainless steel 1.4112, blackened and ground.
 Ball: stainless steel, 1.4034. hardened and ground.
 Spring: stainless steel, 1.4310 (AISI 301).

Technical Notes

For deep installation applications, „d₂

max.“ must be maintained for clearance. A locking pin can be used for precise ball positioning.
 Suitable for concentric positioning and chucking inside holes, repeatability and rotary accuracy ±0,025.

Tips

Precise self-centering, providing clamping and positioning of components.

Important Notes

If machining delicate components, see parts 12061.

Internal Centering Clamps

rear actuated, for casts and forgings

Bore Clamping

12072

BORE CLAMPING

Material

Body: tool steel, blackened.
 Top cone: case hardened stainless steel 1.4112, blackened and ground.
 Ball: stainless steel, 1.4034, hardened and ground.
 Spring: stainless steel, 1.4310 (AISI 301).

Technical Notes

Suitable for concentric positioning and chucking inside holes, provided that small

ball impressions can be accepted.
 Pull down version can be actuated from rear either manually, or via pneumatic of hydraulic cylinder attached to thread „d₄“ at rear of clamp.
 For deep installation applications, „d₂ max.“ must be maintained for clearance.
 A locking pin can be used for precise ball positioning.
 Repeatability and rotational accuracy,

±0,025.

Tips

Suitable for; machining centres, welding devices, transfer units, assembly units etc.

Important Notes

If machining delicate components, see parts 12062.

BORE CLAMPING

Self Centering Internal Clamps

**12061, 62 -
12071, 72**
Clamping & Height Setting

The internal centering clamp provides autocentric chucking inside both round and square holes, at the simple turn of a hexagon screw. Precise self-centering is achieved through the expansion of the ring of balls which, during clamping, are pressed outward across a precision cone. As the outer diameter of the clamp changes the balls transmit force between its body and the bore. The clamps are used in machining and welding fixtures, product assemblies and transfer units.

- Easy to use.
- Precise self-centering and downhold clamping minimising tolerance errors.
- 3 or 6 points of clamping for maximum stability.
- Clamping on uneven surfaces, such as casts and forgings.
- Low height clamping element.
- Bore sizes 11 to 102mm.
- Repeatability positioning accuracy $\pm 0,025$ and rotational accuracy $\pm 0,025$.
- Easily actuated by the turn of a screw.
- Clamping of workpieces with perforated walls without distortion.
- Actuation from above or below.

Advantages

Centering

Manual from above

Manual, hydraulic or pneumatic from below

Actuation Models

12061 - for delicate workpieces (non-marking).

12062 - for delicate workpieces (non-marking).

12071 - for cast and more robust workpieces.

12072 - for cast and more robust workpieces.

12074

Material

Steel (AISI 4140), 33-39 HRC, blackened.

Technical Notes

Compact clamps to hold workpiece on an inside diameter. Wedge construction

provides powerful clamping force. Generates both horizontal and vertical clamping force.

Tips

Clamps are suited to holding on cast or

roughed holes. Contact point nature of clamp may result in marking of workpiece. Not recommended for use in accurately finished holes.

32940.1

Material

Body: steel, heat-treated, blackened.
Clamping screw: steel, zincplated.
Spring: stainless.

RoHS compliant
REACH: contains no SVHC materials

Technical Notes

Installation:

- 1) machine bores
- 2) insert shaft clamp
- 3) expand jaws to appropriate dimension of the part to be clamped
- 4) position the shaft
- 5) clamp it using the working tool

The thread d_3 serves to hold the assembly tool (optional).

Tips

For clamping shafts, axles, columns, bolts, bars, pipes etc. (with diameters 6-125mm), quickly and easily.

Stainless Shaft Clamps

for cylindrical parts

Shaft Clamping

SHAFT CLAMPING

12098

Material

Bolt: stainless steel, heat treated
 Bushings: alloy steel (4140), Rc 58-60, black oxide finish
 Endmill cutter: stainless steel, heat treated
 Install tool: stainless steel, heat treated

Technical Notes

**Please note: max. clamping force is typically 0,33kN. force for every 1 Nm. of torque, and is dependent upon workpiece material.

Max torque:

With bushing 20 Nm.
 Alu/brass (without bush) 20 Nm.
 Mild steel/ stainless steel 27Nm.
 Metals HRc 45 20Nm.
 See technical pages.

Tips

Ideal low cost quick component and fixture change. Use in conjunction with location pins 36340 and drill bushes 30800 for fast and accurate positioning. Provides repea-

tability to 0,01mm.

Time saving solution, removing the need for traditional bolts whilst reducing tooling interference from traditional clamping methods.
 Ideal for high speed machining of components.

Important Notes

See installation guidance sheet for correct installation procedure.

Expanding Loc-Down Bolts for quick component clamping

Pull Back Inserts

PULL BACK INSERTS

Expanding Loc-Down Bolt applications

PULL BACK INSERTS

Installation Guidance

1. Drill and tap blind hole to thread d_1 depth of l_1 .
2. Thread must be to a minimum depth l_2 and a blind hole.
3. Blind hole must be flat to ensure proper actuation of bolt.

Preparation of Fixture

Loc-down Bolt	Size	d_1	l_1	l_2 min.
12098.W0010	M10	M10 x 1,5	22	18
12098.W0012	M12	M10 x 1,75	22	18
12098.W0016	M16	M10 x 2	27	22

Preparation of Fixture

1. Drill through hole, dimension 'f'.
2. Using endmill cutter, (please order separately), touch off on bottom of workpiece and drop tool to dimension 'g'. Now cut a groove to diameter 'e'. Please refer to table of endmill cutter starting feeds and speeds for different materials.
3. Countersink 0.8mm x 90°. See "direct workpiece without bushing preparation" chart below.

Preparation of Workpiece Option 1

Loc-down Bolt	Size	h_3	w_1	d_7
12098.W0010	M10	12,5 - 12,7	9,9	11,43
12098.W0012	M12	15,9 - 16,0	13,0	11,73
12098.W0016	M16	20,6 - 20,9	16,5	15,09

Preparation of Workpiece Option 1

without bushing direct into workpiece.

Endmill Cutter Starting Feeds and Speeds

Material	Feed	Speed
Aluminium	25 IPM	3,000 rpm/1 radial pass
Hard metals	1 IPM	1,200 rpm/3 equal radial passes

1. Drill through workpiece to dimension 'c'. Deep countersink hole of diameter "a", leaving material on bottom of thickness 'b' (i.e. mounting) surface of workpiece.
2. Install loc-down bushing (please order separately), ensuring bottom of bushing is flush with base of counter sink hole.
3. On deep holes, consider counter bore for dimension "a" for easier bushing installation.
4. This is a press fit installation, metal is displaced. The OD of the bushing is knurled, to aid in retention, and minimize bushing and part distortion. Using bushing installation tool 12098.W0535 (order separately) provides properly seated bushing installation, without damage to the bushing.

Preparation of Workpiece Option 2

with loc-down bushing (especially for soft materials).

Preparation of Workpiece Option 2

Loc-down Bolt	Size	Loc-down Bushing	Endmill Cutter	d_7	h_5	d_9	h_4
12098.W0010	M10	12098.W0110	12098.W0510	18,00/18,02	2,0	10,3/10,5	10,0

installation instructions one

remove the top screw, expand the bottom half slightly by turning the setscrew, and insert the dowel into the locating hole of the base plate. Hold the dowel with a plier or other tool and tighten the setscrew to fix the bottom half

installation instructions two

replace the top screw, slide the locating hole of the fixture plate over the dowel, and expand the top half with a hex wrench

12058

PULL BACK INSERTS

Material

Stainless steel (17-4PH) or steel (12L14). Pin and screw supplied together. Replacement pins can be ordered separately, see parts 12058.W5030-W5060. Supplied as one pin and one tapered screw.

Technical Notes

XYZ Xpansion pins provide a cost-effective workholding solution for tombstones, grid and fixture plates, enabling full tool access to the work surface with no external clamping interference.

Unique design provides accurate location and repeatability with high holding forces to secure parts on an internal diameter.

Press-fit XYZ Xpansion pins are for installation into a precision bored hole, with a centred threaded hole to receive tapered screw.

Easy to use installation/removal tool available, please order separately.

Tips

Designed for applications requiring quick set-up on secondary operation, water jetting or even non-machining applications where discrete location and clamping of parts is required.

Important Notes

Clamping of component achieved via tight-

tening of tapered screw to expand the XYZ pin collet; expansion of 0,7mm is possible. The top of the pin has been slightly tapered to maximise line contact in the mounting bore and to provide adequate clearance during workpiece loading and unloading. If recessing pin into a fixture at a depth below the collet slits, be sure to provide sufficient clearance to allow for expansion of clamp (approx. 0,7mm).

d_{1 min.} is the minimum diameter to which the pin can be machined down. The tapered screws listed on the data table are for replacement purposes.

12059

Material

Stainless steel (17-4PH, AISI 630) or steel (12L14). Pin and screw supplied together. Replacement pins can be ordered separately, see parts 12059.W5010-12059.W5020. Supplied as one pin and one tapered screw.

Technical Notes

XYZ Xpansion pins provide a cost-effective workholding solution for tombstones, grid and fixture plates, enabling full tool access to the work surface with no external clamping interference. Unique design provides accurate location and repeatability with high holding forces to secure parts on an internal diameter. Threaded XYZ Xpansion pins are installed

via a drilled and reamed hole for precise location, or set in a hardened drill bush for additional fixture strength and wear resistance. d_2 tolerance $+0.00/-0.025$.

Tips

Designed for applications requiring quick set-up on secondary operation, water jetting or even non machining applications where discrete location and clamping of parts is required.

Important Notes

Clamping of component achieved via tightening of tapered screw to expand the XYZ pin collet; expansion of 0,7mm is possible. The top of the pin has been slightly tapered to maximise line contact in the mouting

bore and to provide adequate clearance during loading and unloading of workpieces.

If installation pin in a precision bore, drill and ream the hole over the nominal diameter d_2 by minimum $+0,003$ to $+0,013$ mm.

If recessing pin into a fixture at a depth below the collet slits, be sure to provide sufficient clearance to allow for expansion of clamp (approx. 0,7mm).

d_2 min.* is the minimum diameter to which the pin can be machined down.

The tapered screws listed on the data table are for replacement purposes.

Order No.	Type	l_1	d_1	d_2 $+0.00 -0.025$	d_2 min.*	d_3	h_1	h_2	h_3	h_4	Weight g

12059.W5010	Tapered Screw	30	-	-	-	M 6x1,00	-	-	-	-	9.1
12059.W5020	Tapered Screw	30	-	-	-	M 8x1,25	-	-	-	-	14

Expansion pins are the ideal solution for securing parts on the inside diameter on tombstones, grid and fixture plates.

The unique design achieves accurate location, repeatability and high holding forces for securing parts and provide discrete workholding and full accessibility to the work surface with no external clamping interference.

Location accuracy is achieved through the close tolerance between the Xpansion pin's locating diameter and busing internal diameter. The top of the pins have a slight taper to maximise line contact in the bore, and to provide clearance during loading and unloading.

Pins expand up to 0.7mm, with the pin's diameter machinable to your specific application.

Ideal for quick set-up on secondary operation, water jetting operations, or even applications outside of a machining centre.

Available in long threaded version, or shorter press fit model. Serrated and smooth finish in both M12 and M16 threads.

PULL BACK INSERTS

Design simple fixture plate with Xpansion pins located to suit your component, the same hole spacing will be used in the workpiece/raw stock for mounting bolt holes.

Install the Xpansion pin into the fixture plate.

Install the Xpansion pin's tapered drive screw into fixture plate.

Easy to Install

Load workpiece raw stock onto Xpansion pins and tighten tapered drive screws to clamp.

Run first operation – note the clear tooling path possible with no noticeable external clamping interference.

- Flip the part and locate on the same Xpansion pins for operation two.
- Xpansion pins provide a quick, accurate and low cost fixture solution.

ov-W12058-A-T-W12059-A-T-XYZ-xpansion-pins-rmh- Updated -24-10-2022

12085.1

Material

Body/shank: steel (SCM440), black oxide finish.

Tapered pin: steel (SCM440), nitrocarburised.

Handle: die-cast zinc (ZDC1), silver-grey painted.

Pin: stainless steel (AISI 303, 1.4305).

Technical Notes

The lifting force is the power of the inner spring of the body to push up the moveable tapered pin.

One Touch Flex Locator Clampers

how to use

12085

Clamping & Height Setting

Feature

- The plates are located by fitting the tapered pin and the tapered bushing.
- The pin contacts the cam surface inside the bushing, and it compresses the inner spring, then the plates are clamped.

Note: 12085.W0108 does not have locating function.

Two clamping and unclamping positions of handle can be chosen for 12085.W0008/W0108

How to Operate

1. Ensure the handle is positioned at 'OFF' mark.

*Follow back these steps for unclamping

*Same operation for knob style.

2. Insert the clamber to the bushing.

3. Turn the handle to 'ON' mark for clamping.

PULL BACK INSERTS

ov-W12085.1-A-T-W12085.3-A-T-how-to-use-one-touch-flex-locators-a-rnh - Updated -24-10-2022

Tightening Order

Ensure the handle is positioned at 'OFF' mark and lift down the fixture plate.

Turn the handle and clamp in order of **1 - 2 - 3 - 4**

*For unclamping, ensure the handle is positioned at 'OFF' mark and disassemble the fixture plate.

If the handles are not tightened in the correct order, the locating repeatability may exceed 10 µm.

How to Use

Horizontal Assembly of Fixture Plate

Note: Ensure not to lift the fixture plate up and down with gripping the handle of the clammers.

Vertical Assembly of Fixture Plate

Note: Locating repeatability is 10 µm.

Clamp and Bush Combination		Max. Loading Capacity (N)
12085.W0206	Ø6	120
12085.W0008	Ø8	400
12085.W0108	Ø8	400
12085.W0208	Ø8	400

Note: The maximum load is the entire sum of the load of fixture plates, fixtures and workpieces.

The maximum loading capacity shown is the value when two sets of tapered clammer and tapered bushing are used.

12090

PULL BACK INSERTS

Material

Steel version: heat treated steel, tempered and blackened.

Stainless steel version: precipitation hardened stainless steel (17-4PH, AISI 630).

Technical Notes

By tightening the clamping screw, the

positioning clamping pin is centered and clamped via the four balls, into the locating bush.

The clamping screw can be operated manually via a removable handle or hex. key.

Tips

For removable handle see part no. 12091.

Important Notes

The positioning clamping pin allows fast clamping, fastening, adjusting, changing and securing of workpieces, plates, fixture systems etc.

By tightening the clamping screws, the positioning clamping pin is centered and clamped with four balls in the locating bush. The clamping screw can be operated manually via a removable handle or via a hex. key.

Advantages

Overview

- Advantages of initial spring tension:
 - Abrasion resistant.
 - Clamping ball and location hole are protected from overload.
 - No seizing of the pin through overloading.
 - Reduces vibration during machining.
 - Eliminates unintentional unlocking of the system (e.g. due to system vibration).
- High repeatability of $\pm 0.03\text{mm}$.
- Simple installing /uninstalling using a spanner faces and knurling.
- Low construction height.
- Operation via hex. key or optional handle.

Locator Unit - Standard

Pull Back Inserts

12095.1

PULL BACK INSERTS

Material

Heat-treated steel, alloy with black oxide finish. High tensile strength (180 000+ PSI or 1241 MPa) and hardness (46 HRC).

Technical Notes

Easy locating - installs and locks in

seconds, offers ± 0.0004 " repeatability.

Tips

The exclusive self-extracting mechanism eliminates the need for prying, pounding or using jack screws to separate fixture and base plates. It enables the locator unit to

be easily removed from counterbored installations.

Quick and Easy to Use with Every Load

The Wixroyd Precision Locating & Mounting System consists of locators, receivers and bushings for a wide range of tooling, fixturing, workholding, production, welding and assembly applications. They offer the ability to make fast, accurate set-up changes which enables significant improvements in machining productivity, throughput rates, quality and reduced operating costs.

Wixroyd has solved the typical problems associated with precision attachment and removal of fixture plates, tooling and accessories. The Wixroyd system eliminates the need to pry, pound and use jack screws to separate the fixture plate from the sub-plate or machine table. The Wixroyd system uses a threaded fastening device to mechanically extract the precision locator from its receiver, allowing easy separation of fixture plates, tooling and accessories. Unlike competitive ball locking products, the Wixroyd system does not require expensive "repair kits" since there are no rubber o-rings to break nor ball bearings to fall out or fracture.

- Place fixture plate over sub-plate or machine table containing the Wixroyd receivers.
- Insert two Wixroyd precision locators through holes lined with hardened bushings and into the receivers.
- Insert two remaining locators into unlined holes and tighten to draw each locator to the desired torque.
- Total time require to unload existing fixture plates and load a new fixture plate is typically under 2 minutes.

- Self- extracting – unique design enables easy and quick "self-extract" from tooling, fixturing etc. There is no binding or other issues to delay removal time or compromise accuracy of the locking system.
- Precise locating – repeatability of +/- 0.0004"
- High clamping strength – over 45,000 lbs
- Easy Installation – easily installed in a wide range of applications using standard tooling and machining practices.
- Compact – requires minimal space in tooling and fixture applications. Both standard and compact/flush mounting options.
- Can be retro-fitted with existing competitive ball lock type systems.

System Overview

12097.W2131 to .W2501 -
Face mount compact
receivers - compact

Precision Locating and Mounting System

FAQs

- Q. What is the Wixroyd Precision Locating & Mounting System?**
 A. It is a means of locating and locking two flat surfaces together. These surfaces are most commonly a fixture plate and sub-plates, however, they are also used in many other applications because of their holding strength and accuracy.
- Q. How does it locate the fixture plate?**
 A. The Wixroyd system locates with receivers in the base plate, liner bushings in the sub-plate and locator/fasteners locking the two surfaces together.
- Q. How many locators are needed to locate and fasten the fixture plate?**
 A. Two locators with liner bushings are required to accurately position and two locators without liner bushings to fasten only.
- Q. How does it fasten?**
 A. Locators use standard threads to hold the two surfaces together. By tightening the locators into the receivers very high holding forces can be achieved.
- Q. Can the Wixroyd system be mounted so the work pieces mounting surface is free from any interference?**
 A. Yes, our compact of flush locators allow the head to lie flush with the fixture plate surface.
- Q. Can the system be used in high temperature applications?**
 A. Yes, because all parts are made from heat treated alloy steel, temperatures up to +500F are not a problem. The user should account for thermal expansion of the fixture plates and bases that could affect tolerances.
- Q. Can Fixture plates be mounted in both the horizontal and vertical positions with the Wixroyd system?**
 A. Yes, in vertical mounting applications Wixroyd offer optional docking hardware to “hang” the fixture plate from the tooling column before fastening the surfaces together.
- Q. Can a current ball locking type system be retrofit to work with the Wixroyd system?**
 A. Yes, the universal bolt-in receiver will fit directly into the pocket that holds ball locking type receivers. Also, the Wixroyd system locators will fit the existing holes and liners of a fixture plate set up for ball locking systems.

Applications

Standard locators

Flush mount locators

12096.1

PULL BACK INSERTS

Material

Alloy steel, hardness 62+ HRC.

the integrated locator unit system (part no. 12095), achieving precise and accurate machining results.

Screw Jack Set with Spacers

aluminium and steel

Screw Jacks

14130

SCREW JACKS

Material

Body: aluminium.

Spindle: steel, heat treated with trapezoidal self-locking thread.

Technical Notes

Thread protected against swarf ingress.

For individual parts and to make up greater heights please see no. 14140.

Set contents:

- 1 x main screwjack
- 1 x large spacer (25,0mm)
- 1 x small spacer (12,5mm)
- 1 x aluminium base
- 1 x magnetic base

Tips

Max. static load (kN.) applies up to

maximum height of 350mm. Do not use above these heights.

Main screw jack has a centering hole Ø12mm, for fitting of support and positioning pads nos. 15030 - 15080.

Important Notes

Do not adjust screw jack under load.

Order No.	h_1 min.	h_1 max.	d_1	d_2	d_3	Static load kN max.	Weight g
14130.W0001	75	125	50	12	30x4	30	920

SCREW JACKS

14140

Material

Body: aluminium.

Spindle: steel, tempered with trapezoidal self locking thread.

Tips

Individual parts can be combined to create

screw jacks of varying heights (maximum 350mm).

Max. static load (30kN.) applies for heights up to 350mm, above which there is danger of buckling.

Important Notes

Do not adjust screw jack under load.

Order No.	Type	h_1	h_2 min.	h_2 max.	d_1	d_2	d_3	d_4	d_5	d_6	Static load kN max.	Weight g

Screw Jacks

plain Ø12 centering hole

Screw Jacks

15000

SCREW JACKS

Material

Body: carbon steel, enamelled.
Spindle: steel, tempered.
Trapezoidal thread, self-locking with end stop.

Technical Notes

Light duty: for clamps with slot widths up to 14mm.

Medium duty: for clamps with slot widths approx. 14-22mm.

Heavy duty: for clamps with slot widths between 20-40mm.

Extra heavy duty: for supporting larger work-pieces.

Tips

Centering hole Ø12mm in top of screw

jacks (no hole on part no. 15000.W0050).

When using in conjunction with forked clamps no. 10100, we recommend the use of locating pad no. 15060.

See technical pages for the table of locating pad and support pad elements suitability.

Screw Jacks

threaded M12 centering hole

Screw Jacks

15002

SCREW JACKS

Material

Body: carbon steel, enamelled.
Spindle: trapezoidal thread, self-locking with end stop.

Technical Notes

The threaded centering hole (M12) on the

top surface of the screw jack enables secure fixing of support accessories 15042 and 15062, whilst the M38x2 base thread allows expansion of the screw jack height.

Tips

For table of support and locating element

compatibility see technical pages.

Important Notes

Do not adjust screw jack when under load.

Order No.	Type	Size	h_1 min.	h_1 max.	d_1	d_2	d_3	d_4	d_5	Static load kN max.	Weight g

15100

Material

Body & base: aluminium 400 N/mm² tensile strength.

Spindle: steel, tempered.

Trapezoidal thread, self-locking with end stop.

Technical Notes

See technical pages for the table of loca-

ting pad and support locating element suitability.

Greater heights can be achieved by combining screw jacks with the centering support pad no. 15060.

Tips

The swarf is absorbed into the aluminium base thereby protecting the machine table.

Particularly useful for delicate machine tables and high precision machines.

Important Notes

Do not adjust screw jacks under load.

Order No.	Size	h_1 min.	h_1 max.	d_1	d_2	d_3	d_4	Static load kN max.	Weight g

Screw Jacks

aluminium - magnetic base

Screw Jacks

15120

SCREW JACKS

Material

Body: aluminium 400N/mm² tensile strength.
 Base: magnetic.
 Spindle: steel, tempered.
 Trapezoidal thread, self locking with end stop.

Technical Notes

See technical pages for the table of locating pad and support locating element suitability.

Tips

Allows for positioning of screw jacks on

both horizontal and vertical surfaces.
 Greater heights can be achieved by combining the screw jacks with the centering pad no. 15060<X\15060#22>.
 Magnetic base ensures precise positioning of workpiece on vertical faces.

Order No.	Size	h_1 min.	h_1 max.	d_1	d_2	d_3	d_4	Static load kN max.	Weight g

SCREW JACKS

15200

Material

Body: steel, tempered.
Spindle: M30x1,5 fine thread with end stop.

Technical Notes

Comes with 2 locating pins (Ø12x50 and

Ø12x80). Centering hole Ø12 mm. The M30x1,5 fine thread makes precise adjustment possible whilst preventing the workpiece from turning.

See technical pages for the table of locating pad and support locating element

suitability.

Tips

A bearing insert prevents the workpiece turning whilst the jack is adjusted.

With the modular screw jack your production becomes even more flexible and economical. When combined you can achieve a maximum height of 1620mm.

Benefits

- Maximum height of 1620mm.
- Quick set-up time.

The Elements

- 1 Bearing pads, 15374.W0075, 15374.W0175, 15374.W0275
- 2 Screw jack, 15370.W0040, 15372.W0023
- 3 Spacer, 15370.W0116, 15370.W0126, 15370.W0135
- 4 Base, 15370.W0236, 15370.W0356, 15370.W0456
- 5 Thread adapter, 15374.W0016, 15374.W0020, 15374.W0024

15370.1

SCREW JACKS

Material

Steel, tempered, burnished.

Technical Notes

Can be used on T-slots and grid plates by means of adapters which are screwed in the base element. The individual elements are

joined together and connected by means of a threaded ring. The insertion tool makes it possible to use the locknut and base element as well as a thread adapter.

Tips

Can be used with other elements to achieve

heights of up to 1.6 metres, with a max. load of 60 kN. Observe possible buckling loads.

Do not adjust screw jacks under load.

Order No.	h_1 min.	h_1 max.	h_2 min.	h_2 max.	h_3	d_1	d_2	d_3	A/F	F kN max.	Weight g

Modular Screw Jack Base adjustable

Screw Jacks

15370.5

SCREW JACKS

Material

Steel, tempered, burnished.

Enables easy positioning on a machine table.

Technical Notes

Can be used on T-slots and grid plates.

Order No.	h_1	h_2	h_3	w_1	w_2	d_1	d_2	l_1	l_2	l_3	Weight g
15370.W0456	106	56	20	158.5	20	90	42.5	240	195	17	5652

15372

Material

Body and base: steel, tempered, burnished.
Spindle and bearing: steel, tempered, plasma-nitrided and burnished.

Technical Notes

Can be used on T-slots and grid plates by means of adapters which are screwed in the base element with a spacer element. This

support can be finely adjusted to a maximum height of 330mm under load. The bearings can be adjusted with an angle of $\pm 3^\circ$. Used as an extra support point to prevent sag and vibration of the workpiece. As it is mounted directly under a clamping point, distortion of the work-piece is prevented.

For use in horizontal and vertical clamping.

Tips

Maximum height 330mm when used with additional spacer 15370.W0116.

Three different bearings are held in place by magnets. Bearings are interchangeable.

Order No.	h_1 min.	h_1 max.	h_2	d_1	d_2	Stroke h_3	F kN max.	Weight g

These screw and aligning jacks offer a broad range of applications. Due to their robust construction, the screw jacks function securely and precisely, with infinite adjustment even under heavy loads.

- Safe and reliable clamp supports for heights from 38 to 1250mm.
- Accurate and safe supporting and setting of any workpiece in various levels and heights.
- Aluminium screw jacks for delicate machine tables, surface plates and CMM tables.
- Magnetic screw jacks for horizontal and vertical supporting and setting.

Locating Pad - Pivot Ball for screw jacks

Screw Jacks

15090

SCREW JACKS

Material

Pad: steel, tempered.
Ball: steel, hardened.

Technical Notes

Designed for use with screw jacks and for

supporting heavy duty cast iron and forged parts.

Tips

The pivot ball minimizes the friction on the support. The use of a point-like support

reduces the transmission of the turning force generated by the machine spindle. See technical pages for the table of screw jack suitability.

Parallel Support Pairs - Set standard precision - in wooden stand

Supports & Stops

17212

SUPPORTS & STOPS

Material

Steel, case hardened and finely ground in pairs.

Technical Notes

Machined in parallel and square. Set incre-

ments are 1mm.

Standard precision version (see part no. 17200 for full tolerances). For high precision model, see parts 17211.

Tolerances:

h_1 (height) pair tolerance $tp =$ to ITS.
 h_1 (height) and w_1 (width) standard (single) tolerance to DIN ISO 2768m.
 All other dimensions to DIN ISO 2768m.

Order No.	Contents (1 pair each) $w_1 \times h_1 \times l_1$	Support height in 1 mm increments	Weight g

17220

Material

Steel, ground and case-hardened.
In wooden box with removable lid.

Technical Notes

Dimensions w_1 and l_1 to ISO 2768 medium.
Tolerances - 17220.W0001 (super high precision).
 h_1 (height) pair tolerance $tp = 0,004\text{mm}$.
 h_1 (height) standard tolerance $tp = \pm 0,004\text{mm}$.

Other dimensions to DIN ISO 2768m.

Tolerances - 17220.W0000 (standard precision).
 h_1 (height) pair tolerance $tp = 0,010\text{mm}$.
 h_1 (height) standard tolerance $tp = \pm 0,004\text{mm}$.

Tips

Indispensable for parallel support of components in vices and plates. Their high

degree of accuracy allows the combination of sizes.

Part no. 17220.W0000 is exactly the same as 17220.W0001, but is a lower cost, and lower toleranced set.

Matched sets can be supplied on request for an extra charge.

Order No.	Contents (pairs) $h_1 \times w_1 \times l_1$	h_1 Standard tolerance	h_1 - Pair tolerance tp	Weight g

17320

SUPPORTS & STOPS

Material

Steel, case-hardened and finely ground in pairs.

Technical Notes

The thickness of these parallels matches the slot width on machine tables (tolerance H8).

range H8).

Tolerances:

h_1 (height) pair tolerance $tp = IT5$.

h_1 (height) standard (single) tolerance to DIN ISO 2768m.

w_1 (width) standard (single) tolerance = h7

Other dimensions to DIN ISO 2768m.

Tips

Ideally used for stops on small and medium machines. They allow rapid alignment of the workpiece to the table.

Order No.	h_1	l_1	Pair tolerance h_1 tp	Standard tolerance h_1 DIN 7168m	w_1	w_1 tol. h7	Weight/pair g

17403

SUPPORTS & STOPS

Material

Low carbon steel, precision ground square.
Mounting screws included.

Technical Notes

The locating rails can be machined and are ideal for using with our machinable

clamps.

Important Notes

1. Mill a slot to locate the rail. Depth of slot will determine rail height.
2. Drill and tap the required holes.
3. For better rigidity the rail should be

4. If rails are to be machined to hold round pieces, the clamps should be mounted and both rail and clamps machined at the same time.

Order No.	w_1 +0.00 -0.01	d_1	h_1	l_1	l_2	l_3	l_4	No. of holes	Weight g

11090

Tips
Eliminates workpiece chatter and vibration during machining.

Easy to actuate; locate and fix beneath workpiece, turn actuation handle and sprung loaded support will come into

contact with workpiece. Lock handle to set support.

Order No.	Support height	w_1	d_1	l_1	l_2
11090.W0060	28	45	6	56	20

12540

SUPPORTS & STOPS

Material

Individual parts: steel, blackened.
 Ball knob: duroplast (PF 31) DIN 7708, red.
 Housing: thermoplastic, black.
 Additional parts: steel, blackened.

Technical Notes

Travel path/movement of approach 10mm, during which no clamping takes place.
 Within the quick clamp travel of 2mm, self-

locking occurs in any position. Maximum clamping force allowed 4,9 kN.

Through Axle Type:

Due to the cam axle running across the diameter of the pressure sleeve, depth of the pressure sleeve is limited to 31mm.

Through Hole Type:

Depth of the pressure sleeve is not limited and is equal to equal to 45,5mm. Moun-

ting: via six M 6 x 9 threaded holes on its base.

Tips

A compact clamping element for pull and push clamping which can be actuated by turning the tension cam.

Used with:

12540.W0042 - W0046 Clamping devices.

Order No.	Type	Description	Clamping force kN max.	Weight g
12540.W0002	Through axle	Right push/left pull	4.9	751
12540.W0004	Through axle	Left push/right pull	4.9	749

12540.W0044	Accessories	Taper	-	85
12540.W0046	Accessories	Vee-block	-	82

12680

Material

Body: steel case-hardened, nitrided, blackened and ground.
Housing: aluminium, red anodised.

Technical Notes

Used to support over determined clamping points, whilst minimising deformation of component. It also reduces vibration during machining.

By tuning on the lock function (max. 180° at 15Nm), the clamping mechanism locks the support pin without moving. The support element has supported the work-piece and is locked in place.

Tips

Assembly:

Fix the support element (2x M6 thread) onto the device. Ensure the key activation is in required orientation.

Alternatively: Dismantle the M12 x 10 threaded pin and replace it by an M12x 30 threaded pin and assemble the support element with a spanner (A/F 21), e.g for T-slot mounting (no pin M12x 30 and T-nut 24000 M12x 14, grade 10, are parts of the standard supply volume. The support element can be recessed into a hole max. 16mm deep.

Operation:

By turning the clamping cam (A/F 6 internal hexagon) on the outer surface of the re protective sleeve, the support pin contacts the workpiece with a slight spring

load.

1. By turning on (15Nm) as far as possible (lock), total of 180°, the clamping mechanism locks the support pin without moving. The support element has been placed onto the workpiece and locked.
2. If turned in the opposite directions (unlock), the clamping is released. If turned back as far as possible, i.e. total of 180° the support pin moves to the end position.

Order No.	Description	Stroke	Supporting force kN max.	Weight g
12680.W0400	Support Element	5	8	950

15500

Material

Spheroidal graphite, cast iron.
Heat treated and burnished.
Contact surfaces precision machined.

Technical Notes

Centering hole $\varnothing 12\text{mm}$.
With loads up to 33% of the max. static

load, adjustment is easily made with a turn of screw. Allows fine adjustment to 0.1mm. See technical pages for the table of locating pad and support pad elements compatibility.

Tips

Particularly useful for precise positioning

and machining of large components on heavy duty machines. If necessary, an additional $\varnothing 12\text{mm}$ locating hole in the base allows the wedge blocks to be located.

Order No.	Size	w ₁	h ₁	h ₂ min.	h ₂ max.	d ₁	h ₃	l ₁	Static load kN max.	w ₂	A/F	Adj./ 360°	Weight g

Workpiece Supports

for support and to prevent workpiece chatter

Supports & Stops

17000

SUPPORTS & STOPS

Material

Support: steel, case-hardened and ground.
Grip: die-cast zinc.

Technical Notes

Used as support beneath workpieces to prevent chatter and vibration.

The supporting pin is applied with spring pressure to the workpiece and can be clamped in any desired position without the need to reach under the workpiece.

Tips

Additional support to a three-point fixed

support. Threaded studs or levelling pads can be screwed into the female thread to set the required height.

Sizes .W0085 to W0170 have only one slot. 17000.W0450 is fitted with axial bearing clamping lever 74470.W0210.

SUPPORTS & STOPS

Material

Body and piston: steel (S45C), tempered and black oxide finish.
Crank shaft: steel (S45C), black oxide finish.

Technical Notes

Can support heavy workpieces made from

steel or cast iron. No tools needed. The handle position is freely adjustable. The handle can be easily changed to act in a clockwise or anti clockwise direction. Different locating pins can be mounted depending on workpiece's locating holes. The piston stays locked when it is fully

extended or retracted until the handle is operated again.

18863

Material

Forged steel (C15E) annealed and zinc plated. Contact face machined. CE marked.

Technical Notes

To DIN 580.

When using lifting eye bolts it is critical to ensure that the face is in firm contact with the mating surface.

These lifting bolts are generally installed and remain on a piece of equipment for the

purpose of transporting them. They are not for repeated lifting use - if this is required our swivelling lifting bolt range should be used.

Tips

Maximum load values are only applicable when the thread is fully screwed in, and the material it is being used in is as least as strong as the that of the bolt.

Temperature range -20°C to +200°C.

F_1 and F_2 values given are for steel and cast iron components.

Important Notes

Not to be used at lift angles of greater than 45° or with swivelling loads.

Please refer to the safety documentation before using this part.
Supplied with certificate and operating instructions.

Important Note: DIN 580 lifting eye bolts are mainly intended for permanent mounting to components such as motors, switchgear cabinets and gears, and for transporting these items of equipment. Please take care to take particular note of the following advice.

- 1) To be used by authorised, qualified and instructed personnel. Lifting eye bolts must be marked permanently raised with manufacturer's mark, material ID (e.g. C15E, A2 or A4), load-bearing capacity and axial direction (WLL in kg, see also Table/ F in N), and with CE symbol.
- 2) Check the lifting points for proper bolt seat, corrosion, wear and tear, deformation, etc. at regular intervals and before every use.
- 3) Select the lifting point such that the introduced forces are absorbed by the base material without any deformation. Screw-in depth for steel with a tensile strength of $R_m > 340 \text{ N/mm}^2$, e.g. S235JR (1.0037); or GG25 (0.6025 - without cavities or shrinkage): $1.5 \times \text{thread size } d_1 (=L)$. For screw-in material with lower strength, use lifting points with greater screw-in length. Minimum screw-in depths recommended: $2 \times \text{thread size } d_1$ in aluminium alloys, $2.5 \times \text{thread size } d_1$ in light metal with low strength. For light materials, non-ferrous metals and grey cast iron, select the thread such that the load-bearing capacity of the thread corresponds with the requirements involving the base material. For through-holes, a nut ($0.8 \times d$) should be fully and firmly bolted from the opposite side. If the thread length of the screw is sufficient, the use of an additional washer is recommended.
- 4) Select the position of the fixing points to avoid swivel or load shifts.
 - a.) Arrange the lifting point for a single strand sling perpendicular above the load centre.
 - b.) Arrange the lifting points for a twin strand sling to ensure both sides are above the load centre. Caution: Avoid turning or rotating movements during transport!
 - c.) Position the eye bolt such that no shear tension acts on the eye bolt (illustration below, incorrect use). The introduced force must act in the direction of the eye bolt plane (illustration right, correct use).

Stainless Male Lifting Eye Bolts

18846

Material

Forged steel (C15E) annealed and zinc plated. Contact face machined. CE marked. Hot dipped galvanised versions (for more demanding applications and limited outside use) also available on request, suffix changes to -GV.

Technical Notes

To DIN 582.
When using lifting eye bolts it is critical to ensure that the face is in firm contact with the mating surface.

These lifting bolts are generally installed and remain on a piece of equipment for the purpose of transporting them. They are not for repeated lifting use - if this is required our swivelling lifting bolt range should be used.

Tips

Maximum load values are only applicable when the thread and the material, it is being used in is as least as strong as the that of the bolt.

F_1 and F_2 values given are for steel and cast iron components.

Important Notes

Not to be used at lift angles of greater than 45° or with swivelling loads.

**Please refer to the safety documentation before using this part.
Supplied with certificate and operating instructions.**

Vertical Acting Toggle Clamps

open arm - horizontal base

40000.1

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes (sizes 2-6). Pre-lubricated bearings (grease suitable for food industry use).
 Ergonomic, soft feel, oil-resistant handle with large grip area. Supplied complete

with clamping screw (with rubber pad).

Technical Notes

For fastening to mounting plates, etc.
 Opening angle (symbol α /symbol α /symbol α /symbol α *) can be changed by pressing in a stop pin on the clamp body.

Temperature range -10°C to +80°C.

Tips

This product is also available in stainless steel, matt black and ESD.

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes.
 Pre-lubricated bearings (grease suitable for food industry use).
 Ergonomic, soft feel, oil-resistant handle

with large grip area.
 Supplied complete with weldable clamping screw (with rubber pad).

Technical Notes

For fastening to mounting plates, etc. The arm can be shortened to suit the work-

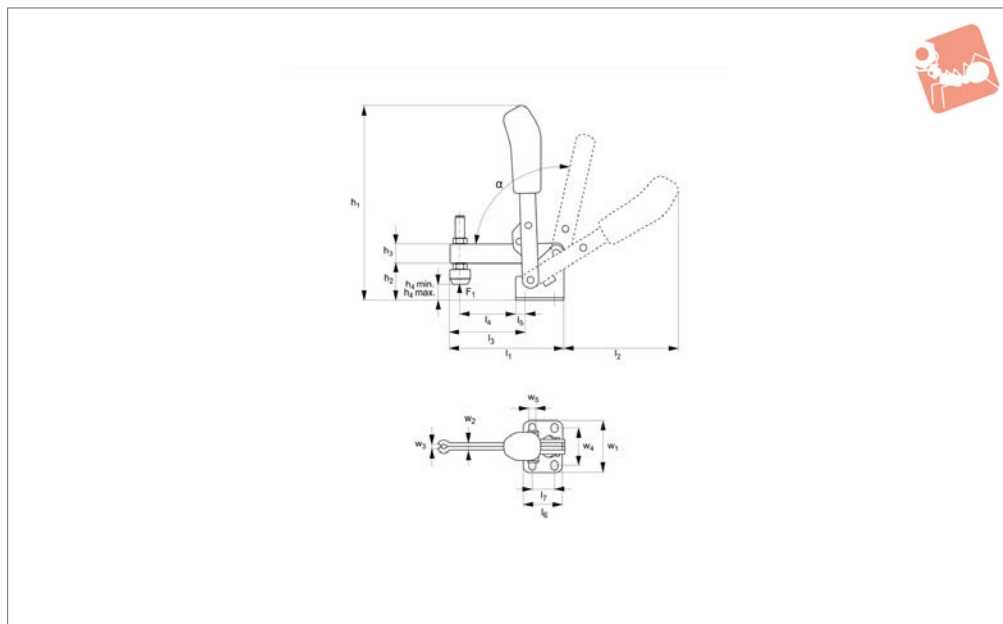

piece, the sleeve is then welded to the arm. Opening angle (symbol α /symbol α /symbol α /symbol*) can be changed by pressing in a stop pin on the clamp body. Temperature range -10°C to +80°C.

Hook type

Latch type

Explanation of forces

The force transmitted to the workpiece by the toggle clamp's closed arm, without itself being deformed when machine forces are applied. The holding force value is dependent upon the proximity of the measuring load point to the toggle clamp's pivot point (therefore two values, F_1 and F_2 are provided).

Holding Forces F_1 or F_2

The force applied to the workpiece when the toggle clamp's arm is closed. These clamping forces can only be stated for pneumatic toggle clamps, clamping forces of manual clamps cannot be easily measured as they are dependent upon the operator.

Clamping Forces F_3 or F_4

For pneumatically controlled toggle clamps only, F_5 is the piston force required (at 6 bar to) achieve the stated clamping force.

Piston Forces F_5

handle made of an
electrostatic conductive
(dissipative) material.

Horizontal Acting Toggle Clamps

open arm - horizontal base

41000.1

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes (sizes 2-6).
 Pre-lubricated bearings (grease suitable for food industry use).

Ergonomic, soft feel, oil-resistant handle with large grip area.
 Supplied complete with clamping screw (with rubber pad).

Technical Notes

Temperature range -10°C to +80°C.

Tips

For stainless steel version see part no. 41020.

41005.1

Material

Body: steel, zinc plated.

Rivets: stainless steel running in hardened bushes.

Pre-lubricated bearings (grease suitable for food industry use).

Supplied complete with clamping screw

(with rubber pad).

Technical Notes

Temperature range -10°C to +80°C.

Tips

Order removable handle separately 41005.

W0102- .W0104.

To prevent interference during use the handle can be removed after opening or closing the clamp.

41030

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes.
 Pre-lubricated bearings (grease suitable for food industry use).

Ergonomic, soft feel, oil-resistant handle with large grip area.
 Supplied complete with weldable clamping screw (with rubber pad).

Technical Notes

The arm can be shortened to suit the work-piece, the sleeve is then welded to the arm.
 Temperature range -10°C to +80°C.

41700.1

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in case hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Ergonomic, soft feel, oil-resistant handle with large grip area.

Technical Notes

Ideally suited for use as a toggle type

fastener for the lids or covers of fixed or rotating drums and containers.

The length of the hook is adjustable by rotating the threaded hook to extend or contract it's reach.

Temperature range -10°C to +80°C.

Tips

For counter strike see part no. 41700.W0011- .W0015.

For stainless steel version see part no. 41740.W0001- .W0005.

Order No.	Size	F ₁ kN	h ₁	d ₁	d ₂	h ₂	h ₃	l ₁	l ₂	Weight g

41740.1

Material

Body: steel, zinc plated.
Rivets: stainless steel running in case hardened bushes.

Technical Notes

For use with no. 41600 and 41700.W0001 - .W0005.

Tips

For stainless steel version see part no. 41740.W0311 - .W0315.

Hook Type Toggle Clamp

narrow base

Steel Toggle Clamps

41781.1

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Handle: oil-resistant plastic with large grip area.

Technical Notes

Suitable for use as a toggle type fastener

for the lids or covers of fixed or rotating drums and containers.

Their narrow base makes them ideal for applications where space is limited but holding forces must not be compromised.

The length of the hook is adjustable, up to 22mm. Adjustment is made by rotating the threaded hook to extend or contract its reach.

Temperature range -10°C to +80°C.

Tips

See part no. 41791.W0013 for strike catch.
 For stainless steel version see part no. 41781.W0303.

Push-Pull Toggle Clamps

compact version

Steel Toggle Clamps

41840.1

STEEL TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Ergonomic, soft feel, oil-resistant handle

with large grip area.
 Supplied complete with clamping screw (with rubber pad).

Technical Notes

Compact construction with long travel.

Temperature range -10°C to +80°C.

Tips

For stainless steel version see part no. 41840.W0002- .W0005.

41880.1

Material

Steel, zinc plated.

Technical Notes

The increased height of the centre line

allows a wide range of applications. Fastening by means of four screws.

For stainless steel version see part 41880.W0300- .W0305.

Reverse Action Push-Pull Toggle

angle base - heavy duty

42070

STEEL TOGGLE CLAMPS

Material

Base: cast iron, malleable, varnished.
 Lever and push rod: steel, zinc plated and tempered.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Ergonomic, soft feel, oil-resistant handle

with large grip area.
 Supplied complete with clamping screw and rubber nose.

Technical Notes

Reverse clamping position, clamp is locked when handle is extended at the back of the clamp (the reverse action of clamp no.

42050).
 This toggle clamp boasts a low height when in the clamped position, making it ideal for use in small spaces.
 Compatible with push-pull toggle clamps no. 42050.
 Temperature range -10°C to +80°C.

Order No.	Size	Clamping screw d_1	F_1 kN	d_2	d_3	h_1	h_2	h_3	h_4	Weight g

Stainless Steel Toggle Clamps

Hook Type Toggle Clamp

stainless steel - narrow base

41781.4

STAINLESS STEEL TOGGLE CLAMPS

Material

Body: stainless steel (AISI 304, 1.4301).
Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings.
Handle: oil-resistant plastic with large grip area.

Technical Notes

Suitable for use as a toggle type fastener

for the lids or covers of fixed or rotating drums and containers. The length of the hook is adjustable.
Their narrow base makes them ideal for applications where space is limited but holding forces must not be compromised.
The length of the hook is adjustable, up to 22mm. Adjustment made by rotating

the threaded hook to extend or contract its reach.

Temperature range -10°C to +80°C.

Tips

See part no. 41791.W0313 for fixed catch.

Safety Lever Toggle Clamps

Horizontal Toggle Clamps

safety lever - open arm - vertical base

41060.1

SAFETY LEVER TOGGLE CLAMPS

Material

Body: steel, zinc plated. Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use). Ergonomic soft feel oil-resistant handle

with large grip area.

Supplied complete with weldable clamping screw (with rubber pad).

Technical Notes

The safety lever holds the clamp in both

the open and the closed position. This prevents opening under vibration or inadvertent movement of the clamping arm when loading or unloading a fixture. Temperature range -10°C to +80°C.

Order No.	Size	F ₁ kN	F ₂ kN	Clamping screw	h ₁	h ₂	h ₃	h ₄	h ₅ min.	h ₅ max.	l ₁	l ₂	Weight g

Hook Clamp safety knob

Safety Lever Toggle Clamps

41600

SAFETY LEVER TOGGLE CLAMPS

Material

Body: steel, zinc plated.
Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
Handle: oil-resistant plastic handle with large grip area.

Technical Notes

The safety knob locks the clamp in the

closed position. This prevents opening under vibration or inadvertent movement of the clamping arm when loading or unloading a fixture.
Pull out the safety knob to release the clamp.
The h_2 engagement height (23mm) must be adhered to, ensure safety knob functionality.

The length of the hook is adjustable up to 12mm. Adjustment is made by rotating the threaded hook to extend or contract its reach.
Use counter strike 41740.W0013, order separately.
Temperature range -10°C to +80°C.

Order No.	Size	F_1 kN	h_1	h_2	h_3	l_1	l_2	l_3	Weight g

41620

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Handle: oil-resistant plastic with large grip area.

Technical Notes

The safety knob locks the clamp in the closed position. This prevents opening under vibration or inadvertent movement of the clamping arm when loading or unloading a fixture.
 Pull out the safety knob to release the

clamp.

Supplied complete with counter strike.
 For additional counter strikes, see part 41801.W00012- .W0014.
 Temperature range -10°C to +80°C.

Safety Lever Toggle Clamps

41805.1

SAFETY LEVER TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Handle: ergonomic soft feel, oil-resistant with a large grip area.

Hook: steel, tempered.

Technical Notes

The safety button locks the clamp in the closed position. This prevents opening under vibration or inadvertent movement of the clamping arm when loading or

unloading a fixture.
 Temperature range -10°C to +80°C.

Tips

Also available in stainless steel version part no. 41805.W0304.

41895

SAFETY LEVER TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).
 Handle: ergonomic soft feel, oil-resistant with a large grip area.

Technical Notes

The safety knob holds the clamp in both the open and the closed position. This prevents opening under vibration or inadvertent movement of the clamping arm when loading or unloading a fixture. Without angle bracket. Push and pull-

clamping (equal operation of rod and lever). Long rod-guide with attaching thread and nut.
 Temperature range -10°C to +80°C.

Order No.	Size	F ₁ kN	F ₂ kN	Clamping screw	d ₁	d ₂	h ₁	h ₂	l ₁	l ₂	l ₃ min./max.	l ₄	l ₅	l ₆	w ₁	w ₂	Weight g

Optical Measuring Toggle

40000.2

OPTICAL MEASURING TOGGLE CLAMPS

Material

Body: steel matt black.
 Bushes: case hardened and pre-lubricated.
 Handle: plastic, black, oil resistant, ergonomic.
 Supplied complete with matt black clamping screw (with rubber pad).

Technical Notes

For fastening to mounting plates, etc.

symbola/symbol* alternative angle through using the removable stop. Opening angle (symbola/symbol/symbola/symbol*) can be changed by pressing in a stop pin on the clamp body.

For optical analysis applications.

Tips

Designed specifically for clamping of parts during photometric measurement. Uniform

matt black surface prevents reflection, enabling easy „knocking-out“ of the clamp during optical analysis of a component.

42000.2

Material

Body: steel, matt black.
 Bushes: case hardened and pre-lubricated.
 Ergonomic soft feel, oil-resistant handle with large grip area.
 Supplied complete with clamping screw

45020.2 (with rubber pad).

Technical Notes

For optical analysis applications.

Tips
 Designed specifically for clamping of parts

during photometric measurement. Uniform matt black surface prevents reflection, enabling easy „knocking-out“ of the clamp during optical analysis of a component.

Push-Pull Type Toggle Clamps - Black

for optical measuring equipment

Optical Measuring Toggle

42050.2

OPTICAL MEASURING TOGGLE CLAMPS

Material

Body: malleable cast iron, matt black.
Lever and rods of tempered steel, matt black galvanised.

Technical Notes

For optical analysis applications.

Tips

Designed specifically for clamping of parts during photometric measurement. Uniform matt black surface prevents reflection, enabling easy „knocking-out“ of the clamp during optical analysis of a component.

Order No.	Size	F ₁ kN	Clamping screw	Weight g
42050.W0103	3	4	M 8x44	540

40000.3

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushings (sizes 2-3). Bearing positions are greased.
 With protective cap and handle made of electrostatic conductive (dissipative) material. The handle is ergonomic, soft

feel, oil-resistant and with large grip area.
 Safety clamping piece with finger protection, retainer for the clamping screw at the end of the clamping arm.
 Complete with zinc plated and tempered clamping screw no. 45060.W0300- .W0303.

Technical Notes

Temperature range -10°C to +80°C.
The ESD (electrostatically sensitive devices) vertical clamp is non-insulating. It must not be used in areas where open voltages are used.

ESD Clamping Screws for open arm toggle clamps

45060.3

ESD TOGGLE CLAMPS

Material

Steel, zinc plated and tempered steel.
Tensile strength class 8.8. With nut and removable rubber pad.

Technical Notes

The ESD (electrostatically sensitive devices) clamping screw is non-insulating. It must not be used in areas

where open voltages are used.

Order No.	Size	Type	Washer size	l_1	l_2	d_1	d_2	Screw DIN 933 $d_3 \times l_3$	Weight g

The ESD toggle clamps have been specially developed for working with electrostatically sensitive components, assemblies or devices in ESD protection zones (EPA) in accordance with the standard DIN EN 61340-5-1. All our toggle clamps have been tested and certified by an independent expert regarding leakage resistance, discharge time and surface tension.

Features

- Leakage resistance according to DIN IEC / TR 61340-5-2 between 10^{04} and 10^{09} Ohm.
- Discharge time according to DIN IEC / TR 61340-5-2 < 2 seconds.
- Surface tension (electric field strength) according to DIIN EN 61340-5-1 < 100 Volt.

Horizontal Acting Toggle Clamps

ESD - open arm - horizontal base

41000.3

ESD TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushings (sizes 2-3). Bearing positions are greased.
 With protective cap and handle made of electrostatic conductive (dissipative)

material. The handle is ergonomic, soft feel, oil-resistant and with large grip area. Retainer for the clamping screw at the end of the clamping arm.
 Complete with zinc plated and tempered clamping screw no. 45060.W0300- .W0303.

Technical Notes

Temperature range -10°C to +80°C.
The ESD (electrostatically sensitive devices) horizontal clamp is non-insulating. It must not be used in areas where open voltages are used.

Auto-Adjust Toggle Clamp

open clamping arm - vertical base

Auto-Adjust Toggle Clamps

42609

AUTO-ADJUST TOGGLE CLAMPS

Material

Body: steel, zinc plated.
Ergonomic, soft feel and oil-resistant handle with large grip area.

Supplied complete with zinc plated clamping screw (with rubber pad).

Technical Notes

Automatically adjusts to suit work-piece height.
Temperature range -10°C to +80°C.

Order No.	Size	F ₁ kN	Automatic height compensation s ₁	Height compensation max.	Clamping screw	h ₁	h ₂	h ₃	h ₄	h ₅	h ₆ min.	Weight g

Benefits

- Automatically adapts to workpiece height / width.
- Ideal for small batch sizes.
- Adjustable clamping forces.

Example Toggle Clamps

42605 - Horizontal base - vertical acting

42611 - Push pull type - horizontal acting

Combination Toggle Clamp

position and clamp

Auto-Adjust Toggle Clamps

42500

AUTO-ADJUST TOGGLE CLAMPS

Material

Body: steel, zinc plated.
 Rivets: stainless steel running in hardened bushes. Pre-lubricated bearings (grease suitable for food industry use).

Ergonomic, soft feel and oil-resistant handle with large grip area.

Technical Notes

Especially useful in welding applications.

The positioning rod and toggle clamp achieve precise positioning and clamping of components in one operation.
 Temperature range -10°C to +80°C.

Order No.	Size	F ₁ kN	F ₂ kN	d ₁	h ₁	h ₂	h ₃	h ₄ min.	h ₄ max.	h ₅	h ₆	l ₁	Weight g

47060

Material

Body: steel, zinc plated.
 Bushes: case hardened and greased.
 Rivets: stainless steel.
 Complete with tempered, white zinc plated clamping screw.

Technical Notes

Bearings are pre-lubricated.
 Clamp ready for installation and consists

of:
 - vertical toggle clamp no. 40000 (without handle)
 Pneumatic cylinder, double acting.
 F_3 and F_4 = max. clamping force at 6 bar.
 V_n = air consumption per double stroke in dm^3 at 6 bar.
 Suitable proximity switches for end-position monitoring are available using

order 45001. 0.3m PUR cable with M8 connector and rotatable knurled nuts.
 Switching function: NOC.
 Output: PNP.

Tips

The console is self-supporting and must be clear of other surfaces. There is a valve for controlling the speed of operation.

Pneumatic Toggle Clamps

47010

PNEUMATIC TOGGLE CLAMPS

Material

Body: steel, zinc plated and galvanised.
Bushes: case hardened and greased.
Rivets: stainless steel.
Complete with tempered, galvanized clamping screw.

Technical Notes

Bearings are pre-lubricated.
Clamp ready for installation and consists of:

- vertical toggle clamp no. 40000 (without handle)
- FESTO-pneumatic cylinder, double acting.

F_3 and F_4 = max. clamping force at 6 bar.
piston \varnothing^* = required piston dia. to achieve force F_5 at 6 bar.

V_n = air consumption per double stroke in dm^3 at 6 bar.

Suitable proximity switches for end-

position monitoring are available using order 45001. 0.3m PUR cable with M8 connector and rotatable knurled nuts.
Switching function: NOC.
Output: PNP.

Tips

The console is self-supporting and must be clear of other surfaces. There is a valve for controlling the speed of operation.

PNEUMATIC TOGGLE CLAMPS

47030

Material

Body: steel, zinc plated and galvanised.
 Bushes: case hardened and greased.
 Rivets: stainless steel.
 Complete with tempered, galvanized clamping screw.

Technical Notes

Bearings are pre-lubricated.
 Clamp ready for installation and consists

of:

- vertical toggle clamp no. 40000 (without handle)
 - FESTO-pneumatic cylinder, double acting.
- With magnetic piston for limit position query.
 F_3 and F_4 = max. clamping force at 6 bar.
 V_n = air consumption per double stroke in dm^3 at 6 bar.

Suitable proximity switches for end-position monitoring are available using order 45001. 0.3m PUR cable with M8 connector and rotatable knurled nuts.
 Switching function: NOC. Output: PNP.

Tips

The console is self-supporting and must be clear of other surfaces. There is a valve for controlling the speed of operation.

Heavy Duty Vertical Pneumatic Toggle with vertical cylinder mounting

Pneumatic Toggle Clamps

47800

PNEUMATIC TOGGLE CLAMPS

Material

Body: tempered steel, burnished.
Axle bolts: tempered and ground, locked with circlips.
Bushes: case hardened and greased.

Technical Notes

Clamp ready for installation, fitted with FESTO-pneumatic cylinder, double acting.

f_3 and f_4 = max. clamping force at 6 bar.
Piston dia. = required piston dia. to

achieve force f_5 at 6 bar.

Vn = air consumption per double stroke in dm^3 at 6 bar.

Tips

Ideal for installation in material handling lines and special purpose machines.
Opening and closing of clamp can be controlled electronically, allowing integration into automated processes.
See also no. 46200 <\46200#25> - clamp only.

Clamps are maintenance free, due to heat-treated and ground axle bolts. Holes are provided in arm to allow fixing of clamping elements via welding or screws.

Important Notes

Magnetic piston for end-position sensing.

Please order proximity switch separately from FESTO, see table for details.

Heavy Pneumatic Toggle Clamp

dual acting

Pneumatic Toggle Clamps

47910.1

PNEUMATIC TOGGLE CLAMPS

Material

Case: aluminium. Max. operating pressure 6 bar. With continuously adjustable opening angle in the range 10° to 135°. With pneumatic end position cushioning and self-locking. With inductive query 24V as standard. **Clamp arm not included.**

Technical Notes

Accessories (not included in the standard

scope of delivery) are clamping arm no. 47912.W0210 - .W0218 centre, right and left, and connecting plug for inductive query.
Piston diameter: 40mm.
Clamping moment at 5 bar 120Nm.
Holding moment max. 380Nm.

Tips

These pneumatic toggle clamps are

suitable for use in material handling lines and on special machines. Opening and clamping position of the clamp can be controlled electrically, allowing integration into automated manufacturing processes.

Heavy Pneumatic Toggle Clamp

dual acting

Pneumatic Toggle Clamps

47912.1

PNEUMATIC TOGGLE CLAMPS

Material

Case: aluminium. Max. operating pressure 6 bar. With continuously adjustable opening angle in the range 5° to 135°. With pneumatic end position cushioning and self-locking. With inductive query 24V as standard. **Clamp arm not included.**

Technical Notes

Accessories (not included in the standard

scope of delivery) are clamping arm no. 47912.W0210 - .W0218 centre, right and left, and connecting plug for inductive query.

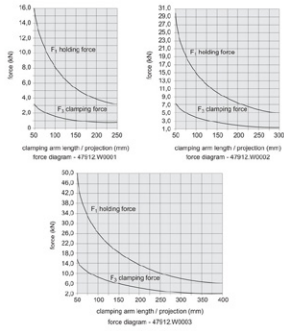

Tips

These pneumatic toggle clamps are suitable for use in material handling lines and on special machines. Opening and clamping position of the clamp can be

controlled electrically, allowing integration into automated manufacturing processes.

Heavy Duty Toggle Clamps

Heavy Duty Vertical Toggle Clamp horizontal base

HEAVY DUTY TOGGLE CLAMPS

46080

Material

Body: steel, black oxide coated.
 Lever: cast steel, black oxide coated.
 Bushes: reamed, case hardened.
 Pins: hardened, ground and permanently lubricated.
 Handle: ergonomic soft feel, oil-resistant, with large grip area.
 Supplied complete with zinc plated and

tempered clamping screw (with rubber pad).

Technical Notes

Heavy vertical toggle clamps are especially suitable for production equipment and fixtures.
 Temperature range -10°C to +80°C.

Tips

Clamp nuts on lever arm to vary friction in movement.
 Supplement these base modular toggle clamps with your own clamping arms, handles etc. to meet the requirements of your specific application.

Heavy Duty Vertical Toggle Clamp

with vertical base and mounting holes

Heavy Duty Toggle Clamps

46100

HEAVY DUTY TOGGLE CLAMPS

Material

Body: tempered steel, burnished.
Axle Bolts: tempered and ground, locked with circlips.

Bushes: case hardened and greased.

Technical Notes

The clamping forces F_3 and F_4 can be

achieved by using a cylinder with piston force F_5 . This clamp can be equipped with a normal hydraulic or pneumatic cylinder. The rod joint is exchangeable.

Heavy Duty Hook Toggle Clamp

for high retaining force

Heavy Duty Toggle Clamps

46030

HEAVY DUTY TOGGLE CLAMPS

Material

Foot, lever, arm and catch: cast steel, black oxide coated.

Strap, pins and nuts: steel, heat treated and zinc plated.

Pins: hardened, ground and permanently lubricated.

Handle: ergonomic soft feel, oil-resistant, with large grip area.

Supplied complete with counter catch.

Technical Notes

Four mounting holes in both foot and

catch.

Circlips are used to retain pins in bearing bushes, and to centre the clamping pin. Temperature range -10°C to +80°C.

Heavy Duty Push-Pull Toggle Clamps

reversible lever

Heavy Duty Toggle Clamps

42100

HEAVY DUTY TOGGLE CLAMPS

Material

Body: cast iron, malleable, burnished.
 Lever and rod: tempered steel, burnished.
 Lever: steel, zinc plated.
 Handle: ergonomic soft feel, oil-resistant,

with large grip area.

Supplied complete with zinc plated clamping screw.

Technical Notes

For push-pull clamping.
 Very strong construction with long push-rod guidance.
 Temperature range -10°C to +80°C.

Position Sensor for manual toggle clamps

Toggle Clamp Accessories

41035.1

TOGGLE CLAMP ACCESSORIES

Material

Sensor and mounting bracket: steel, zinc plated complete with inductive sensor M 8x1.

Cable: angled connector with cable permanently injection moulded on. Silicone-free, halogen-free, gold plated contacts. IP68 rated in accordance to IEC529.

Technical Notes

Monitors the closed position of a toggle

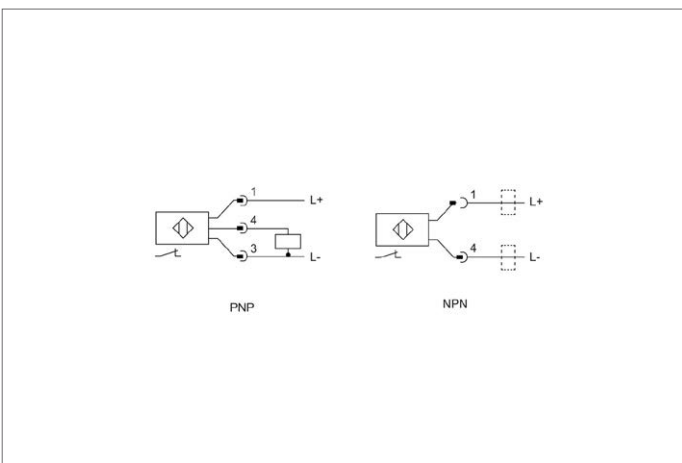

clamp and enables their integration into fixture/application monitoring systems. Sensor monitor can be used on both sides for horizontal toggle clamp nos. 41000.W0003, 41030.W0003 and 41000.W0103, and only on one side for horizontal toggle clamp with safety latch no. 41000.W0003. Temperature range: 0°C to 60°C. Sensing bracket 41035.W0103 can be integrated into your monitoring system using cables 41035.W0001 or W0002 and can be

rewired either PNP or NPN (see circuit diagram below).

Tips

Order toggle clamp separately.

Order No.	Type	Cable length m	w ₁	h ₁	l ₁	Weight g

Supporting Arms for toggle clamps

Toggle Clamp Accessories

45000

TOGGLE CLAMP ACCESSORIES

Material

Steel, zinc plated. Complete with two clamping screws no. 45060 and hexagon screw.

Technical Notes

With this supporting arm there is the option of clamping either two small workpieces or one large workpiece at two

points. See table below for suitable toggle clamps.

Temperature range -10°C to +80°C.

Order No.	Size	Clamping screw d_1	Distance between screws l_1 min. max.	l_2	Weight g

19710

Technical Notes

Use as a quick fixture palletising system - blank pallets available, see part no. 19710.W0325.
Mount to grid plate or T-slot table with clamps provided.
Operates from 70-100 psi shop air, no need

for vacuum pumps and coolant traps.
Will accept the standard 19730.W0150 vacuum pallet, increasing your vacuum platform to over 360mm x 315mm.
Remove 12mm pins for grinding/machining thin material, use set screws to locate and aid in holding force.

Tips

Clamp in a vice to reduce setup time.

Important Notes

Set includes everything necessary to get your 19710 running within minutes of opening the box - excludes regulator.

Order No.	Description	l_1	h_1	w_1
19710.W0110	Gasket - Black per foot	-	-	-
19710.W0114	Gasket - White per foot	-	-	-
19710.W0300	Complete System - Base, 2 Pallets and Clamps	-	-	-
19710.W0325	Blank Pallet	318	25	150
19710.W0375	Base and Clamps	315	25	140

Applications

More than just a vacuum system - a fully flexible clamping and fixturing solution.

Mount the base unit to the grid plate, T-slot table or in a vice.

Make your own vacuum fixtures for fully flexible fixturing.

Will accept the standard 19730.W0150 pallet, increasing your vacuum platform to over 360 x 315mm.

Sliding stop 12042 used to assist in low profile positioning on our vacuum system.

Maintenance

Very little maintenance is necessary to keep your system up and running. Using general housekeeping practices will ensure your system operates properly for years to come.

- Brass filters may require periodic cleaning to prevent clogging and airflow obstruction. Remove the filters, soak in a cleaning solvent, and apply compressed air from the rear of the filter. This should be done in a safe manner to avoid personal injury to yourself or others. Then, simply dry and re-install the filters.
- The Venturi generator may become obstructed with foreign objects or blocked up by coolant if the system has not been used for a while. Simply remove the supply valve and check/remove any small objects that may be interfering with the air supply. While the supply valve is removed, use a 0,9mm pin to clear any debris build-up that may have accumulated in the Venturi generator (see image below).
- The low vacuum indicator may also require periodic cleaning. Remove this and clean with light oil before re-installing.
- A visual inspection of all O-rings and white gasket material should be done on a regular basis: O-rings monthly, white gasket material weekly.

Supply valve removed exposing Venturi generator

Troubleshooting

This is a very simple operating system. Any problems can be easily rectified with the information contained in this manual or by contacting us directly.

- Check air pressure.
- Ensure gasket material is protruding above the fixture plate and continuous with no gaps.
- Clean brass filters.
- Check front of Venturi generator for obstructions.
- Ensure locating pins are fully seated (diamond and solid).
- Through hole for vacuum pallets should be a minimum of 0.25 inch diameter.
- Check that all top plate mounting bolts are tight and below the surface of the plate.
- Check air lines for leaks.
- Check workpiece for flatness.
- Check exhaust air for restricted flow.

Vacmagic VM300 Vacuum System for vacuum and quick fixture change

Vacuum Clamping Systems

19730

VACUUM CLAMPING SYSTEMS

Technical Notes

Can be used as a traditional vacuum system and for a rapid fixture change system. For vacuum application use the standard vacuum grid pallet or use with the blank pallets machined to suit custom parts. Alternatively, use as a quick fixture change system. Pallets can be swapped in 30 seconds or

less. Load pallets while machining to maximise productivity. Easy to install and set up. Virtually maintenance free - reliable and easy to use. Flexible pallet design. No pumps - use standard shop air. Air supply requirements 70-100 psi. Low pressure safety switch, vacuum indicator, hardened locator pins all included.

Tips

Vacuum pallet 19730.W0150 is machined with cross slots to receive vacuum sealing gasket and machined with M 6 holes for fixing of stops such as sliding stop 12042.W0200. Spare parts readily available, please see replacement parts page.

Order No.	Description	l_1	h_1	w_1	Weight kg
19730.W0101	Complete System Includes: Base Unit, 2 Blank Pallets, 1 Vacuum Pallet	-	-	-	25.5
19730.W0130	Blank Pallet	360	19	315	
19730.W0131	Blank Pallet (1" thick)	379	25	379	5.0
19730.W0150	Vacuum Pallet with M 6 Threaded Holes	360	16	315	14.5
19730.W0160	Large Vacuum Pallet	859	16	368	12.0
19730.W0175	Base (Receiver) - Includes Safety Switch, Required Hoses	323	35	330	25.8

Applications

- Quick change
- Maximise productivity
- Easy installation
- Precise repeatability
- Reliable and easy to use
- No pump required

- 1 Low profile base unit quickly mounts to machine table. Operates with standard 70 psi workshop air.
- 2 Workpiece placed over rubber gasket and pushed down to create a vacuum. Now ready for machining.
- 3 Two systems placed next to each other for holding larger pieces.

- 13** 6mm supply line regulator fitting (MB45050)
- 14** Inline filter (MB45015)

ov-vacmagic-vm300-w19730-A-T-contents-of-kit-rmh - Updated - 25-10-2022

Quick and Easy to Use with Every Load

Option 1 - Preferred Method for Mounting the Base Unit

- 1) Identify the locating pins and secure with 4 mounting clamps.
- 2) Baseplate is now ready for connection of air supply.

Option 2 - Mounting Using Internal Slots

- 1) Remove 6mm bolts (2 each), securing locating pins from the bottom side of the unit, and loosen top plate mounting bolts. Remove locating pins, mounting bolts and top plate.
- 2) Identify the base plate and secure using special mounting washers.
- 3) Prior to installing top plate, ensure there are no foreign objects on either of the mating surfaces and all three O-rings are properly seated. Install top plate and loosely install mounting screws.
- 4) Insert locating pins and adjust diamond pin 90° to solid pin. Please be aware there is no practical method of installing the 6mm bolts used to secure the locating pins once the base is mounted. (A sub-plate with clearance holes may be used if necessary.)
- 5) Securely tighten all top plate mounting bolts.

Important Note: One loose top plate bolt may interfere with pallets precisely locating on rest pads, preventing 100% vacuum.

Option 2 may be necessary if mounting more than one unit side-by-side.

Base alignment pins may be installed to locate off T-slots or precise bores in sub-plate. Remove top plate and secure with provided mounting screws.

- 6) Base plate is now ready for connection of the air supply.

VacMagic VM100 - 19710

connection of air supply

Clamping & Height Setting

The in-line filter is provided to help prevent blockages in the air supply.

In-line filter

Regulator fitting

- 1) Install regulator fitting to regulator. Connect 6mm blue tubing to front of base unit (supply valve) and regulator fitting. Mounting brackets are included to aid in routing lines.
- 2) Secure tubing close to the base unit to prevent undue stress on supply valve.
- 3) Place blank pallet on unit, turn on supply valve. Vacuum indicator retracts. (Refer to troubleshooting section if indicator is not fully recessed).

System is ready for use.

Manual Machines

Note: Air requirements should be between 70-100 psi with a minimum flow of 2 cfm. Pressure below 70 or above 100 psi will reduce maximum vacuum force.

Perform steps 1-3 above for manual machines

- 4) Remove power from the machine.
- 5) Mount the low pressure trip switch (LPTS) at convenient location, usually to the rear of the machine.
- 6) Connect 4mm blue tubing to the front base unit and fitting on the LPTS.
- 7) Connect the LPTS in series with the selected cut-off circuit.
- 8) Restore power and check all the air connections for leaks.
- 9) Adjust the trip screw located on top of the LPTS between the two prongs; synchronise with the low vacuum indicator on the front of the base unit.

Low Pressure Trip Switch (LPTS) Important Note:

Method of synchronising the LPTS with the low vacuum indicator: With LPTS connected to the door switch interlock, slowly reduce the airflow with the supply valve until the low vacuum indicator starts to protrude. At this point, adjust the trip screw until the machine shuts down. Increase the airflow and the machine will resume function. This should be done several times to ensure the settings are optimised.

System is ready for use.

Review Checklist Prior to Use

- Base unit is identified and securely mounted to the machine table.
- Top plate bolts are tight.
- Check all air lines for leaks.
- Air supply is 70-100 psi.
- Low vacuum indicator is operating properly.
- LPTS is operating properly (if installed).

Custom Vacuum Pallets

When using the blank pallet to design your custom pallets, we recommend a quick look at some examples sent in by customers. Feel free to submit photos of your application - we love to see what our customers can do with our products.

Machining dimension for the white gasket material: 0.142" wide x 0.138" deep, bottom of slot to be square.

One through hole is required for each vacuum chamber, minimum diameter 0,25 inch. We suggest an aggressive countersink on the bottom side of the pallet and the top should be in a slot, channel or pocket. Avoid through hole being directly over rest pads on base unit (see image on right).

Twin vacuum setup

Create custom vacuum pallets for specific applications

Additional Information

- The Venturi generator produces a vacuum of approximately 12-13 psi.
- Increasing friction between your workpiece and the vacuum pallet will provide additional resistance against lateral movement. Using an adhesive-backed "sandpaper" product on the vacuum plate or pins with sharp points protruding slightly above the surface will aid in difficult applications.
- When using more than one system for large applications, we recommend that you do not connect them to each other. Rather, keep each separate system running independently.
- Apply a small amount of silicone to secure the white gasket material in the slot. A very small gap is all that is required, so as not to interfere with compression characteristics.
- When using the VacMagic as a pallet changer or when a vice is mounted to a blank pallet, aggressive machining operations can be performed. In this configuration the vacuum being produced is approximately 1,500 lbs. What makes the unit so strong is the two 12 mm locating pins that would have to bend or snap to break the vacuum seal.
- The standard vacuum pallet has 140 holes (4mm) that can be used for locating pins or small edge clamps.

Mounting a vice on the blank pallet will eliminate the time it previously took to clock it in.

Fixture plate.

	Length	12.40"	315mm

Introduction to Vac Pallet Systems

It is over 10 years since the VacMagic palletising system was a workholding solution award winner at the MACH exhibition, and its relevance in prototype and early production run manufacturing is still as strong today as its innovation was 10 years ago.

Vacuum palletisation will reduce your setup times and maximise your production runs!

VacMagic Systems - Two Products in One

VM300 - Simple and easy to use, has the ability to switch from pallet changer to vacuum chuck in seconds to reduce setup time.

VM100 - Primarily designed for grinding non-ferrous material on a magnetic chuck, like its bigger brother (the VM300) it can be a pallet changer and a vacuum chuck.

Multi-Power Vac System

Multi-Power Vac - Possibly the most multi-functional vacuum workholding system currently available.

Why Choose a Vacuum System?

Compatible with CNC machines; vacuum clamping is cost-effective, increases productivity and minimises the potential of any clamping damage to the workpiece.

The VacMagic system enables high volume production runs at the same feeds and speeds as traditional pallet systems, with less setup time which reduces spindle downtime.

The low profile base unit of the VacMagic can be used either as a vacuum pallet or a standard pallet set up as a fixture plate for increased productivity. Alternatively, a standard vice can be mounted directly onto the VacMagic base for easy loading and unloading, eliminating the need to index the vice on each use – providing quick change over from prototype to production volumes.

Multi-Power Vac has a 400mm x 350mm grid plate base, tapped with M6 threads and a finely textured surface, which increases holding force through friction. The Multi-Power Vac therefore offers greater flexibility for multiple workholding solutions.

What Materials Can My Vacuum System Work With?

The vacuum system is ideally suited to anything that is difficult to hold, such as oddly-shaped objects, parts too thin for traditional workholding, or brittle and/or soft materials like graphite. It is an ideal alternative to a magnetic chuck for non-magnetic materials such as wood or plastic.

What Can We Do For You?

For a demonstration of our VacMagic and Multi-Power Vac Palletising and Clamping System.

Please call us on **0333 207 4497** or email sales@wixroyd.com

We look forward to helping you maximise your productivity.

19740

VACUUM CLAMPING SYSTEMS

Technical Notes

Easy to install and set up vacuum workholding system.

We recommend use of a coolant trap (optional) when using an external vacuum source.

Tips

1. Receiver base 19740.W0200 is 406 x 355mm, with grid plate design to allow multiple workholding solutions. Textured surface generates additional holding force through friction.
2. Machined with cross slots to form grids

- of 23,6mm square, at 26,9mm spacing. Each grid machined with M6 x 0,8 holes for fixing of stops such as sliding stop 12042. W0200.
3. Cross slots (3,6mm wide x 3,5mm deep) accept sealing gasket around each grid. Flexible receiver base design with 4 vacuum ports allowing holding of 1 to 4 small parts, or 1 large part (vacuum ports can be plugged).
4. Six oversized steel washers machined below bottom surface of receiver means it can be used for grinding operation on a

- magnetic chuck.
5. Twelve recessed pockets on side of receiver base allow multiple bases to be linked together to make a single large vacuum table.
6. 12mm diameter locating pins on underside of receiver base at 270mm, centre line for easy location.
7. Can be powered with shop air (70-100 psi), or vacuum generator.
9. Eight location ports for vacuum source connection.

Order No.	Description	l ₁	h ₁	w ₁	Weight kg
19740.W0000	Complete System Includes: Multi Vac Pallet, Vac Generator, Coolant Trap and Fittings.	406	31.7	355	15.0
19740.W0050	Coolant Trap with Hose and Fittings	-	-	-	1.5
19740.W0100	Vacuum Generator with Regulator, Filter and Push Fit Connections	-	-	-	1.0
19740.W0200	Multi Vac Plate Only. With Mounting Fittings and Tubing.	406	31.7	355	16.5
19740.W0250	Sacrificial Top Plate with Mounting Screws (406 x 355mm).	-	-	-	4.0

Application 1

- 1 A custom "sacrificial plate" was made to cover the multi-power vacuum clamping plate for machining of thin and delicate parts.
- 2 Sacrificial plate is easily secured to multi-power vacuum clamping plate via four flat head screws.
- 3 To maximise the flexibility of the machining process, four multi-power vacuum clamping plates have been connected together and are run from one standalone vacuum pump. Here three very different components are being held; one long workpiece even stretches across two vacuum units.

Application 2

- 4 Multi-power vacuum clamping plates are suitable for large and small components. In this application six units have been connected together to achieve a very large clamping area of approximately 1200 x 700mm.
- 5 To hold delicate components, a custom pallet has been designed; vacuum ports were accessed through the pallet with a grid pattern to suit the component. Grid is sealed using supplied vacuum gasket to create vacuum seal.
- 6 Workpieces are aligned to the vacuum seal and loaded. Air supply is applied and workpieces are clamped ready for machining.

Why use the Multi-Power Vacuum plate?

- Cost-effective, versatile clamping that can be used for many applications.
- Quick setup and very easy to use.
- Minimises the likelihood of damage to the workpiece caused by other workholding methods.
- Compatible with CNC machines.
- Four suction ports allow multi-part clamping or a large surface area.
- Pre-drilled & threaded M6 holes for extra clamps or stops.

For a unique, universal clamping solution, look no further than Wixroyd's 19740 Multi-Power vacuum clamping plate. Equipped with several innovative features to meet your vacuum workholding needs.

Installation Overview

- Can be powered with our vacuum generator (19740.W0100) or can be run from machine shop air supply (70 psi).
- Base dimensions are 406mm x 355mm.
- 4 Vacuum ports allow up to four small parts or one large part to be held securely (ports can be plugged).
- M6 tapped threads integrated in the grid plate for versatile workholding solutions and / or more aggressive machining conditions.
- Multiple pallets can operate from a single vacuum generator.

Simply mount the pallet using two mounting clamps. The pallet is now ready for the air supply to be connected.

- Place pallet on magnetic chuck.
- Use locating pins & liners to precisely locate pallet onto sub-plate and secure with mounting clamps.
- For larger workholding solutions, link pallets connecting using the supplied washers.

The in-line filter is provided to remove contaminants from the air supply. Adjust the gas regulator (80-95 psi best). Common air connection fittings are provided.

- Base unit is mounted to machine table.
- Air supply pressure is 70-100 psi.
- Air lines are connected and sealed.
- Low vacuum indicator is operating properly.

Very little maintenance is necessary to keep your system up and running. Using general housekeeping practices will ensure your system operates properly for years to come.

Troubleshooting

This is a very simple operating system. Any problems can be easily rectified with the information contained in this manual or by contacting us directly.

- Check air pressure.
- Ensure gasket material is protruding above fixture plate and that there are no gaps between the gasket and the plate.
- Clean brass filters.
- Check Venturi generator inlet for obstructions.
- Ensure that the through hole for the vacuum pallet is a minimum of 1/4 inch in diameter and is chamfered.
- Check air lines for leak.
- Check workpiece for flatness.
- Ensure the exhaust air line is not blocked.

Optional Mounting Methods

Connection of Air Supply

Review Checklist Prior to Use

Maintenance

12490

Material

Body: steel, blackened.
Clamping jaw: brass.

Technical Notes

Used to raise workpiece 80mm above

machine table to improve clearance of milling/drilling head. Can accommodate component thickness from 8 to 40mm. Clamps quickly actuated via bolt (27 A/F).

Tips

Ideally suited to flat work pieces of regular thickness.

Variable Hexagon Clamps

low height

Multi-Clamping Systems

12040

MULTI-CLAMPING SYSTEMS

Material

Body: steel, hardened and blackened.
Screw: steel, eccentric, heat treated (10,9) and blackened.

Technical Notes

Hexagon clamps actuated by means of an

eccentric screw (provided). Available with either smooth or ribbed faces.

Tips

Max. clamping section is 25mm. Each of the clamp's faces increases the distance from the centre line by 1mm, thus work-

pieces of varying sizes can be held using just one clamp and is actuated by a simple rotation of the clamp face.

Reorder screw 12112.W0512.

Mitee-Grip Tape

for holding small and thin components

Multi-Clamping Systems

- Place the grip tape sheet on a subplate leaving a 6mm border on all sides.
- We recommend the part being lightly clamped to prevent movement.
NOTE: For very thin workpieces use a top plate for even pressure.
- The ideal application temperature is 100°C, when the adhesive is fully liquid. 80°C is the melting temperature of the adhesive and is therefore the minimum temperature for application. Some customers use an oven and record time and temperature to determine best application. A hot plate may also be used at higher temps if monitored carefully. Most parts will 'float' when the grip tape has liquefied.
- Use air or water to cool adhesives, being careful to prevent water from going between subplate and workpiece whilst hot.
- Cooled part is ready for machining. We recommend the use of a coolant to keep the part cool. To release the component, re-heat the adhesive. The component will require cleaning to remove wax residue - we have found an ultrasonic cleaner or warm alcohol-based wipe is effective.

10784

MULTI-CLAMPING SYSTEMS

Material

A heat activated, wax-based compound embedded in precision paper. Coated on a nylon mesh or in a stick form.

Technical Notes

Maintains parallelism on precision parts. Very useful for thin parts, micro-machining, optical and quartz components as well as jewellery related items.

Tips

Approx. clamping force is 40 PSI.

Important Notes

- Place the Mitee-Grip sheet on the subplate leaving a 6mm border on all sides. Melt the wax stick onto the wax subplate.
- In some cases the part should be lightly clamped to prevent movement. Over thin workpieces, use a top plate for even pressure.
- Heat parts to between +85°C and +90°C. Heating from the bottom is best.
- Use air or water to cool, being careful to

prevent water going between subplate and workpiece whilst hot.

5. The part is now ready to machine. Use a coolant to keep it cool. To remove the part, re-heat to between +80°C and +90°C.

Order No.	Description	Size

10784.W0250	Mesh Roll	254x1524
10784.W0252	Mesh Roll	254x7620

19762

VICE CLAMPING

Material

Body: 80000 PSI ductile cast iron.
Sideways flame hardened to 40 HRc max.

Technical Notes

Vice jaws not included, order separately.
See part no. 19790.
Jaw capacity dependent upon selection of either machinable or hard jaws. See technical pages.

Replacement parts available.

Tips

Supplied with actuation handle, hex key and wrench.
Base plate designed to adapt to wide range of machine tables.
8-station vice columns can be located on a

pallet using edge location with shims or spacers (not supplied).

Important Notes

Not compatible with 19768 compact 8-vice column.
All dimensions are in inches unless stated *.

8 Station Vice - ReLock 8 with machinable soft jaws

Vice Clamping

19764

VICE CLAMPING

Material

Body: 80000 PSI ductile cast iron.
Sideways flame hardened to 40 HRC max.
Machinable jaws: aluminium.

Technical Notes

Replacement parts available.

Tips

Supplied with actuation handle, hex key and wrench.
Base plate designed to adapt to wide range of machine tables.
8-station vice columns can be located on a

pallet using edge location with shims or spacers (not supplied).

Important Notes

All dimensions are in inches unless stated *.

Order No.	Vice size	Set contents	Clamp pressure lb max.	Base type	Jaw capacity	h ₁	h ₂	h ₃	w ₁	w ₂ ±0.001	w ₃	Weight lb

VICE CLAMPING

Material

Body: 80000 PSI ductile cast iron.
 Sideways flame hardened to 40 HRC max.
 Machinable jaws: aluminium.
 Carrier jaws: aluminium.
 Hard jaws: steel.

Technical Notes

Jaw capacity dependent upon selection of

either machinable or hard jaws, see technical pages.
 Designed for machining centres with small working envelopes. Through mounting holes are included to mount directly to a pallet without the need for a base plate.

Tips

Supplied with actuation handle, hex key

and wrench and mounting kit.
 Adaptor plate 19770 can be used to attach this compact vice column to a pallet or indexer.

Important Notes

All dimensions are in inches.

Order No.	Vice size	Set contents	Clamp pressure lb max.	Jaw capacity	Recommended foot lb	h_1	w_1 ± 0.001	w_2

All dimensions in inches

Maximum workpiece capacities for selected vice configuration. All dimensions in inches.

- Workpiece
- Vice jaws

The ReLock Vice System combines high manufactured tolerances with unequalled versatility in providing two-station and 8-station production vices.

ReLock CNC Vices, available with machinable soft jaws, hard jaws, master jaws and parallels, or fixture plates, allow the machinist a variety of configurations with the same vice. Bodies are manufactured from 80,000 psi ductile cast iron, and guide parts are flame hardened and ground to accuracies of $\pm 0,0005''$.

Manual and hydraulic two-station and 8-station vices are available in widths of 4", 6" and 8".

- Reduced setup times - when used with out SnapLock system, jaws can be changed or indexed in a matter of seconds.
- Extremely versatile: comprehensive array of jaws and accessories for vertical or horizontal machining.
- Accurate and durable: designed and precision manufactured from high grade materials.

Advantages

19764 8-Station Vice with soft jaws.

19752 Double Station Vice.

19754 Double Station Vice with soft jaws.

19756 Double Station Vice with hard jaws.

Features and Benefits

Optimised Table Space

Compact modular design allows a multitude of mounting configurations. Vices can be mounted close together without hindering the removal or attachment of jaws. The ReLock 8-station (shown) is ideal for horizontal machining centres, as well as for use with rotary indexers on vertical machining centres.

Locating and Mounting

Locating and mounting options are simple and accurate. The bottom surface of the system has four precision dowel pin holes for locating and four drilled and counterbored holes drilled through from the top surface for rugged mounting. Side clamp slots are also incorporated.

ReLock Chip Shields

ReLock's unique three piece telescopic chip shield wraps completely around the SnapLock knuckles, keeping swarf from getting into the vice's clamping mechanism. Shields can be quickly and easily removed for maintenance purposes.

Single Station Conversion

Used in conjunction with SnapLock carrier jaws, the conversion plate allows the ReLock system to be converted from a double to a single station vice – ideal for larger workpieces.

Centre Jaw Location

The ReLock's centre jaw locating studs allow quick jaw mounting and indexing to accuracies of ± 0.0005 ". Foolproof pin eliminates the possibility of the jaws being accidentally mounted in reverse.

SnapLock Knuckle

Exclusive SnapLock knuckle allows SnapLock soft jaws and SoftLock carrier to be attached and removed in seconds.

Auto Offset Mechanism

Exclusive automatic offset mechanism allows non-simultaneous workpiece clamping and unclamping to one of the three optional offset settings: 4" and 6": 0.030", 0.125", or 0.250"; 8": 0.125", 0.250", or 0.375". The offset setting is the distance the rear jaw backs away from the workpiece before the front jaw begins to back away from the workpiece.

ov-W19752-A-T-W19766-A-T-relock-vice-parts-list-relock-2-relock-8-rmh - Updated - 26-10-2022

Foundation

The ReLock vice is the foundation for a fully flexible vice system, with a multitude of interchangeable jaws, parallels or mill angles to suit your application.

Base vice - ReLock 2 or ReLock 8.

- SnapLock® Carrier Jaws - accepts both AccuSnap® and QuickChange™ Jaw systems.
- AccuSnap or QuickChange Parallels and Mill Angles - select the approach best suited to your application.

Flexibility

1 SnapLock Carrier Jaws

SnapLock carrier jaws allow mounting of AccuSnap and QuickChange master jaws by using an industry standard bolt size and pattern. Carrier jaws snap on and off the SnapLock knuckles in seconds.

2 3 AccuSnap and QuickChange Master Jaws

AccuSnap QuickChange master jaws easily mount to the SnapLock carrier jaws by using an industry bolt size and pattern. AccuSnap master jaws patented locking receptacle accepts all AccuSnap accessories.

4 5 AccuSnap and QuickChange Parallels

AccuSnap and QuickChange parallels are designed for a range of set up variations when you need to position a workpiece between hardened jaws. AccuSnap parallels snap in and out of the AccuSnap master jaws in seconds. QuickChange parallels slide into position via a dovetail slot and gib.

Also available:

Machinable Fixture Jaws

AccuSnap and QuickChange machinable fixture jaws can be customised quickly to fixture a wide range of workpieces. The jaws snap or slide in and out of the master jaws in seconds. Available in either aluminium or hardened steel.

SnapLock Reversible Machinable Fixture Jaws

SnapLock reversible machinable fixture jaws are the most versatile method of fixturing on the ReLock System. Customising options are endless. Jaws can be machined on two faces for additional set up. Manufactured from high quality aluminium.

Fixture Plate

Ideal for a wide variety of fixturing applications, such as holding many small parts or parts with difficult clamping or locating requirements. Fixture plates can be attached or removed in seconds and are offered in two widths. Manufactured from high quality aluminium.

Modular Workstops

AccuSnap modular workstops quickly mount to parallels in many different positions. As many as three stops can be mounted to a single parallel to accommodate multi-piece set-ups.

Universal Workstop

The universal workstop easily mounts to the side of the ReLock in numerous positions. Optional extension is available for larger workpieces.

Workstop Presetting Gauge

The AccuSnap workstop presetting gauge, in combination with a standard micrometer, allows you to precisely preset your modular workstop positions in relation to the X, Y, and Z machine datums.

Single Station Conversion Plate

The single station conversion plate quickly converts the ReLock from double station to single station vice for larger workpieces.

Initial Cleaning

After unpacking your vice and checking the contents, wipe all surfaces with a clean rag or cloth to remove any debris or rust inhibitor that is present. This will ensure that the vice will operate at its maximum efficiency.

Operating Instructions

Behind the rear knuckle (opposite the handle end) you will find two hex screws. One is to adjust the automatic offset mechanism (discussed later) and the other is to adjust the brake mechanism for the vice (see drawing A).

Tighten Brake Mechanism

Simply tighten the brake screw in a clockwise rotation until it is snug. **DO NOT OVERTIGHTEN.** Failure to set brake properly will:

- not allow vice to open and close properly and/or
- will not allow the automatic offset mechanism to operate correctly.

① Offset Mechanism

② Break assembly

Drawing A

Do not fully close vice without jaws properly mounted on vice knuckles.

The ReLock vice should only be fully closed when:

- a three piece SnapLock Machine Jaw Set is on vice
- a SnapLock Carrier Jaw Set and AccuSnap or QuickChange Master Jaw configuration is on vice

Failure to do this could result in damage to the centre chip shield.

Automatic Offset Mechanism

Behind the rear knuckle (opposite the handle end) you will find two hex screws. One is to adjust the automatic offset mechanism and the other is to adjust the brake mechanism for the vice (see drawing A on previous page). The automatic offset mechanism allows the user to set the distance that one jaw will break (i.e. open) before the next jaw breaks. The offset can be set to three distances: .030, .125, .250. The automatic part of the mechanism allows the user to change workpiece sizes without any further adjustment to the offset mechanism. For example: You set your offset to .250 and you are setting up a job that the workpiece is a 3" square then you switch to the next job where the workpiece is 4" square, the offset mechanism will automatically break the back jaw .250 for both workpieces. Similarly, you can change the offset for both jobs simply by turning the adjustment screw to the desired distance. This feature is especially useful in a horizontal machining centre application. This will prevent both workpieces from falling out of your fixture at the same time and allows you to set the distance.

Jaw Opening & Closing

When closing the vice, the front jaw (handle end) will open first. Once contact is made to the workpiece, the back jaw will move. When contact is made by the back jaw both jaws will tighten together to your desired pressure. **DO NOT OVER-TORQUE VICES.** Over-torqueing will cause damage to the vice and could cause harm to the operator.

Recommended clamping pressures:

4": 0-6,000 lbs. 6": 0-12,000 lbs. 8": 0-16,000 lbs.

Mounting Information

2-station Vices

This vice has two, standard mounting options:

1. The bottom of the vice has four (4) locating holes and four (4) cap screw holes for mounting. The cap screw holes can be accessed through the top of the vice. When SnapLock Jaws are mounted on the vice the cap screw holes are completely covered preventing any coolant, fluid or chips from entering the holes. This option will allow you to mount vices very close to each other without interference.
2. The other option is to utilise the slots on either side of the vice in conjunction with toe or strap clamps.

8-station Vices

All standard baseplates come with a 50mm centre bushing and edge locating. Please refer to catalogue for specific mounting specifications.

Maintenance and Cleaning

Like any piece of quality equipment, the ReLock vice will need to periodic cleaning and maintenance to prevent lock-up and ensure maximum efficiency. The entire side segment of the vice can be easily removed and replaced.

1. Remove all jaws and accessories from the vice.
2. Remove the two retaining screws on one of the ends (or top only of 8-Station Vice).
3. Loosen the brake mechanism to allow the segment to slide freely. Do not remove screw.
4. Use the SnapLock pry wrench to lift and slide the centre chip shield locking wings onto bed of vice.
5. Slide the entire segment out of the vice way.
6. Be sure to set the chip shields aside until needed for re-assembly.
7. Place segment on table or flat surface.
8. Use the vice handle to separate the two sections of the slide segment making sure that the segment does not turn with the lead screw.
9. Remove rubber seal from the lead screw and inspect for damage.
10. Completely clean all surfaces and holes from all coolant, fluids and chips.
11. Grease both the external and internal threads of the lead screw.
12. Remove the two screws from the handle end of the front segment and remove plate.
13. Push the lead screw through the front segment to expose thrust washers.
14. Grease all thrust washers, push front segment back onto lead screw and replace plate with screws.
15. Remove the screw from the top of each knuckle and grease the SnapLock plunger assembly.
16. Re-assemble plunger assembly.
17. Clean entire vice body especially the centre way before re-assembling vice.
18. Place seal back onto the lead screw making sure to push it past the threads.
19. Assemble two slide segment units back together by again preventing the segments from turning while screwing the lead screw back into the rear segment.
20. Once external threads are not visible, place the seal back into the slot provided by using a small screwdriver or tool. Make sure that the seal is properly installed. Failure to do this can result in damage to the vices' internal mechanisms.
21. Place the outside chip shields onto the proper knuckles. Shields are notched to fit only one end. Failure to do this will allow coolant and chips into the lead screw area and cause binding.
22. Slide rear segment into the vice.
23. Place the centre chip shield into the slot prying the wings onto the bed of the vice.
24. Slide the rest of the segment in to position making sure that the outside chip shields slide under the centre chip shield.
25. Replace retaining screws in vice.

This maintenance procedure should be done periodically.

The frequency of this procedure depends on how much you use your vice.

The ReLock 8-Station's compact and lightweight unibody design is perfect for horizontal machining centres. The unibody is manufactured from 80,000 psi ductile cast iron and the guide parts are flame hardened and precision ground to accuracies of $\pm 0,0005''$. It's also ideal for use with rotary indexers on vertical machining centre applications.

Single Station Conversion Plate

Easy mounting instructions for the Single Station Conversion Plate **19769** on a ReLock 8-Station vice.

Step 1

Crank bottom jaw toward centre of vice. Mount single station conversion plate **19769** to the back carrier jaw as shown.

Step 2

Crank bottom jaw down until the single station conversion plate touches baseplate. Mount the single station conversion plate to the baseplate.

ReLock 2 - with machinable soft jaws

Vice Clamping

19754

VICE CLAMPING

Material

Body: 80000 PSI ductile cast iron.
Sideways flame hardened to 40 HRC max.
Machinable jaws: aluminium.

Tips

Supplied with actuation handle, hex key and wrench.

Important Notes

All dimensions are in inches.

Technical Notes

Replacement parts available.

AccuSnap Jaws and Parallels

for use on SnapLock Jaw System for ReLock Vices

19810 - 19838
Clamping & Height Setting

- Fast, accurate and versatile.
- Reduces setup time drastically.
- $\pm 0,0002''$ repeatability.
- Adaptable to most vice systems.

Step 1:

Before mounting AccuSnap master jaws, thoroughly inspect, clean and remove any burrs or chips from the mounting surface.

Simply attach the AccuSnap master jaws to the carrier jaw system using the industry standard bolt system.

Step 2:

Snap in the parallels or soft jaws that you require for your set-up and begin machining. Two lock screws are provided for extra holding assurance, but are not necessary to hold parallels in place. Do not overtighten lock screws.

Step 3:

When finished with your job, unlock parallels (if needed) and turn the kick out screw to eject the jaw or parallel.

You are ready to repeat the process for your next job.

VICE CLAMPING

ov-W19810-A-T-W19838-A-T-accusnap-jaws-parallels-rmh - Updated - 26-10-2022

ReLock Accessories

Both the AccuSnap and QuickChange vice jaw systems can be used in conjunction with most vice systems.

SnapLock Machinable Fixture Jaws

Jaws can be attached, reversed, removed or indexed in a matter of seconds. The jaws are extremely versatile, allowing endless customising possibilities. Jaws are manufactured from steel and high quality aluminium.

SnapLock Carrier Jaws

Carrier jaws allow mounting of AccuSnap and QuickChange master jaws or standard bolt-on jaws using an industry standard bolt pattern.

QuickChange Vice System

QuickChange jaws slide into position via a dovetail slot, as shown. The system includes master jaws, parallels, V-blocks, mill angles and machinable soft jaws. Adaptable to most vice systems.

AccuSnap Vice Jaw System

The AccuSnap vice jaw system (pictured), shows master jaws and parallels being used for workpiece set-up. The AccuSnap system allows setup change-over in seconds with extreme accuracy.

AccuSnap Machinable Fixture Jaws

Ideal for many workholding options of smaller workpieces. Jaws are offered in two thicknesses, from either aluminium or pre-hardened steel.

AccuSnap Workstops

Easily mount to AccuSnap parallels in a variety of configurations. Provides extreme workpiece location accuracy and repeatability. Can be used in conjunction with the AccuSnap presetting gauge to accurately reference your X, Y and Z machine datums.

How to use the SnapLock Jaw System

19790-19862
Clamping & Height Setting

The SnapLock system's allows simple, quick changeovers between machinable and carrier jaws.

SnapLock Machinable Fixture Jaws

- Can be attached, reversed, removed or indexed in a matter of seconds.
- Extremely versatile, allowing endless customisation possibilities.
- Manufactured from high quality aluminium.

SnapLock Carrier Jaws

- Allows mounting of AccuSnap and QuickChange master jaws or standard bolt-on jaws using an industry standard bolt size and pattern.

Operation

Step 1

Align the SnapLock outer jaw over the appropriate ReLock vice knuckle

Step 2

Place the front edge of the jaw over the knuckle and press firmly down to "snap" into place

Step 3

Align the centre jaw over corresponding mounting and locating holes and fasten down with socket head cap screws

Step 4

For jaw removal, simply unbolt the centre jaw and slip pry wrench in slots of outside jaws as shown; pull back or sideways on the handle to release

19790

VICE CLAMPING

Material

Aluminium. Some sizes are available in steel (1018 or 4140), please call for details.

Technical Notes

Jaws are reversible for additional work-

piece setup.

For jaw capacity when used with vice, see technical pages.

Tips

Only for use with our ReLock Vice system.

Machinable Vice Jaws - SnapLock

for ReLock single station vices

Vice Clamping

19792

VICE CLAMPING

Material

Aluminium. Some sizes are available in steel (1018 or 4140), please call for details.

plate no. 19759 to convert 2 station ReLock vice into a single station vice. For jaw capacity when used with vice, see technical pages.

Important Notes

All dimensions are in inches.

Technical Notes

For use with single station conversion

Tips

Only for use with our ReLock Vice system.

Carrier Jaws - SnapLock

ReLock vices with AccuSnap & QuickChange master

19796

VICE CLAMPING

Material

Outside jaws: aluminium.
Centre jaws: steel.

Technical Notes

Carrier jaws can be used in conjunction

with AccuSnap and QuickChange master jaws.

Outside jaws can be used in conjunction with single station conversion plates.

Tips

Only for use with our ReLock Vice system.

Important Notes

All dimensions are in inches.

Master Jaws - AccuSnap

for use on SnapLock carrier jaws 19796

Vice Clamping

19810

VICE CLAMPING

Material

Body: 80000 psi ductile cast iron.

Technical Notes

Adaptable to most vice jaw systems. When

used with ReLock vice, mount AccuSnap master jaws to SnapLock carrier jaws to fit all AccuSnap jaw components. Install AccuSnap master jaws to SnapLock carrier

jaws on vice for squareness.

Important Notes

All dimensions are in inches.

Order No.	Vice size	Contents	l_1 ± 0.001	l_2	w_1 ± 0.0005	w_2 ± 0.0005	w_3	h_1 ± 0.001

12034

VICE CLAMPING

Material

Steel, hardened (HRC 52-54).

Technical Notes

Typically used in conjunction with pitbull

(part no. 12301) or Dynaforce (part no. 12010) clamps.

Allows aggressive clamping on as little as 1,5mm of material.

Tips

A further option includes an adaptor to suit 100mm and 150mm vices - see part no. 12035.

Order No.	d ₁	Grip height h ₂	h ₁	h ₃	l ₁	w ₁	A/F	Qty/pack	Weight g

12034.W0150	M 8	1,5 to 5,6	12.7	6.0	25.4	25.4	5	1	37

12035

Material

Steel, heat-treated.

Technical Notes

The vice jaws for the Talongrip clamps increase the functionality of your 100 and 150mm vices (4" or 6").

This is a simple bolt-on system that allows

you to perform aggressive machining operations whilst clamping on as little as 1,5mm.

Ideal for small batch sizes or when building a fixture is not economical.

Tips

Supplied with one jawstop (either part no.

12035.W0220 or .W0230 - see table) and for individual Talongrips (either part no. 12034.W0050 or .W0075).

Important Notes

Set includes a pair of vice jaws, four talongrip clamps and one stop (part no.12035.W0220).

12036.1

VICE CLAMPING

Material

Steel, hardened (HRC 52-54).

Technical Notes

The hardened grip has penetrating teeth designed to bite into the workpiece

preventing lateral and its horizontal movement.

These grips will even hold flame cut parts and parts with negative drafts.

Tips

A further option includes an adaptor to suit 100mm and 150mm vices - see part no. 12037.

Order No.	h_1	h_2	d_1	d_2	Grip height h_1	A/F	Qty/pack	Weight g
12036.W0175	9.5	5.9	19.1	M5	1,5 to 3,0	4	2	18

12036.2

VICE CLAMPING

Technical Notes

Designed for those aggressive operations on harder materials while providing the versatility to hold just about any shape. Standard gripping height (.200") or

elevated workpiece for cutter clearance around jaws by resting part on the original Versagrip gripper or custom made pucks in the Versa pockets. Rotatable, flat, serrated top face for additional holding force in

horizontal pockets in jaws or hard stops.

Tips

Max. vice torque per pair of grips - 6" vice: 35-40 Lb/Fts (47,5-54,2 Nm.).

Order No.	h_1	h_2	h_3	d_1	d_2	d_3	d_4	l_1	Qty/pack	Weight g

12037

VICE CLAMPING

Material

Steel, hardened (52-54 HRC).

Technical Notes

The Versagrip jaws increase the functionality of your 100 and 150mm vices. This is a simple bolt-on system that allows you to perform aggressive machining operations

whilst clamping on as little as 1,5mm for irregular shaped parts.

Ideal for small batch sizes or when building a fixture is not economical.

Tips

Has penetrating teeth designed to bite into your workpiece to prevent lateral and horizontal

movement. They will hold flame cut parts, castings and even parts with negative draft.

Important Notes

Set includes a pair of vice jaws, and four Versagrip clamps, part no. 12036.W0175.

91000

Material

Standard pilot cone type:

Supplied with standard HSS blade of 14. cutting angle.

CRN pilot cone type:

Supplied with HSS TIN coated blade of 20. cutting angle.

Technical Notes

Consists of four main elements;

1. Body and drill attachment spindle.
2. Pilot cone - unique to the desired chamfer, provides full support during cutting and ensures concentric chamfer.

3. Blades - 1 x HSS blade at 14. cutting angle supplied.

4. Blade adjustment lock nut.

The CRN pilot cone type gives better results for harder materials and/or larger batches as these have a higher hardness rating and lower friction characteristics.

Tips

Used to achieve high quality concentric chamfering quickly and easily, without risk of damage/cutting into workpiece.

Recommended cutting speed= 10 - 20 m/

min. For hand drill chamfering tool we recommend a cutting speed of 3 - 40 rpm. Available with attachment spindles to suit most pillar drills, CNCs or hand drills. Chamfer angle quoted is inclusive angle.

Important Notes

To extend the life of the blade and pilot cone we recommend lubrication with cutting fluid or soluble oil.

On initial set-up, make minor height adjustment of pilot cone via the blade adjustment lock nut to ensure best possible positioning.

Order No.	Pilot cone type	Chamfer dia. min. max.	Inc. chamfer angle °	Attachment spindle	d ₁	d ₂	l ₁

Inner Chamfering Tools

for drill attachment

Chamfering Tools

CHAMFERING TOOLS

91002

Material

HSS: high speed steel, for most standard materials.

HSS TIN: high speed steel with TIN coating for difficult to machine materials such as stainless steel, titanium and Inconel.

Carbide: for hard materials.

Technical Notes

A blade with a 14. cutting angle is the most commonly used as it covers the widest range of standard materials, please see material suitability table for further advice.

Important Notes

Recommended cutting speed= 10 - 20 m/min. To extend the life of the blade and the pilot cone we recommend lubrication with cutting fluid or soluble oil.

Material

Standard pilot cone type:

Supplied with standard HSS blade of 14. cutting angle.

CRN pilot cone type:

Supplied with HSS TIN coated blade of 20. cutting angle.

Technical Notes

Consists of four main elements:

1. Body and drill attachment spindle.
2. Pilot cone - unique to the desired chamfer, provides full support during cutting and ensures concentric chamfer.
3. Blades - 1 x HSS blade at 14. cutting angle supplied.
4. Blades adjusted lock nut.

The CRN pilot cone type version gives better results for harder material and larger batches as these have a higher hardness rating and lower friction characteristics.

Used to achieve high quality concentric chamfering quickly and easily, without risk of damage/cutting into the workpiece. The specially designed pilot cone provides full support to the blade throughout cutting and ensures a concentric chamfer.

Available with attachment spindles to suit most pillar drills, CNCs or hand drills. Chamfer angle quoted is inclusive angle.

Tips

Recommended cutting speed= 10 - 20 m/min.

To extend the life of the blade and the pilot cone we recommend lubrication with cutting fluid or soluble oil.

On initial set-up, make minor height adjustment of pilot cone via the blade adjustment lock nut, to ensure the best possible positioning.

Important Notes

For replacement blades see part no. 91022.

Order No.	Pilot cone type	Chamfer dia. min. max.	Inc. chamfer angle	Attachment spindle	d ₁	d ₂	l ₁

CHAMFERING TOOLS

91022

Material

HSS: high speed steel, for most standard materials.

HSS TIN: high speed steel with TIN coating for difficult to machine materials such as stainless steel, titanium and Inconel.

Technical Notes

A blade with a 14. cutting angle is most

commonly used as it covers the widest range of standard materials, please see material suitability table for further advice.

Tips

Recommended cutting speed= 10 - 20 m/min. To extend the life of the blade and pilot cone we recommend lubrication with cutting fluid or soluble oil.

Wixroyd chamfering tools are mainly used as drill extensions to add high quality, consistent inner and outer chamfers. The chamfer angles achievable on a wide range of metals are between 60° to 120° inclusive.

Construction

- Concentric chamfers.
- Excellent surface finish.
- Reduces risk of cutting into the workpiece.
- Controlled machining torque.

Chamfering tools consist of three main elements: an attachment spindle, pilot cone and cutting blade.

A variety of spindle attachments are available from CM1 to CM3 inclusive.

1 When the chamfer tools spindle is lowered, it's pilot cone firstly centres the workpiece before retracting to allow the blade to come into contact with the material and start cutting of the chamfer.

2 Adjusting the output of the blade controls the thickness of the chip count NOT the value or angle of the chamfer e.g. with a blade protrusion of 0,1mm the chamfering tool requires 10 revolutions to cut 1mm of the chamfer.

3 Concentric chamfer achieved.

Our chamfer tools act by gradually shaving material away from a right angled corner to create a transitional, angled edge between two planes.

Example: with a blade protrusion of 0,1mm the device will make 10 revolutions to cut 1mm.

ov-W91000-A-T-W91022-A-T-chamfering-tools-a-rmh-Updated -27-10-2022

Recommended Cutting Speed

Typical rpm for varying chamfer diameters, when using cutting speed of between 10 and 20 m/min.

We recommend a cutting speed of between 10 and 20m/min.

Therefore typical value for chamfers of varying diameter are as follows.

Diameter	RPM range
10 mm	320 to 640 rpm
15 mm	210 to 420 rpm
20 mm	160 to 320 rpm
30 mm	110 to 220 rpm
40 mm	80 to 160 rpm
50 mm	55 to 110 rpm

We do however recommend you use the following formula to check the most suitable rpm used.

$$Rpm = (\text{cutting speed} \times 1000) / (\text{diameter} \times 3.14)$$

Blade cutting angle	0°	14°	20°	25°
Suitable for material	Brass, bronze, cast iron, stainless steel	Steel, special bronze, perspex	Soft steel, copper, AU 4G, plastic, stainless steel	Aluminium, soft iron, sheet metal

Important Note:

We recommend the chamfering tool is lubricated with cutting fluid or soluble oil to ensure the long life of the cutting blade edge, and to reduce wear of the pilot cone.

We offer blades with a variety of cutting angles to best suit the material in which a chamfer is required.

Typically a blade cutting angle of 14° suits most applications; please refer to table above.

Hook Spanners - with Hook Nose hinge type - traditional

95100

Material

Steel (C35/C45), hardened, blackened, or stainless steel.

Technical Notes

Hook Spanners - with Hook Nose hinge type - long version

95110

Material

Steel (C35/C45), edgewise ground, hardened.

Available in steel (blackened or nickel plated), or stainless steel.

Technical Notes

Spanners for adjustment of nuts to DIN

1804, DIN 981 and DIN 11851. Extended hook and shank, strengthened rivet, spring washer.

Rounded edges for better handling.

Tips

The long version spanner allows greater torque to be applied.

95151.W0230	155-230	8.0	420	8	18	1015

Hook Spanners - with Pin Nose hinge type - long version

95152

Material

Steel (C35/C45), tempered, hardened, blue finish or nickel plated. Edgewise ground.

circumferences to DIN 1816.

Rounded edges for better handling. Sizes 16-22 without retaining ring.

Technical Notes

For round nuts with set pin holes on outer

Tips

Longer handle shaft (l_1) enables higher torque to be applied.

Adjustable Face Spanner

with replaceable pins - for torque socket wrench

95352

SPANNERS & HOOK SPANNERS

Material

Special steel, hardened and blackened.

Technical Notes

Replaceable, hardened pins.

Pin diameter = nominal diameter -0,1mm (tolerance class h12). See part 95360 for replacement pins.

For use with torque wrench, for more accu-

rate installation and adjustment.

The required torque wrench value is dependent upon dimension l_2 . Please refer to the operating manual of your torque wrench.

97100

SPANNERS & HOOK SPANNERS

Material

Body: anodised aluminium (high wear resistance).

Technical Notes

The Posi-stop replaces all forms of distance

sleeves and soft jaws normally used when turning short workpieces. They mount securely against the chuck face using three strong magnets and provide a fixed reference surface.

Tips

* w_1 - standard width jaw is 25mm, this can easily be milled or sawn larger for chucks with wider jaws up to 54mm.

97100 Posi-Stops

Chuck “Posi-stops” provide a quick and accurate method of moving workpieces away from the face of the chuck. Often used to enable the workpiece to be machined more closely to its extremity or for shorter workpieces.

Each posi-stop has strong magnets on the bottom face so that the stop snaps firmly over the chuck jaws and onto the chuck face. There are five standard thicknesses; 15, 20, 25, 30 and 35mm (accuracy $\pm 0.01\text{mm}$) or they can be purchased as a set.

The posi-stops are made for a standard jaw width of 25mm but they can easily be opened up (mill or saw) to accommodate wider jaw widths.

97103 Chuck Puck

Chuck plug easy to install - just squeeze into the chuck hole.

Prevents build up of swarf and coolant, reduces vibration as well as wear of the chuck and spindle.

97104 Bore Plug

Prevents swarf accumulation and associated damage in non-active boring bar holders.

97050

SPANNERS & HOOK SPANNERS

Material

Hook and guard: steel.
Handle: wood.

Technical Notes

Excellent for removing swarf or chips from in and around workpieces for mills and

lathes. Extended hook minimises risk to operator.
Part number 97050.W2050 has rigid fixing (brazed-soldered).
All other parts have flexible fixing (rubber).

Important Notes

Take all necessary safety precautions when using this product in or around working machinery. If in doubt shut down machine.

Non-Rebound Mallets - Complete with nylon inserts

Mallets & Hammers

98301

MALLETS & HAMMERS

Material

Housing: steel, shot filled.
 Inserts: nylon, made from extruded tube material.
 Handle: wood, fibreglass or steel. Steel and fibreglass handles include rubber grip.

Technical Notes

Shot filled housing results in a non-rebound action and assists in full transmission of impact force.
 Inserts are replaceable.

Tips

Both handle and inserts can be replaced.
 For replacement items see;

98381

Material

Housing: malleable cast iron.
Handle: hickory wood.

Inserts: superplastic, white. Medium hard.
Splitting Maul: carbon steel, drop-forged and hardened, with turned nose.

Technical Notes

Two tools in one; splitting maul for wood

harvesting and soft face mallet for hammering stakes and fencing posts.

Tips

Simplex maul mallets are a flexible modular system with replaceable handle, housing and inserts. Suitable replacement items for Simplex maul mallet 98381 are;
- handle no. 98383

- housing no. 98382
- inserts no. 98384

Important Notes

Do not strike steel with the splitting insert - can result in splintering and injury. Use only original Wixroyd Simplex Mallet parts when replacing handle or inserts.
