

37360

THUMB SCREWS

Material

Turned and burnished steel, blackened.
Tensile strength class 5.

Technical Notes

These knurled knobs are used when quick

tightening is required and with only a slight clamping force. The knob is inserted obliquely on the threaded stud and then placed in the axial position so that it fits onto the stud threads. At this point it can

be locked with just a slight rotation.

Order No.	d_1	d_2	d_3	d_4	h_1	k	Weight g
